## PREFACE

The 1972 edition of the *Canada Year Book* continues a long series of annual publications giving authoritative statistical and other information on many of the measurable phases of Canada's development. The Year Book has, through the years, summarized the statistical data made available by Statistics Canada and presented it along with legislative and other pertinent information to give concisely, within the covers of one volume, the story of Canada's social and economic progress.

The volume purposely retains the same format and subject-matter coverage each year for ease of reference. The latest information obtainable at the time of preparation is included in each chapter; however, because the production process extends over a number of months, by the time the volume is off the press later data on some subjects may have become available and can be secured from the appropriate Statistics Canada Division or Government Department, as indicated in the footnotes or in the Directory of Sources of Official Information in Chapter XXVI. It should also be recognized that only basic statistical data are included in the Year Book and that, on most subjects, much greater detail can be secured from the source.

In the current volume, in addition to the normal updating of all subject matter, feature articles or specially prepared chapter material have been included on: "Regional Geography of Canada", pp. 1-26; "Structural Changes in Tertiary Education in Canada", pp. 370-377; "Trends in the Number of Manufacturing Establishments", pp. 768-778; "The Role of Government in the Grains Industry", pp. 1021-1028; and "The Canada-United States Automotive Products Agreement", pp. 1058-1069.

The volume was produced in the Year Book Division of Statistics Canada by Margaret Pink, Assistant Director and Editor of the *Canada Year Book*, and the Year Book staff, under the direction of Pierre Joncas, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by the Drafting Unit of the bureau. Credits for photographic illustrations used throughout the publication are listed on pp. v and vi.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of Statistics Canada in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the public service concerned.

## INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of 2,000 pounds is meant.

### Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 Imperial pint=20 fluid ounces	1 short ton=2,000 pounds
1 U.S. pint=16 fluid ounces	1 long ton=2,240 pounds
1 Imperial quart=40 fluid ounces	1 barrel crude petroleum=35 Imperial gallons
1 U.S. quart=32 fluid ounces	1 ounce avoirdupois=0.91146 ounce troy (oz.t.)
1 Imperial gallon=160 fluid ounces	1 statute mile=5,280 feet
1 U.S. gallon=128 fluid ounces	1 nautical mile=6,080 feet.
1 Imperial proof gallon=1.36 U.S. proof gallon	

### Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

### Miscellaneous

Maritime Provinces=Prince Edward Island, Nova Scotia and New Brunswick  
Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick  
Central Canada=Quebec and Ontario  
Prairie Provinces=Manitoba, Saskatchewan and Alberta  
Btu.=British thermal unit (coal)  
Mcf.=thousand cubic feet (gas)  
n.e.s.=not elsewhere specified.

### Symbols

The interpretation of the symbols used in the tables throughout this publication is as follows:—

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed or where “a trace” is meant.
  - ᵖ preliminary figures.
  - ᵣ revised figures.

## Regional Geography of Canada\*

Canada's geography is complex. In the large area of 3,851,809 sq. miles of land and inland lakes there is a variety of distribution patterns of physical conditions and man-made features. In order to help comprehend the similarities and differences from place to place across this vast area, geographers divide the country into smaller units within which understanding becomes more manageable.

These regions should have some degree of internal similarity based on selected criteria. The selection of these characterizing criteria and the size of the resulting regions are subjective decisions based greatly on the experience of individual geographers with the variety of landscapes across Canada. The concept of geographical regions has a hierarchy of units which increase in size and complexity. Every valley and every village has its own geographical character; in theory, a study of each of these small units should lead to understanding of the geographical patterns of Canada as a whole. The joining together of a number of small units into larger regions depends on the purpose and scale of the study and becomes a matter of personal choice. Regional geography is not how one *begins* to study a country; it is an end result of having compared and analysed geographical patterns throughout the country and its parts.

For purposes of this presentation, which is limited in length, six regions of Canada have been chosen. The regions are well known to Canadians and therefore have the advantages of local familiarity and national recognition. The criteria for defining them are not always the same—some are mainly landform areas, and some are groups of political units

\* Prepared by Dr. J. Lewis Robinson, Professor of Geography, University of British Columbia, Vancouver, B.C.

which are just as "real" as mountain ranges. On a broad scale, one needs more specific regional terms than "eastern", "western" or "northern" Canada, which mean different things to different people depending on where they are at the time. To the people of the Prairies and British Columbia, Ontario and Quebec are "eastern"; Kirkland Lake, for example, is probably "northern" to most people in Ontario, but it is at the same latitude as Vancouver which considers itself to be "southern".

**The Atlantic Provinces** are a politically based region, which includes the Maritime Provinces and the Island of Newfoundland; the Labrador section of Newfoundland is placed in the Canadian Shield region, an area with which it has similar environmental and resource-use characteristics. The Atlantic Provinces are known to Canada statistically for their lower incomes, their less expanding economy and their independent people. As a landform region, the Atlantic Provinces are within the northeastern Appalachian Mountains system, a system that also extends across southeastern Quebec to Gaspé peninsula. This latter area is often "lost" in a regional discussion because it is far from the core areas of southern Quebec.

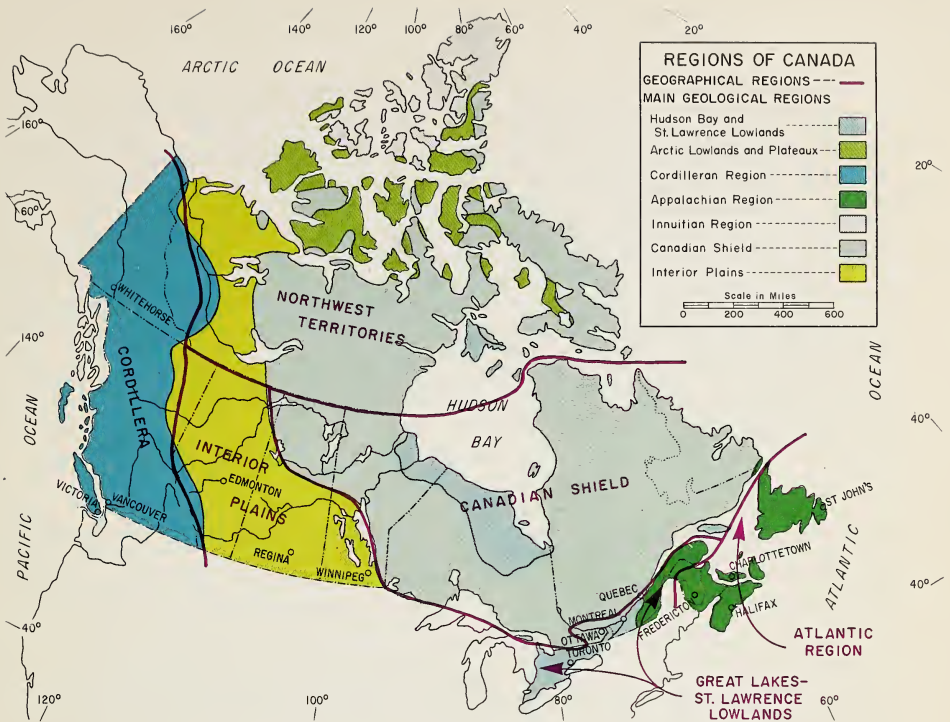

**The Great Lakes-St. Lawrence Lowlands** are defined on the north by the geological boundary of the Canadian Shield, an escarpment that is quite distinct and visible in the landscape. This landform feature is a useful regional boundary which separates the agricultural and urban characteristics of the Lowlands from the forested and sparsely populated Shield. The Lowlands region has the highest densities of industry and population in Canada and is known as the "heartland" of the nation.

**The Canadian Shield** is another landform region, and defined on the basis of its exposed Precambrian rock base. Its physical environmental characteristics of bare rocks, forests and lakes are quite distinct from the Lowlands. It is a huge area, covering about half of the mainland of Canada. The northwestern part, although having the same general geology, has a different surface environment and different human use and therefore is discussed here as part of the Northwest Territories.

**The Interior Plains** are sharply bounded on the west by the high wall of the Rocky Mountains, but the geological and landform line of the Shield on the east is often hidden beneath former glacial lake deposition or by coniferous forest. The plains are the largest area of nearly level land in Canada and are known for their distinctive large grain farms. Although there is some logic in treating all of the Prairie Provinces as a political region, the environmental and economy characteristics of the old hard-rock areas of northern Manitoba and northern Saskatchewan are very different from the southern plains; the northern parts of those provinces may be better understood by considering them as part of the similar environment and economy of the Canadian Shield.

**The Cordillera** is a distinct mountainous region which coincides closely, but not entirely, with the political limits of British Columbia and Yukon Territory. This landform boundary places the level parts of northeastern British Columbia in the Interior Plains, emphasizing its differences from the rest of British Columbia. The Cordillera is characterized by great contrasts in the elements of the physical environment within small areas and also by internal contrasts in population densities. It is debatable whether the Yukon should be considered as part of the mountainous Cordillera with a Pacific outlook, or should be studied for its "northern" characteristics and grouped with the Northwest Territories.

**The Northwest Territories** have no landform or other environmental uniformity. To describe this political unit as a region raises some geographical questions. Will the population distribution and sparse economy of the Mackenzie Valley be better understood by emphasizing its similarities with the northern Interior Plains of which it is a landform extension, or by thinking of the Territories as a political unit *separated* from southern

Canada by the sparsely populated northern parts of the provinces? Is Keewatin District, for example, part of the Canadian Shield region, which it is geologically, or is it separated from the Shield geographically because of its treeless environment, arctic climate and Eskimo inhabitants?

These and other questions have been considered prior to selecting the six regional divisions. Undoubtedly, the geographical diversity of Canada could be better illustrated by selecting 10 or 20 regions, but in so doing there would be danger of losing sight of the aspects of similarity and the "wholeness" of Canada. This brief regional geography of Canada is meant not only to characterize the landscapes and economies of particular parts of Canada but also to see them as components of the whole country.

Regional Geography is *not* a collection of miscellaneous information about a region. Undoubtedly facts are necessary to describe a region accurately, but facts are neutral—they do not in themselves constitute a discipline. It is the selection, arrangement and interpretation of these facts that present a viewpoint which can be defined as geographical (or historical, economic, sociological, political or other such viewpoints). Just as in history, for example, there is a selection of facts during a period of time, so in geography there must be a selection of facts about areas. Few facts are included in this article because the intention is to present a geographical characterization and interpretation of a variety of facts. A selection of some of the basic facts is given on pp. 27-41, and in previous Year Books, and the distributional aspects is recorded in the new *Atlas of Canada* and in the various provincial atlases which have been published in the past 15 years.

Geography seeks to describe and explain as much of the totality of a regional landscape as is possible. A landscape is made up both of the natural (physical) environment (that is, "nature" with little change made by man) and also the distribution patterns of man-made features. Geography is concerned with the arrangement and relationships of these natural and human features, and it looks for order and repeated pattern in the landscape.

These patterns are, of course, *not* permanent; they change both over time and in area. Thus, there are regional geographies of the last century which are not the same as the present. Large areas of Canada have similarities in certain elements of their landscapes and, by grouping these selected similarities into regional units, the "character" of a region may be defined and its differences from other regions clarified. Many people have a "regional consciousness" which tells them intuitively that their local area differs in certain aspects from some distinctive characteristics of nearby or far-off regions; it is one of the tasks of regional geography to identify and define these characteristics more accurately. At the same time, as people travel more about Canada, they realize the similarities that may be seen from place to place; thus, comparing similarities in regions is equally as important as defining differences. Each Canadian probably has a different view of the "totality" of Canada, for no one can know everything about each region. The purpose of regional geography is to assist, along with other disciplines, toward the goal of understanding as much as possible about Canada in whole and in part. By definition, however, regional geography must be focused on the geographical aspects of the country.

### The Atlantic Provinces

By most economic and statistical measurements of regional development, the Atlantic Provinces rank at or near the bottom among Canadian provinces. It has been called the region that "has been passed by"; it is the neglected part of the country, according to many local residents. One of the purposes of regional geography is to look at the *internal* patterns of these economic indicators to see if there are areal differences. Such analysis reveals that it is misleading to think of the whole region as being "underdeveloped" because some centres and areas are in fact as prosperous as other parts of Canada and it is only in specific sections that poverty is concentrated. There is, therefore, a sub-regional geography of poverty which needs to be understood when characterizing the economy of the Atlantic Provinces.

As a part of Canada, other characteristics of the Atlantic Provinces differ from the rest of the country. Its low, linear mountains and rugged, indented coasts are different landform types than those of the St. Lawrence Lowlands. The maritime climate of the Atlantic Provinces is not the same as that of the rest of Eastern Canada and it differs from the maritime climate of the West Coast. Although its trees are similar to those growing elsewhere in Eastern Canada, the way in which they are spatially associated permits classification as a separate vegetation region. Resource-based occupations are more important in the Atlantic region than they are in southern Ontario and Quebec. Although the individual farms, villages, towns and cities are similar in form and function to other settlements in Canada, their geographical dispersal in small areas, strips and centres gives the region different geographical patterns of settlement and human use.

In addition to noting the characteristics that distinguish the region from the rest of Canada, regional geography should also analyse the areal associations of various elements within an area. The form and distribution of landforms, for example, are directly associated areally with the bedrock geology. The folded, linear geological structures of the Atlantic region are part of the Appalachian system of folded mountains, ridges and valleys which occupies eastern North America. Horizontal strata of Carboniferous age are one of the reasons for the lowlands of eastern New Brunswick, all of Prince Edward Island and northern Nova Scotia. On a smaller scale, the linear Annapolis-Cornwallis valley has been eroded out of the softer rocks of Triassic age. In contrast, the rugged and hilly areas of central New Brunswick are underlain by the ancient volcanic rocks of Devonian and Ordovician ages. Similarly, the low, rough hills of central Nova Scotia consist of hard rocks of Devonian and Precambrian geological periods.

The climate has sub-regional contrasts in its areal patterns. Near the coast the climate has typical maritime characteristics, but inland it is a continental type similar to the nearby parts of Eastern Canada. Cool coastal summers are due mainly to the southward-moving cold Labrador ocean current which is alongshore of eastern Newfoundland and

Nova Scotia. The cool air passing over this cold water is not carried far inland, however, and interior valleys become warm to hot during summer days. These regional differences in average summer temperatures have implications for agriculture and also for the use of the land by tourists. The winter climate of the interior parts of the region is similar to that of adjoining Eastern Canada because cold air masses affect all of the area in their general west-to-east movement across southeastern Canada and northeastern United States. The coldest areas are in northwestern Newfoundland and in the hills of northern New Brunswick. On the coast, owing to the extent and duration of ice-cover, the winter climate and man's activities in Newfoundland are different from those near the ice-free water of southern Nova Scotia. Geographers always keep in mind that there is a hierarchy of areal scale in their generalizations. Thus, in addition to the sub-regional differences between coastal and interior climates, there are micro-climates of local areas which are associated more with landforms. Hills are cooler in summer and winter and receive more precipitation than lowlands. River valleys therefore have different climates than nearby hills.

Other elements in the physical environment of the region have distinct areal patterns of distribution. Deciduous trees, for example, are more common in the warmer valleys and lowlands of New Brunswick whereas barren areas are more frequent in the cool and glaciated central plateau of Newfoundland. Coniferous trees are common throughout the region, but the *number* of species is greater in the southwest than in the northeast. Soils are sensitive to all variations in the natural environment; they emphasize the interrelatedness of the total physical environment both in processes and in areal relationships. The

*The community of Little Bay Islands, tucked around a snug harbour in Notre Dame Bay, is typical of the fishing villages along the rugged and forbidding north and eastern coastline of Newfoundland.*

George Hunter

character of the flood-plain soils of the Saint John or Annapolis river valleys, for example, is different from the glacial and marine deposition of eastern New Brunswick or the red soils derived from Carboniferous-age rocks of Prince Edward Island. This brief example of the ecological approach in regional geography has been in common use for many decades, long before the current interest in the "ecological crisis".

The distribution patterns of human activities and settlements in the Atlantic Provinces are equally as distinct as the areal patterns of environmental phenomena. The important resource-based activities and occupations are closely related to the natural environment from which the natural resource is obtained. Obviously, forestry activities will be located where there are usable forests, but only in *certain* forested areas where water, rail or road transportation has been added. Fishing is coastal, of course, but the coasts show areal variations in the intensity of fishing use and in the concentration or dispersal of fishing settlements; some inlets and bays are fully occupied and others have little fishing activity. The distribution of mines is related to areal differences in bedrock geology; for example, the Carboniferous rocks of the lowlands are sources of bituminous coal, salt and a little petroleum and natural gas, whereas the hard igneous and metamorphic rocks of the uplands may contain such metallic minerals as gold, lead and zinc. These human-use geographical patterns in all regions are the result of complex internal and external influences and decisions. Although the physical environmental base of the resource activity changes very little, the weight and value of these external influences are continually changing. The distribution patterns of economic activity are not stable; geographical change is characteristic of all regions.

Forestry activity has distinct geographical patterns. An analysis of distribution patterns of sawmills and pulp and paper mills in the Atlantic Provinces can illustrate some principles of industrial location that can be used to study distributions elsewhere in Canada. The sawmills of New Brunswick and Nova Scotia were originally located on rivers in the nineteenth century because water was the cheapest and most convenient means of transporting logs. In addition, because lumber products were for export, many sawmills were placed at river mouths or other places accessible to ocean shipping. As road and rail transport became increasingly available, the need for river location decreased. The availability of the natural resource is still significant in the distribution pattern, however, as illustrated by the fewer sawmills on Prince Edward Island which is more than half cleared for agriculture, or on Newfoundland Island where two thirds of the land is barren of trees. Because pulp and paper mills produce mainly for export, they also have a peripheral location pattern, usually at or near river mouths. In the past, the rivers were used more for pulpwood transport than they are now but the river water is still important in the pulping process. The distribution of cities is partly related to forestry. Certain towns, such as Grand Falls in Newfoundland, Dalhousie, Edmundston and Newcastle in New Brunswick, and Liverpool and Sheet Harbour in Nova Scotia, are almost entirely dependent on the pulp mills for employment. Although they are distinct urban entities within the Atlantic region, internally these "one-industry" towns differ very little in appearance from some resource-based towns of the Canadian Shield or the Cordillera.

The areal patterns of agriculture have changed over time. As farming became more commercial, the subsistence farms once located on the poorer soils, steeper slopes and away from main roads were abandoned; the distribution of commercial farms became much more closely associated with improved roads and access to the larger cities. This trend produced a pattern of narrow strips of farmland in New Brunswick and Nova Scotia. All of Prince Edward Island, because of its small area, narrow shape and lack of landform barriers, could be easily served with roads and therefore agriculture spread throughout the Island. But even on the small island there are sub-regional differences in the amount of forest clearing, with the eastern sections having more woodland remaining than the central parts. Agriculture never became significant in Newfoundland's economy. Its cool summer climate and lack of coastal soils did not provide a suitable physical environment, and in the past it did not have a road or rail network to move food products to

Malak

markets. "Farms" tended to be gardens and their distribution coincided with the location of the small fishing villages.

The farms in the rural landscape of the Maritime Provinces are quite similar to those of other parts of Eastern Canada. Its livestock economy, with much of the land in pasture, hay and feed grains, is a similar land use to that of most farmland in Quebec and Ontario. Thus, the regional character of agriculture in the Maritimes does not stem from its type of farm or general land use, but is distinguished by the distinct shape of its farmland strips and its areal dispersal.

The geography of fishing activity indicates a changing distributional pattern from dispersal to concentration. In Newfoundland mainly, but to a lesser extent in Nova Scotia, the small fishing "outports" or villages were dispersed along the coast in sheltered bays, near headlands or on islands—that is, in particular sites where the small family groups had access to the natural resource—the migrating fish. Because each family wanted space for drying flakes, separate wharves, and adjoining gardens—all with shore location—these fishing villages developed peculiar dispersed patterns of housing. The visual form of these villages was different from other resource-based settlements in Canada and those that remain constitute one of the elements in the total landscape that gives regional character to the Atlantic region. However, this pattern of dispersed fishing village settlement is changing rapidly in Newfoundland and has almost disappeared in New Brunswick and Nova Scotia. Fishermen are now concentrating in towns near the processing or freezing plants where there are more health, education and social services. This accelerating trend toward a general concentration of people and activities into fewer and larger places is similar to the areal patterns evolving elsewhere in Canada.

One of the distinguishing characteristics of the Atlantic Provinces is the relative importance of its resource-based economy and a scarcity of large cities. As already noted, the distributional geography of resource-based activities and the settlements that depend on them is generally coastal. These settlements are usually small, each having a population of from 5,000 to 10,000 persons, and are often dependent on only one resource. The few larger cities, Halifax–Dartmouth, Saint John, St. John's, Moncton, Sydney and Fredericton,

are those in which a variety of manufacturing, transport, port, commercial, government and service functions take place. Although their sites and settings are obviously different, their internal urban landscapes are quite similar in many ways to those in cities elsewhere in Canada and are not, therefore, elements of differentiation. It is true that the closely packed streets of gaily painted frame houses in old St. John's are unique in Canada, but the streets of new bungalows near Memorial University could be found in any city of Canada; and although the architecture of some brick buildings in Halifax is different, its new high-rise office buildings and strips of commerce along the streetcar lines are duplicated in most other Canadian cities.

What the region lacks is a very large urban centre that could be a concentrated consumer market for local manufactured products. If the geographical patterns of the population in the Atlantic Provinces showed a concentration of more than half of its people, and associated urban activities, in one small area (similar to the geographical patterns and relationships of Vancouver to British Columbia), could one predict a more healthy internal economy for the Atlantic region? If it is said that we should be able "to learn from the repetition in history", one can therefore suggest that we should also be able to learn something from comparative geography.

### The Great Lakes-St. Lawrence Lowlands

The lowland extending across southern Ontario and southern Quebec is the smallest region in Canada but holds more than half of Canada's population and produces about three quarters of its manufactured goods. This small region of Eastern Canada has more large cities of over 100,000 population than any other equal-sized part of the nation. Its excellent agricultural lands help to feed the nation's two largest cities—Montreal and Toronto. As a geographical region, the Great Lakes-St. Lawrence Lowlands are "the heartland" of the country, characterized by high densities of urban, industrial and agricultural activities.

The Lowlands have internal sub-regional contrasts that are the result of cultural differences between French-Canadian settlement of southern Quebec and settlements of British-origin peoples of southern Ontario. The rural landscape of southern Quebec, with its long, narrow farms and linear villages, is distinct within Canada, and contrasts with the rectangular farms and dispersed farmhouses of southern Ontario. The rural villages of Ontario, with their small, compact, central areas of commercial buildings, contrast with the Quebec villages in which residential and commercial uses are often interspersed along the streets. Although the Ontario and Quebec sections of the small Lowlands region have notable contrasts, they are also interdependent. For example, each is the best customer for the other's manufactured products.

The lowland region lies south of the sharp geological and landform boundary of the Canadian Shield, occupying the peninsula of southwestern Ontario between lakes Huron and Ontario and extending eastward in a narrowing plain along the St. Lawrence River to Quebec City. On a regional scale, the Lowlands could be described as flat or gently rolling but, as in other regions, there are areal variations in the character of micro-landforms at the sub-regional scale. These minor features are the result of two geological structures and three general types of glacial deposition. Two landform features, which are the surface configurations of bedrock geology, are the Niagara escarpment crossing southern Ontario and the Monteregian Hills of southern Quebec. Both of these minor landform features affect the type of agriculture nearby and are significant elements in the regional landscape.

One of the regional characteristics that distinguishes the Great Lakes-St. Lawrence Lowlands from the rest of Canada is its climate. In summer, hot and moist air masses often spread northward from the Gulf of Mexico and move northeastward across southern Ontario resulting in several days of high heat and humidity. Average monthly July temperatures rise to more than 70°F., making it warmer than any comparably large area of Canada. Such temperatures, plus a long frost-free season of 150 to 175 days, favour

the growing of several crops that cannot be produced elsewhere in Canada. Except in the southwest section, winter temperatures differ little from those experienced in other parts of Eastern Canada because many of the interior cold air masses move southeastward from the Prairie Provinces to the Great Lakes-St. Lawrence Lowlands. Because these cold air masses reach southwestern Ontario less frequently, its January average temperature of 25°F. is higher than that recorded in southern Quebec.

In this region of warm summers and mild winters, the belt of deciduous trees across southern Ontario was unique in Canada, but most of this hardwood forest has now been removed by agricultural clearing. The trees that remain are part of the Mixed Forest (deciduous and coniferous) which also covers the southern part of the Canadian Shield and extends into the Maritime Provinces. The beautiful autumn colours of this forest are a visual part of the landscape of most of the settled parts of all of Eastern Canada and are not confined to any one region.

Many other elements in the natural environment of the Great Lakes-St. Lawrence Lowlands are not distinctly different from adjoining regions, and this same environment extends south into the United States. It was the *combination* of these physical conditions, together with their geographical location, that presented such a favourable environment for people looking for agricultural land in the nineteenth century. The region had the largest area of level land with a warm summer climate in Canada, and it was accessible by way of the St. Lawrence River to settlers entering from the east. Although the physical environment may be of less significance in the technology of today's farming, it was important in attracting and holding agricultural settlement during the past century. The region became the largest and most productive agricultural area in Canada before 1900, and continues to provide food for the cities that grew within it in this century.

*The Niagara Peninsula lowland is one of the most intensively farmed areas in Canada, producing a great variety and abundance of food products for the large concentrations of population nearby as well as for shipment to more distant markets.*

George Hunter

In general, the crops grown in both southern Ontario and southern Quebec are similar. Each has a high percentage of agricultural land in hay, pasture and feed grains to supply a dominant dairy industry. Despite the visual similarity of the crops in much of southern Quebec and southern Ontario, there are unmeasured and subconscious differences in the rural "way of life" and attitudes to the land in Quebec which give one a feeling that farming is a different type of occupation there. The rural landscape differs in detail, however, because of two factors—the number of special crops that are grown in particular places in southern Ontario, and the distinctive long-lot land subdivision system in southern Quebec. In southern Ontario, three areas of specialty crop production bring sub-regional areal variety to the rural landscape. (1) The southwestern peninsula produces all of Canada's soybeans, has a high percentage of land under corn and, although vegetables are produced near most cities, the specialty area near Leamington and Point Pelee, with its concentration of glass greenhouses, is a distinct areal unit in the sub-region. (2) The chief tobacco area of Canada, coinciding with a section of sandy soils of a former glacial delta, is centred on Norfolk county north of Lake Erie. Its distinctive tobacco barns for flue-curing are cultural features which would define the agricultural region even in winter. (3) The fruit and vineyard concentration of the Niagara peninsula, mainly on the lake plain north of the escarpment, is one of the few relatively large areas of intensive horticulture in Canada.

In southern Quebec, the long-lot farms and linear villages are cultural and visual remnants of the land subdivision systems of New France. These linear farms, often marked by old rail fences, stretch back from the St. Lawrence, Richelieu and Chaudière rivers, and from the later-built roads that parallel the rivers. In contrast, the Eastern Townships of southeastern Quebec have a different rural landscape as a result of the rectangular land subdivision system brought in by British settlers, and because of the linear hills and valleys of the Boundary Ranges. This sub-region of Quebec illustrated the northward migration of landscapes developed in New England. Thus, despite having the same hay and pasture crops as farms in the rest of southern Quebec, and occupied now by French-Canadian people who migrated from the St. Lawrence Valley, the hills and farms of the Eastern Townships present a different sub-regional landscape.

On top of this prosperous agriculture of the Great Lakes-St. Lawrence Lowlands, the most intensive urban system of Canada has been built. More than ten million people live in close proximity to one another and their activities in industry, commerce, transport, service and recreation are all closely interrelated areally. A size-hierarchy of hamlets, villages, towns and cities is spaced in geometric pattern across the Lowlands from Quebec City in the northeast to Windsor in the southwest. Each urban place has its own internal geography but, despite different histories, economies and cultures these cities often have many similar internal areal patterns.

The Lowlands as an urban region is a good area in which to study the geographical concepts of establishing, defining, measuring and describing the many areal and functional connections between a city and its hinterland. For example, the growth of Montreal has had a dominant influence on the areal arrangement of the economy of Quebec. The dairying and market-garden agriculture in the surrounding Montreal Plain is located there to supply this large urban market. The changes in the rural landscape of southern Quebec, from the "quaint habitant" farms of the nineteenth century to the present, well-equipped dairy farms can be attributed directly to the influence of Montreal. The city's clothing industry is functionally connected with the many textile and yarn mills in the towns and villages south and east of Montreal. Farther afield the resource industries of the Canadian Shield are managed from offices rising above Montreal's central business district. Railways, highways and the St. Lawrence River all focus a variety of traffic and products into Montreal; in the geographical pattern of transport Montreal is a central hub.

Another scale of urban geography can be studied within the city itself. In all cities, people, economic activities and buildings are grouped together into distinct areas of common usage. In Montreal, industrial buildings (and their associated range of human activities)

are concentrated along transport lines—the harbour, rail lines and main highways. Montreal, like other Canadian cities, illustrates that industry has geographical patterns of distribution and areal associations with other phenomena, just as there are distribution patterns of landforms, climates or agricultural crops. Industries are located where they are for certain sets of reasons and these can be analysed to explain the logic of the areal patterns; these industrial zones should also show an areal association with certain types of homes for workers. The Lachine residential area, for example, cannot be fully understood without reference to the “work places” in industries along the former Lachine Canal and adjoining railways. Montreal, similar to other cities, has distinct distributions of its ethnic or national groups. English-speaking persons, for example, live in Westmount or Pointe Claire, and French-speaking persons dominate Montreal East; Italian or Jewish people live in the north-central area. Although areal patterns of social geography are characteristic of most cities, it is the particular arrangements of people, their industries, their commerce and their recreational areas that result in that distinctive geographical entity known as Montreal.

Just as Montreal dominates the economy of all of southern Quebec so do the smaller cities in the size-hierarchy dominate the activities of their sub-regions. Sherbrooke, for example, is the main service centre and the chief “work place” in the Eastern Townships. Other towns in southeastern Quebec tend to depend on one industry—often textiles—but Sherbrooke has a variety of industries, educational and service functions, as well as good transport connections in all directions. Quebec City performs a similar “central place” function for people within the lower St. Lawrence region. Its government, educational and religious functions are important employers that give an economic base to the city, but Quebec also processes some of the resources of the nearby Shield and supplies services to residents of the small towns along the lower St. Lawrence River. Because the Great Lakes–St. Lawrence Lowlands region is the main urban region of Canada, many of its internal geographical patterns can be analysed by studying city-hinterland concepts in more detail than can be done here.

There are similar relationships between cities and hinterlands in southern Ontario. The spreading “megalopolis” of Greater Toronto is the central focus of transport lines that serve all of the Ontario lowland and bring the natural resources of the Canadian Shield and the Interior Plains to the city. The areal manifestations of these many spatial connections are illustrated by the management and clerical workers who cluster into the high-rise office buildings of the financial area of downtown Toronto. Although these financial and industrial activities also serve the large concentration of people in the Toronto metropolitan area, they are partly the result of the movement of products, peoples and ideas between the city and its hinterland.

Like Montreal, Toronto has an internal urban geography of its economic activities and social groups. Toronto’s commercial core, for example, is a visual, areal entity that has spread north of the old centre of the original town. The size and number of stores in Toronto’s suburban shopping plazas are spatially related to the size of the surrounding residential area and its number of residents. A walk through Toronto’s “Little Italy” leaves no doubt about the areal concentration of certain ethnic groups in a relatively small space. Despite the differences in languages, street and store signs, architecture and other small items in the urban landscapes, there are many similarities between Montreal and Toronto in the manner in which specific functions and activities are arranged in spatial order.

The cities around the western end of Lake Ontario are now an urban complex which is not duplicated on the same scale elsewhere in Canada. From Oshawa to Hamilton and spreading east to St. Catharines and Niagara Falls, this part of southern Ontario has unique areal patterns formed by the coalescing of individual city patterns. This region has problems of conflicting urban-rural land use, replacement of local governments and numerous social problems, any study of which must consider the particular distribution of

buildings, institutions and transport lines that man has placed on the local landscape. When one sees the problems of moving from place to place in New York, Chicago or Los Angeles, one can appreciate the need for careful planning of future geographical patterns of people and activity in Canada's largest urban concentration.

The remainder of southern Ontario has sub-regions which are centred by one large city, as in southern Quebec. London, for example, as the centre of the four richest agricultural counties in Canada, has service, commercial and industrial areas which function with and for that immediate hinterland; but the city also has industries of regional and national importance as a result of its good transport connections. Windsor is less of a regional capital in the southwest than it is an international city. Many of its industrial activities are the direct result of its location across the narrow Detroit River from Detroit, Michigan. Each Ontario city has its own distinguishing characteristics in terms of certain landmarks, parks or buildings but in other ways they look very much alike along the commercial strips, in new suburban residential streets or along "motel row" on the city edge.

The Great Lakes-St. Lawrence Lowlands region is the most important agricultural and urban region in Canada. Although much of its *area* has been cleared of trees and is now a landscape of prosperous agriculture, most of its *people* live in small areas with large populations. Its large extent of farmland has different landscapes than the even larger area of farmland on the Interior Plains, and its production is more valuable than the latter. Many of the internal urban patterns of its cities are repeated in other cities but nowhere else in Canada are there as many large cities, and they are linked together in a spatial system which has a regional geometry of spacing and linkages not duplicated on this scale elsewhere in the country.

### The Canadian Shield

The Canadian Shield occupies about half of the mainland of Canada. Although there are differences between the northern and southern parts of the region there are also large areas in which there is much similarity. The Shield is defined on the basis of its geology; it is the area underlain directly by ancient Precambrian rocks. For purposes of this discussion, the area of younger sedimentary rocks of Palæozoic age of the Hudson and James Bay lowland is also included because it is similar to the Shield environment in some other characteristics. The Shield is a region of forests, lakes and rocks, but these environmental elements have varying densities and distributions internally. It is a region of few people, compared with its large area, and these people are mainly urban dwellers. The southern Shield, sometimes called the "middle north" by persons in southern Ontario and Quebec, has a resource-based economy; its products—minerals, wood and water power—are exported outside of the region or outside of Canada. The physical environment of the Shield contrasts strongly with that of the Lowlands south of it. Although the line on the map between these two regions is often very sharp in the landscape, interaction and movement between them is common and they are interdependent. Many of the raw materials of the Shield move to the Lowlands for processing or consumption; a reverse flow of people comes into the Shield for recreation and holidays.

The ancient, worn-down, Precambrian rocks of the Canadian Shield have landform characteristics over large areas which are not duplicated elsewhere in Canada. Its often-bare, rocky, knobby hills and its valleys filled with glacial deposition extend in a huge horseshoe shape around Hudson Bay from northern Labrador to the Arctic Coast of the Mackenzie District of the Northwest Territories. Although generally a rugged land internally, the hills are seldom more than a few hundred feet above the valleys. There are very few large areas of level land that might have significance for potential agriculture or forestry.

One method of studying the enormous Shield in smaller units is to look at the drainage basins (see p. 35). The longest rivers flow toward the interior—toward the shallow, cold water of Hudson Bay or to the Arctic Coast. The shorter rivers are outward-flowing and

drop down from the lake-dotted plateau in Labrador, in southern Quebec and in the MacKenzie District, often spilling over the outer escarpment in falls or rapids. The position and character of these rivers are significant for hydro-power production. An exception to the areal pattern of inward- and outward-flowing rivers is the Nelson-Saskatchewan river system where the higher land of the Interior Plains drains directly across the gentle slope of the Shield to southwestern Hudson Bay.

Because the Shield constitutes such a large area of Canada, regional differences in climate can be expected. In general, average monthly temperatures and annual precipitation decrease from the southeast to the northwest. Average winters are less cold in the southern Shield because they may be moderated by occasional warm air masses from the Gulf of Mexico. In summer, large interior and northern sections of the Shield are cooled by the proximity of the cold water in Hudson Bay. In the regional climate of the Shield, the southeast has moderate winters, relatively warm summers and ample precipitation; the northwest has severe winters, no summer and scanty precipitation.

George Hunter

*Canadian Shield terrain west of Lake Superior in the vicinity of Steep Rock Lake, where the water area is almost equal to that of the land.*

These regional differences in climate are mirrored in the vegetation patterns across the Shield. The Mixed Forest covers its southern edge. To the north where average winter temperatures decrease, deciduous trees become fewer and coniferous trees dominate in the forest cover. The conifers are a source of pulpwood which is so important in the total Canadian economy. Northward, even the hardy coniferous trees have difficulty in surviving where summer temperatures decrease, soils are thinner, poor drainage is more common and bare, glacially scoured rock more apparent. Thus, the northern part of the Shield in Quebec and in the Keewatin District of the Northwest Territories is treeless. The close

relationships among environmental conditions are apparent in the similarity of areal patterns of the above-noted phenomena. One of the tasks of physical geography is to explain these ecological relationships and to show how they vary regionally.

Natural-resource utilization in the Shield has evolved specific distribution patterns. From a central core near the south-central outer edge of the Shield, man and his resource-exploitive activities have spread outward across the outer sections. This semicircular pattern of utilization is now penetrating slowly into the Shield where vast areas still remain unoccupied. As already noted, however, the natural environment is different to the north and the resource potential there is scanty or lacking; the same type or intensity of resource development and allied settlement cannot be expected in the north.

The geography of mining is concerned with the distribution patterns of mines, and their grouping together into mining regions. These areal patterns are associated internally with certain types of bedrock geology and externally with transport lines and markets. Mining settlements are both clustered and dispersed; they form an interconnected network of communities in the south-central part of the Shield, but they are isolated towns along the eastern and northwestern flanks. Although known as "the storehouse of minerals" in Canada, not all of the Shield is mineralized. There is a direct spatial association between the areas of volcanic ("green-stones") rock and mineralization; other parts of the Shield consist of sterile granites and gneiss which are not expected to be mineralized. Mineralization is widespread across the south-central Shield and mines have been developed where transport became available.

An interrelated mining region evolved in northeastern Ontario. Early in this century, Cobalt became a centre of mining activity from which prospectors fanned out into the surrounding Shield. By 1920, a network of mining communities, such as Kirkland Lake, Larder Lake, Timmins, Porcupine and Elk Lake, was established; they were linked by rail, road and power transmission lines. These towns were supported by a growing area of agriculture and the railways made it possible to establish pulp and paper mills. Although mines opened and closed as new ore bodies were found and old ones were exhausted, the area as a whole, including the adjoining parts of Quebec by the 1930s, consistently encompassed about half of the operating mines in the Shield. The region functioned together as a unit with its internal economy based mainly on the cluster of mines, and with its prosperity, dependent on external conditions of markets and financing.

Mines elsewhere in the Shield tend to be isolated; the main geographical pattern is one of peripheral location near the outer edge of the semicircular Shield. In two areas, however, mining regions are in a formative stage, suggesting that interconnections and functional relationships will increase there. Near the Labrador-Quebec boundary a cluster of mines evolved after 1954, based on the production and transport of iron ore. Places such as Schefferville, Labrador City, Gagnon, Fermont, Sept Îles and Port Cartier are linked together by rail lines, air transport, a few roads, hydro-power lines and the internal movement of service and professional people. Lacking in this regional economy is an internal, or nearby, agricultural base. Another sub-region is taking form near the Manitoba-Saskatchewan boundary. From an early centre at Flin Flon an outward-spreading areal pattern of mines is evolving. Most of the mines are still near the Shield edge, but outlying centres—Lynn Lake and Thompson—give hope for future northward penetration.

Forest utilization was concentrated along the south-central edge of the Shield. The southward-flowing rivers gave lumbermen access to this part in the middle of the nineteenth century. This forest was then the largest area of unused trees closest to the market of the Great Lakes region. After about 1880, lumber utilization expanded to the northwest; the desirable trees east and north of Georgian Bay were cleared out and transported to southern Ontario or across the Great Lakes to the growing American cities. By about 1910, most of the lumber trees were gone and the forest was then used for another purpose—pulpwood.

A peripheral distribution pattern of pulp and/or paper mills evolved on or near the outer edge of the Shield early in this century. Most of the mills were located in an arc zone between Quebec City and Ottawa; many of them were on the St. Lawrence lowland, at the mouth of Shield rivers from whence they obtained their water, power and pulpwood. As the external demand for newsprint increased in nearby northeastern United States, and American capital obtained cutting rights to large timber concessions, the number of pulp and paper mills increased after 1920. The distribution pattern remained peripheral to the outer Shield edge, however, but with areas of higher densities such as around Lac St. Jean. A slightly different pattern of pulp and paper mills evolved in Ontario as a result of different sizes and positions of the drainage basins. The short, southward-flowing rivers have small river basins in which to produce trees and lesser amounts of water power. Therefore, a line of dispersed mills, rather than clusters, grew from North Bay in Ontario through Sault Ste. Marie, Marathon, Nipigon, Thunder Bay, Fort Frances and Kenora to Pine Falls in Manitoba. Farther west, the Shield edge in northern Manitoba and Saskatchewan does not have a sufficient natural endowment of trees to support a local pulp and paper industry.

The mills in northeastern Ontario are an exception to the semicircular distribution pattern. When the railroad was laid across the Clay Belt around the time of World War I, it crossed northward-flowing rivers. Pulp mills could then be erected at such places as Iroquois Falls and Kapuskasing, utilizing the forests along the headwaters south of the railway and the water power of these rivers as they dropped toward James Bay. This north-central cluster of mills was extended into northwestern Quebec in the 1960s when a mill was built at Lebel-sur-Quévillon on another James Bay river.

The third major natural resource of the Shield, water power, also has a peripheral distribution along its outer edge. The hydro-power plants of the Shield have two main functions. The first is to supply power to the internal resource developments—the mines and pulp and paper mills, and their associated settlements; because many of the power plants were built when technology did not permit long-distance transmission, these power sites adjoin the mines and mills that they supplied. The second is to supply electric power for the residential, commercial and industrial needs of the growing cities of the adjoining Great Lakes–St. Lawrence Lowlands. Fortunately, the outer “fall-line” of the Shield, where outward-flowing rivers tumble over the southern escarpment, is close to the region of greatest need for power.

The evolution of the spatial pattern of hydro-power development was similar to that for mines and pulp and paper mills. The earliest sites were in the south-central edges of the Shield, and later plants were built progressively outward to the east and west along the Shield edge. Early in the twentieth century, the St. Maurice River was harnessed to supply electric power for local industries (pulp mills, chemicals, aluminum, textiles) at Shawinigan and Trois-Rivières, and also to transmit power to the lowland city of Montreal. By the 1920s, a cluster of power plants in the Saguenay River–Lac St-Jean area was producing for the local resource-based settlements and also exporting to Quebec City. By the 1950s transmission technology permitted the rivers farther east, such as the Bersimis (Betsiamites), to be tapped and the power brought to the lowlands industrial and urban region. In the late 1960s, the Manicouagan–Outardes rivers were linked into the outward-spreading areal pattern of power development. Still farther eastward, the Churchill (formerly Hamilton) River tumbles over several falls as it drops toward Hamilton Inlet in Labrador. Its utilization, to begin in 1972, will complete the eastern semicircular line of power plants along the edge of the Shield. While this peripheral pattern was being established, intensification of use was also taking place on the rivers in the central area, such as the Ottawa.

As noted previously, the drainage pattern of the Shield in Ontario and Manitoba is different from that in Quebec. In Ontario, the short, southward-flowing rivers were used

*Lowlying land stretching to the horizon in the Lac St-Jean area of Quebec is one of the few areas within the Canadian Shield suitable for agricultural pursuits.*

Malak

early in this century only to supply local resource development, but their size and volume were not sufficient to produce electric power for export to the adjoining lowland. However, Ontario was able to make use of the northward-flowing tributaries of the Moose River to supply power to industries and cities of the northeast and later, with improved transmission lines, to export electricity from the northeast to the Toronto area. To the west, the Winnipeg River drops out of the lake-dotted Shield, its power being available for local mines and mills as well as for the nearby urban market in southern Manitoba. This river performs the same power-supply functions for urban and industrial Winnipeg as do the rivers of the eastern Shield for southern Quebec cities. The Nelson is one of the few rivers to cross the Shield completely, dropping eastward from the Interior Plains to the Hudson Bay lowland. Its power is available for northern mines and its surplus can be exported southward to the larger urban markets in southern Manitoba and adjoining United States.

Agriculture is not a major activity within the Shield region. There are few large areas with a suitable physical environment for a variety of crops; in addition, the southern sections of the Shield, with the highest densities of urban people, are closest to the best agricultural land in Canada on the Great Lakes-St. Lawrence Lowlands. There is a direct areal coincidence between Shield agriculture and the level lands and better soils of the old glacial lake bottoms. Farming developed on these lacustrine soils when resource-based settlements arose nearby and became local markets. The largest areas of farming are on the Clay Belt (incorrectly so named) across the Ontario-Quebec boundary, and on the lowland around Lac St-Jean. Unlike the other resource-use patterns in the Shield, agriculture is declining areally. The number of farms, the number of farmers and the amount of cultivated acreage declined rapidly after about 1950 when jobs in the other resource industries of the Shield became more desirable. There are, however, regional differences in this decline; because of the cultural background and aims of the French-speaking settlers, they are remaining on the farms longer than settlers in some of the English-speaking areas of northern Ontario.

One of the major natural resources of the Shield is its landscapes or scenery. The totality of its natural environment, with its varying combinations of trees, lakes, rivers, hills and animal life, appeals to urban people of the adjoining Lowlands and nearby United States. Whereas the different elements of the environment are used for minerals, wood products or water power, the total environment in its "unused" form is a resource called

scenery which can be used over and over again. The other natural resources are shipped out of the Shield, but scenery brings people into the region. The areal patterns of recreational use are similar to those of the other natural resources; the south-central edges of the Shield, closest to the high densities of people on the Lowlands, have the greatest use, with decreasing intensity of use and accessibility outward along the Shield edges and in the northern interior.

The Shield is the largest geographical region of Canada. The combination of its environmental characteristics is different from other parts of the nation. Although resource-based economies and settlements are found elsewhere in Canada in small areas, the Shield has vast regions where an exploitive economy is the only activity. Another distinctive characteristic is its lack of agriculture; whereas the rest of Southern Canada has farmland in its rural landscapes, farming is a minor element in settled parts of the Shield and is totally lacking over most of it. All regions have internal diversity within their general uniformity, and so does the vast area of the Shield have sub-regional differences. For example, the northern Shield has a harsher environment and less resource potential than the southern parts; the Clay Belt of Quebec-Ontario has a different landscape appearance than the area north of the St. Lawrence estuary or the Nelson trough of northern Manitoba. Thus, to understand the Canadian Shield fully, its sections should be examined individually to see how each is a part of the whole region and yet differs somewhat from it.

### The Interior Plains

On a world scale, the words "flat, prairie, wheat, petroleum" might well characterize the environment and resources of the Interior Plains of Canada. Although these words accurately describe certain outstanding and important parts of the Plains environment and economy, they may not tell of the variety found within the region. It is true that large areas are very flat, but the landform regions include hills, escarpments, entrenched river valleys and even low mountains; although prairie grassland of varying height once covered the southern sections (prior to cultivation) more than half of the Plains region is forested; although wheat became a staple crop for export after the land was subdivided for settlement, other grains were also grown and some new crops now occupy significant acreages; although petroleum was important in diversifying the Plains economy after 1947, other fuels and minerals have since aided particular parts.

As a landform region, the Interior Plains has a landscape which is easily demarked from the low, rocky, knobby hills of the Canadian Shield to the northeast and east and from the high, sharp peaks of the Cordillera to the west. Within the Plains region a variety of micro-landform features break the monotony of the flat areas. As in other landform regions, these minor features are areally related to bedrock geology, to types of glacial deposition and to recent river erosion. For example, west of the very flat Manitoba lowland a geological escarpment of Cretaceous age rises sharply several hundred feet; it is a landform boundary which is obvious when seen from the air because the steep slopes and nearby gravel or sand ridges of former beachlines are forested and stand out from the cultivated fields. Westward, the lacustrine soils of the Regina plain are very flat but on the horizon a few flat-topped, low hills indicate areas of harder rock that have resisted erosion. In the Alberta Plateau, erosional remnants of harder, horizontal strata, such as the Cypress Hills, also rise above the generally flat surface, and into the plateau steep-sided river valleys have entrenched several hundred feet. The Alberta Foothills, along the western edge of the Interior Plains, are a narrow zone of linear hills about 4,000 feet above sea level; they introduce the traveller from the east to the majestic mountains that rise beyond.

Large areas of the Plains have generally similar climatic conditions but the variations and extremes away from the averages give a distinct regional character to the Plains climate. All of the region is very cold in winter for several weeks at a time, but the south-east and southwest sections record more moderate average monthly temperatures for two

different reasons. In the southeast, occasional warmer air masses from the Gulf of Mexico break winter's grip for a few days; in the southwest, Chinook winds are pulled down the eastern slopes of the Rockies and moderate the temperatures rapidly for several hours or a few days.

Although a map of average annual precipitation shows low precipitation of 10 to 12 inches along the central South Saskatchewan River and increasing amounts outwards, these averages mask a wide range of precipitation variability from year to year and from place to place. The averages indicate that about two inches of rain fall in a summer month but some stations have recorded five to 10 inches of heavy showers in some months whereas in other years virtually no rain may fall. Variability of precipitation is therefore more characteristic of the Interior Plains climate than in any other region of Canada; these fluctuations are well known to Prairie farmers whose economic success is so dependent on the exact amount of rain that falls in their particular area during the growing season.

Vegetation patterns are indicative of areal differences in climate. The original grasslands, of varying types, that once spread across the southern Plains, indicated the areas of lower precipitation and higher summer temperatures. Much of this natural grassland was ploughed under, despite being nature's indication that the region was marginally dry for agriculture. North of the grasslands, deciduous trees were able to survive where the average precipitation was slightly higher and summers were cooler. Probably because of the political name, Prairie Provinces, given to the region, many Canadians may have an exaggerated concept of the area of grassland and parkland across the Interior Plains. It is true that most residents live in this small zone of prairie grassland environment, but the larger northern parts of each province are forested. The coniferous forest belt that covers the northern part of the Plains differs very little from the forested landscapes of the adjoining Shield and both areas have very few settlements.

In the past, general maps of crop production were related to the distribution of soils and other environmental conditions. Brown soils lie beneath the area of short grass and low precipitation near the Saskatchewan-Alberta border; because this combination of physical conditions was less favourable to grain production, much of the land remained in natural pasture supporting the ranching industry. The dark-brown soils are around the brown soils, generally coinciding with the former zone of tall prairie grass which has slightly more precipitation. These environmental conditions were suitable for wheat but not for many other crops. The black soils form a third semicircular zone, extending through Edmonton, Prince Albert and into southern Manitoba. These excellent soils correspond to the belt of parkland vegetation, and the area of about 15 to 20 inches of precipitation. Farmers found that a greater variety of crops could be grown on the black soils in addition to wheat. The farming economy that evolved there in the inter-war period produced feed grains, oil seeds, pasture and large numbers of cattle. Northward, the soils are degrading black-to-grey wooded podsoils and these underlie the Mixed Forest. Because of a shorter frost-free period and greater costs in money and time to clear the forest cover, agriculture penetrated more slowly into this different environment. After about 1940, the northern push of agriculture into the grey forest soils almost ceased; with a few exceptions, such as in the Peace River area, withdrawal has been more common than expansion.

Although the general patterns of agriculture coincided fairly closely with the environmental zones of soils, vegetation and climate until the 1940s, non-environmental factors have since had much more influence on the kind of crops grown and their areas of concentration. Crops have become more market-oriented and technology, such as the use of fertilizers and frost- and disease-resistant varieties, has decreased the environmental influences upon crop distributions. In addition, crop acreages also change from year to year for the region and also within farms as a result of political decisions concerning acreages, changes in foreign markets, consumer preferences and other external factors. But despite the growing internal variety in agricultural patterns, the distinctive agricultural characteristics of the Interior Plains are still apparent in the crops of wheat, feed grains,

flax, oil seeds and legumes. An aerial view of the large, rectangular farms with only a few crops, the widely dispersed farmhouses, and the absence of trees except near the farmhouses leaves little doubt that agriculture of the Plains region is different from that elsewhere in Canada.

The mineral resources of the sedimentary rock of the Interior Plains include all of Canada's potash, most of its petroleum, natural gas and sulphur, much of its coal, and some of its salt and gypsum. It is therefore a mining region which is distinct in the type of minerals that it sends into national and world markets. Similar to the areal patterns of development that evolved over time and area in the Shield, there is also an outward-moving pattern of oil wells on the Plains. From the first large wells found at Leduc south of Edmonton in 1947, new oil fields were located progressively farther away from the Edmonton core, such as at Redwater, Pembina and Rainbow Lake. This functional pattern is linked together by pipelines, just as the Shield mines are linked by railways, and has spread to the northwest into British Columbia and to the Athabasca Tar Sands in the northeast.

The visual impact of oil is apparent in the landscapes of the Prairie cities. The oil wells are in the rural areas or near small towns, but the head offices of the oil companies and the petroleum refineries are in the large cities. Whereas oil refineries may be less noticeable amid the larger industrial mix in the cities of Eastern Canada, on the edges of the Prairie cities they are significant elements.

The other elements in the internal urban geography of Plains cities are quite similar to eastern cities. The commercial core has arisen where the city had its first origins; older industrial zones radiate out from this core along the railway lines; new industry is located along the main highways; the residential bungalows built in the past 30 years look no different from those elsewhere in Canadian cities. There are shades in the urban land-

*A modern farm north of the city of Saskatoon in Saskatchewan, showing the rich black soil of the area which, in addition to producing excellent crops of wheat, has been found to be eminently suitable for a variety of other crops.*

George Hunter

scape, however, which help to characterize Prairie cities; because they were settled mainly in this century, there are few old buildings, narrow streets are rare and wide streets are common, and the line between urban and rural uses is quite sharp and usually has been carefully planned and controlled.

One of the distinct geographical characteristics of the Interior Plains is the geometric spacing of its villages, towns and cities. In a generally level plain with a simple economy, some of the theory concerning the expected spacing of service-centre towns can be studied in reality. The size and function of towns in southern Saskatchewan, for example, are related to the number of farmers in the surrounding area needing certain urban services. Other specialized services, needed less frequently, tend to be located in larger cities where they can serve more people locally and be available to people from a larger surrounding rural area. A map of the urban centres on the Interior Plains shows a general regularity to their spacing which is related to their size and functions. This geometric pattern is not "ideal", however, because, in addition to their service functions, there are other reasons for cities to exist, such as processing local resources, administration, etc. The size gradation of this pattern is now breaking down as road transport improves and people can travel farther for their services; the small towns and villages are declining in population as people concentrate into certain large cities.

The Interior Plains have physical environmental patterns which are different from the rest of Canada. Like the Shield, the region has large areas of generally uniform environmental conditions, but the character and combination of these elements are different from those of the Shield. The Plains have a larger area of cultivation than the Great Lakes-St. Lawrence Lowlands, but produce different crops and have a different rural settlement pattern with lower population densities. Internally, the southern part of the Plains, where settlers have turned the natural grasslands into an area of large farms and a geometric pattern of urban places, contrasts with the empty, forested northern Plains where recreation and other resource-based activities are similar to those of the adjoining sparsely populated Canadian Shield.

### The Cordillera

A mountainous region known as the Cordillera extends along western North America from south of Mexico to Alaska. Most of British Columbia and all of Yukon Territory are within the Canadian Cordillera. Great contrasts within small areas are characteristic of the natural environment of this mountainous region. It is a region of urban people, with agriculture entirely lacking over large areas or confined to certain narrow valleys or flood plains. This urban population is concentrated into one small area in the southwestern corner of British Columbia where 75 p.c. of the population lives.

The only other part of Canada with comparable spectacular landforms is the mountainous area of Baffin and Ellesmere Islands in the northeastern Arctic, but their extent is not as great as the 600 miles of peaks, ridges and valleys across southern British Columbia. Although these mountains seem to be a jumbled mass of peaks when viewed locally, and stretch endlessly to the horizon when viewed from the air, they actually have quite specific areal patterns and are subdivided into smaller sub-regional landform units. For example, despite some American and British maps which spread the name "Rocky Mountains" across much of British Columbia and even into the Yukon and Alaska, the Rockies are a specific line of mountain ranges extending from Montana in the United States along the Alberta-British Columbia border; they terminate at the broad plain of the Liard River in northeastern British Columbia. The western landform boundary of the Rockies is the Rocky Mountain Trench, one of the longest continuous valleys on the earth's surface, extending as a potential through route from Flathead Lake, Montana, to the headwaters of the Liard River in the Yukon. In contrast to the mountain ranges, the Interior, Stikine and Yukon plateaux are interior basins with generally level horizons, but locally are deeply cut by rivers and canyons.

Contrasts in climate within small areas are characteristic of all mountainous regions and the Canadian Cordillera is no exception. Because most of the weather stations are in the valley bottoms where the settlements are, these contrasts must often be inferred from vegetation differences or other indirect environmental information. The greatest amounts of precipitation recorded in Canada—more than 150 inches annually—are one of the distinctive features of some of the west-facing slopes of the Insular and Coast Mountains. And only 200 to 300 miles eastward, in the southern interior valleys of British Columbia and in southern Yukon, some of the driest stations outside of the Arctic report less than 10 inches of annual precipitation. Most of the coastal precipitation falls on the lowland settlements as rain during the winter months, and blankets the higher elevations of the nearby mountains with snow.

Coastal British Columbia is the warmest part of Canada in winter but the linear interior valleys and plateaux are open to the southward penetration of cold air masses from Alaska and settlements in these valleys record many days of below-zero winter temperatures. Winter temperatures in the interior of the Cordillera therefore differ very little from those experienced across the Interior Plains. In summer, the southwest coast is normally sunny and cool (monthly averages of 62-65°F.) for many weeks when high-pressure ridges form over it and deflect storms northward. But a few hundred miles away the southern interior valleys may be experiencing some of the hottest temperatures recorded in Canada. Thus, the coastal climate is different from the rest of Canada in both summer and winter, but the remainder of the Cordillera has climates similar to those known east of the mountains.

The vertical contrasts in climate are apparent in the horizontal zonation of vegetation on the mountain slopes. The mild and wet coastal climate has nourished the largest trees found in Canada. Because temperatures decrease with altitude and steep rocky slopes have little soil, tree size and density decrease at about 5,000 feet altitude, and generally the alpine slopes above about 6,000 feet are treeless. In northern British Columbia and central Yukon, the upper tree line is about 3,500 feet above sea level, leaving only narrow strips of forest cover along the river valleys. Although grassland is obvious to travellers through the dry valleys of southern British Columbia, it occupies only narrow strips in the valley bottoms or across small basins and the total area is not large; above the grasslands, the middle and upper slopes are forested. One of the characteristics of the Cordillera as a geographical region is its variety of physical environments within small areas but also the repetition of that variety over its large area.

Except for the cities in southwestern British Columbia, settlements throughout the Cordillera are based mainly on the exploitation of one particular natural resource. This resource-based economy is similar to that of many settlements in the Canadian Shield and the Atlantic Provinces. As in other regions of Canada, these resource developments have evolved in rather specific areal patterns.

Forestry is the main segment of British Columbia's economy. Utilization of the large trees started in the southwest and the wood-processing industry is still concentrated there. The forests on the coastal lowlands near Vancouver, Nanaimo and Victoria were cut first and the logs processed in local mills for export. As forests farther away along the coast were cut, a log-transporting technology developed to carry logs to the large mills in or near the cities around Georgia Strait. Improvements in transport technology—up to the modern self-dumping log barge—permitted the exploitation of a longer coastal hinterland to supply the urban sawmills. The mills and settlements around Georgia Strait and northward along the Inside Passage became part of an integrated, functional region linked together by movements and services related to the forest industry.

Prior to 1940, because the wood products were mainly exported by water to northwestern Europe or eastern United States, the forest industry was concentrated on the coast, and mainly near the ports in the south. After 1950, increased world demand, plus improved rail and road transport into the untapped forest reserves of the interior, permitted

*A complete-circle view of Crowsnest Pass through the Rocky Mountains, close to the southern end of the Alberta-British Columbia*

an interior areal expansion of the industry. Nodes of intense utilization arose at transport junctions such as Prince George and Kamloops, and in southeastern British Columbia. The interior forest industry is now establishing geographical patterns of concentration, and corporate integration of processing, similar to that which developed on the coast prior to 1940.

The geography of the West Coast fishery is different from that on the Atlantic Coast. The five main species of salmon constitute most of the West Coast fish catch, and the industry has adapted to the natural habits and migrations of these fish. Fish canneries were established at or near the mouths of most rivers all along the coast late in the nineteenth century, but the greatest concentration of canneries was near the Fraser and Skeena rivers which had the largest drainage basins and therefore usually had the most fish production. Gradually fishing technology improved so that larger and faster fishing vessels, with better gear, could harvest a larger area away from the river mouths. Thus, the need decreased for many small dispersed canneries and the processing industry concentrated in large canneries in a few central places. By the 1960s, the former dispersed linear pattern of salmon canneries had become one of concentration at the mouths of the Skeena and Fraser rivers, where there were shipping connections for export. Whereas this process of spatial concentration is now complete on the West Coast, and was related to corporate integration and fishing technology, the process is just beginning on the East Coast of Canada.

Through more than a century of mining history, the geographical patterns of development have illustrated some consistent areal trends. From 1890 to 1905 the Kootenay sub-region of southeastern British Columbia was one of the most important mining areas of Canada while the rest of the province was struggling to create a viable economy. The southeast is well mineralized; as a mining region it functions around the large smelter-refinery at Trail to which a variety of ores can be taken for processing. The Kootenays still have the major concentration of mines in the Cordillera; abandoned mines, old slag piles and decaying houses—but also modern efficient mines and new planned towns—are significant elements in the regional landscape. Those mineralized sections of the Coast and Insular Mountains accessible to ocean transport continue to be illustrated by dots on the mining maps. In the late 1960s, the capital and markets of Japan were the stimuli for new copper and iron mines there. The dispersed and scanty pattern of mines in the Yukon illustrate the economic disadvantages of location, despite a well-known variety of mineralization. Having only a few internal transportation lines until recently, potential mines faced higher transport costs as a result of their location north of the Coast and St. Elias Mountains.

*border. A camera innovation presents this spectacular scene as it can be seen by the eye only in part as one turns around.*

Gordon J. K. Packer

The availability of hydro-electric power has aided resource development in the Cordillera, just as it did in the Canadian Shield. The Cordillera has the fortunate natural endowment of heavy precipitation, sloping landforms, many lakes for water storage and numerous rivers. To these natural elements man has added dams, turbines and transmission lines to the urban and industrial markets.

Water-power development has shown one pattern of concentration and another of dispersal. Throughout British Columbia's settlement history, the largest urban and rural populations and most industries clustered into the southwest corner. Power was first supplied to this market by small sites in the Coast Mountains near Vancouver or on short rivers on southern Vancouver Island; as transmission technology improved, power was produced at more distant sites, such as at Bridge River east of the Coast Mountains. Thus, in the southwest, a cluster of relatively small power plants evolved on short rivers near the urban and industrial markets while elsewhere in the province they were dispersed and supplied local needs only, the latter being similar to the patterns of power development in the Ontario Shield. For example, in the southeast, power for the large Trail smelter-refinery and for cities came mainly from the Kootenay River. In the northwest, the Nechako River was dammed and diverted back through a tunnel beneath the Coast Mountains to produce power at Kemano for the large aluminum smelter at Kitimat. By the late 1960s when power was being developed in the fourth corner of the province—on the Peace River of the northeast—long-distance transmission technology permitted the linking together of these dispersed sites. In the 1970s, the separate areal patterns of concentration and dispersal should become part of one large provincial network.

The preceding paragraphs have noted that the regional characteristics and areal patterns of resource development of forestry, mining and water power are similar to those of the Canadian Shield. To these similarities can be added the recreational use of the spectacular and varied environments of the Cordillera. As in the Shield, the "empty" areas of the Cordillera will have increasing value as population densities increase in the rest of the Continent. Also, as in the rugged Shield, agriculture is a minor activity in the Cordillera. Climate and soils in most valleys are favourable for agriculture and urban markets are nearby but the amount of suitable level land in the valleys is small.

Similar to the Shield, population in the Cordillera is mainly urban, the difference being in the great concentration in one area in southwestern British Columbia. Half of the population of the Cordillera lives in Greater Vancouver and another 25 p.c. lives near by in the Lower Fraser Valley and near Victoria on southern Vancouver Island. No other province has such a large share of its population in such a small area.

The differences in the internal urban geography of Vancouver compared with the other large cities of Montreal and Toronto result partly from its scenic mountain backdrop and the shape of its harbours. Other visual differences in Vancouver can be attributed to its recent areal growth which came almost entirely in this century. In some characteristics, Vancouver has the same urban landscapes as cities of Eastern Canada—the high-rise office buildings and apartments, the rows of ranch-style homes, the suburban shopping centres, and the low sprawling factories and warehouses along the outer highways. Most Canadian cities have all of these elements and what makes each city distinct is the exact internal arrangement of the land uses with relation to one another. Vancouver has its own unique patterns.

The mountainous features of the Cordillera give variety within small areas in climate, vegetation, soils, land use and settlement. The region can be characterized by natural-resource-development emphasis, similar to the Canadian Shield and, to a lesser extent, to the Atlantic Provinces. The urban development within the southwestern Cordillera is like that in metropolitan Montreal and Toronto, but British Columbia lacks the wider network of interconnected large cities that is one of the characteristics of the Great Lakes-St. Lawrence Lowlands. Within the Cordillera, the two main sub-regions are the coast with its distinctive climate and urban concentration, and the interior with its growing resource-oriented settlements. Despite the great latitudinal extent from central British Columbia to northern Yukon, there is a great deal of similarity in the environment of the interior Cordillera and in the type and sparseness of settlement. Although the coast-interior subdivision has been fundamental in the history of areal occupation of British Columbia, improved transport of the past two decades is breaking down this division and a new set of areal patterns is evolving in the province.

### The Northwest Territories

This region is defined by political boundaries and lacks the uniformity of certain physical or economy criteria used to define other regions of Canada. The Northwest Territories is characterized by diversity within its natural environment, lack of developed resources, scanty population and a different type of government. The lack of developed natural resources is related both to the internal poor endowment of the natural environment and to external problems of distance and accessibility.

Within the large area of the Territories there are two main environmental regions—the subarctic Mackenzie River Valley and the arctic of the northern islands and north-eastern mainland. These regions have differences in their resource potential, present populations and accessibility. The line separating arctic from subarctic is the 50-degree July isotherm; this climate line defines the arctic areas northeastward as having no summer, and the subarctic areas southward as having some summer warmth. The climate line coincides closely with a significant vegetation line—the northern limit of tree growth—and is also a cultural line separating Indians and Eskimos. Thus the arctic region has certain specific climate characteristics, is treeless and is the home of the Eskimos; the subarctic part has a different summer climate, has forest cover and is inhabited by Indians and most of the white population of the Northwest Territories.

The agricultural and forestry uses of this enormous area are minor in the subarctic and entirely lacking in the arctic sections. Coniferous trees do grow in the subarctic Mackenzie Valley but they are small, grow slowly in the short summer and are separated by numerous small areas of poor drainage—muskegs, swamps and lakes. This forest is available for lumber in the Mackenzie Valley settlements but as a natural resource it compares poorly with the larger areas of better forest south of the Territories. The unfavourable environment of the arctic region does not permit tree growth; not only are summers cool, but much of the region has bare, glacially scoured rock where soil is lacking. A natural environment in which trees cannot grow is an indication that normal agriculture would be difficult or

impossible. Undoubtedly, however, crops could be produced in the arctic region under glass cover and with imported soil if there was an economic or social need for them. More favourable summer conditions in the subarctic Mackenzie Valley permit the possibility of agriculture there. Gardens can be productive but lack of a large local market discourages agriculture as an occupation. Improved transportation enables food products to be brought in from better agricultural land southward.

Animal life on the land and in the sea has been sufficient to help support the scanty native population. This is the only region of Canada in which undomesticated animal resources are a significant element in the local economy. Game resources, such as woodland caribou, moose, fish, ducks and other birds, are still important in the food supply of the Mackenzie Valley Indians, as they have been for centuries; to the Eskimos, sea resources such as seals, walrus and white whales are staple items of diet, along with barren-ground caribou for Eskimo on the arctic mainland. For both people, however, animals now constitute a decreasing percentage of their food intake. Fur-bearing animals became important to the native economy after the white man entered the region and persuaded first the Indians and later the Eskimos to trap. The dispersed line of settlements established in the nineteenth century along the Mackenzie River were originally fur-trading posts, and some of them still have this main function. The treeless arctic has only the white fox as a fur resource, in contrast to the variety of fur-bearing animals in the forested Mackenzie Valley, and as a consequence, trapping did not become an important part of the Eskimo economy until the 1920s.

*A gold mine at Yellowknife, north of Great Slave Lake in the Northwest Territories, and within the Canadian Shield. The land is rough and rocky, laced with muskeg, and vegetation is sparse.*

George Hunter

Mineral resources are the hope that some part of the Territories will become of some significance in Canadian economy. It is underlain by parts of two geological regions—the Precambrian rocks of the Canadian Shield and the flat-lying young sedimentary rocks of the Interior Plains. The Mackenzie Valley is a landform and geological extension of the Interior Plains and may have the reserves of fuels and non-metallic minerals known to the south. Similar types of sedimentary rocks extend through certain Arctic islands where minor showings have encouraged costly oil and gas exploration. Whether or not possible future oil or gas fields will be able to compete with other fields located closer to world markets may depend on external political or company policy decisions. Different geological structures and a different mineral potential are found in the Precambrian rocks under the eastern part of the mainland and the eastern Arctic islands. Exploration there has occurred on the accessible edges, similar to the patterns in the southern Shield but on a smaller scale. In the arctic sections, development has been further hampered because water transport operates in seas that are ice-covered for nine to 12 months of the year. Although mineralization is known in the Territories, whether mining increases in significance depends on external decisions.

As in other regions of sparse population in Canada, the total natural environment, or "scenery", may attract short-term visitors. The tundra vegetation of the treeless arctic is unique in Canada; the mountains of Baffin, Devon and Ellesmere islands are the highest in eastern North America and their ice-caps and glaciers present spectacular alpine scenery; ice floes and icebergs could be a different water-travel experience for most people. The vague "lure of the North", and the chance to see a different environment and a different people—the Eskimos—may yet be one of the most valuable elements in the arctic resource base.

The former social customs and occupations of the 17,000 Canadian Eskimos are well known throughout Canada, and probably throughout the English-speaking world, but their changing geographical patterns are less well known. When the Eskimos depended mainly on local land and sea resources for their food and clothing they were a migratory people living in small groups of families; they stayed within a vaguely defined coastal area, except for a few hundred who hunted inland most of the time. When fur-trading posts were established, their hunting activities were adjusted to fit seasonal patterns of trapping and these activities became more concentrated near the trading posts. After World War II, new settlements based on air and radar bases offered opportunities for wage employment at the same time that the market for white fox furs declined. In addition, the Federal Government encouraged handicraft work of carving and painting at certain settlements. These changes in occupations caused the Eskimos to give up their migratory habits of living in snow houses and tents; they assembled into a few specific settlements where they reside in small prefabricated frame houses imported from Southern Canada. Thus, Eskimos are "urbanizing" just as other Canadians are doing farther south, and large areas of the Arctic are now completely unoccupied.

The Northwest Territories has specific characteristics that are different from other Canadian regions. It is the only region where the native population constitutes a significant element in the local human geography, and their use of animal resources is not duplicated in importance elsewhere in Canada. The exploitive economy of the white residents, most of whom live in the Mackenzie Valley, is based on minerals, furs and fish in particular places but each of these elements in the regional economy is minor in the total Canadian economy. Most of the population is "urban" and now lives in numerous, dispersed, small settlements along the Mackenzie River and around Great Bear and Great Slave lakes and also in villages along the Arctic Coast of the mainland and the southern Arctic islands. As in the Shield and the Cordillera, large areas are completely unpopulated. Internally, the major geographical sub-regions are the arctic section to the northeast—treeless, the land of the Eskimos, and having few natural resources—and the subarctic of the Mackenzie Valley, with some natural resource potential, the home of Indians and most of the white population.

## Section 1.—Geographical Facts

Canada, occupying the northern half of the North American Continent with the exception of Alaska and Greenland, is the largest country in the Western Hemisphere and the second largest in the world. The lands within its 3,851,809 sq. miles of territory are extremely diverse, ranging from the almost semi-tropical areas of the Great Lakes peninsula and the southwest Pacific Coast, wide fertile prairies and great areas of mountains, rocks and lakes to seemingly endless stretches of northern wilderness and arctic tundra. The southernmost point of the country is Middle Island in Lake Erie, at 41° 41' N. In a straight line 2,875 miles northward, past the treeline and far into the Arctic, is Cape Columbia on Ellesmere Island, Canada's northernmost point, at 83° 07' N. From east to west at the widest point, the straight-line distance is 3,223 miles—from Cape Spear, Newfoundland, at 52° 37' W, to Mount St. Elias, Yukon Territory, at 141° W.

In position, Canada is situated at the crossroads of contact with the principal powers and some of the most populous areas of the world. In the south, it borders on the United States for a distance of 3,986.8 miles. In the north, the Arctic Archipelago penetrates far into the polar basin, making Canada neighbour to northern Europe and the Union of Soviet Socialist Republics. In the east, the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west, the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides departure points for crossings of the North Pacific Ocean between continental North America and the Far East. The length of the Yukon-British Columbia border adjoining Alaska is 1,539.8 miles.

In size, Canada's 3,851,809 sq. miles may be compared with the area of the Soviet Union at 8,649,539 sq. miles,\* China (including Taiwan) at 3,705,408 sq. miles,\* and Brazil at 3,286,488 sq. miles.\* It is more than 40 times the size of Britain and 18 times the size of France. This immense area, which seems to afford extensive scope for settlement, imposes its own burdens and limitations. Much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one third of the total; the occupied farm land is less than 8 p.c. and the productive forest land 27 p.c. of the total. The population, estimated at 21,681,000 as at June 1, 1971, may be compared with 203,213,000† for the United States (1969) and with 90,840,000† for Brazil (1969).

Most of Canada's population lives in a corridor one to two hundred miles in width along the whole extent of the southern border. Northward, within the next two to three hundred miles, there are isolated centres established primarily for the extraction of minerals, timber or power and beyond are only the outposts of the northern territories. Thus, size and distance have permeated the lives and background of Canadians, forcing their efforts toward the solving of major problems of transportation and communication and of problems created by the existence of regions with different cultural characteristics and with different resources, culminating in divergent levels of economic progress.

The geographical knowledge of Canada is reasonably complete considering its size and its large areas of difficult access. The whole country has been surveyed and mapped at a scale of 1:250,000, which is very close to four miles to the inch, allowing a detailed depiction of relief, river systems, transportation facilities, forest cover and centres of population. Comparisons of different features and areas can be made, as all sheets of the series are drawn to the same specifications. In addition, all settled areas and regions of northern development have been mapped at larger scales, in particular at 1:50,000 or approximately one and a quarter inches to the mile, and vertical air photographs showing still more detailed depiction of the terrain are available for the whole country, varying in scale from about one inch to the mile in the Arctic to four inches, or larger, to the mile in settled areas. Details of Federal Government surveying and mapping services are given in Section 3.

\* *United Nations Statistical Yearbook, 1969.*

† *United Nations Population and Vital Statistics Report, January 1971.*

Politically, Canada is divided into ten provinces and two territories.\* Each province is sovereign in its own sphere and administers its own natural resources and upon such resources, as related to topography, position and climate, is based the economy of the province. The resources (except for game) of the Yukon and Northwest Territories, because of their remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government. The approximate land and freshwater areas of the provinces and territories are given in Table 1.

**1.—Approximate Land and Freshwater Areas, by Province or Territory**

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles

The Canadian Permanent Committee on Geographical Names, administered by the Department of Energy, Mines and Resources, deals with all questions of geographical nomenclature affecting Canada and undertakes research and investigation into the origin and usage of geographical names. The Committee is composed of representatives of the federal mapping agencies and other federal agencies concerned with nomenclature and a representative appointed by each province.

The mileages in Table 2 are another indication of the size of Canada. They show the length of transportation facilities required between the larger cities, between outlying industrial communities built up around large mining or smelting projects and the nearest cities, and between northern outposts and the supplying cities.

\* The economic development of the country as a whole has formed regions quite distinct from the political divisions; these are described in an article appearing in the 1962 Year Book at pp. 17-23.

## 2.—Travel Distances between Certain Cities and Other Points of Interest in Canada

NOTE.—The dash used in this table indicates that the distance concerned is of no particular interest. In each case the mileage given is for the type of travel most generally used—road (H), rail (R), air (A) or water (W); air mileages are given for most transcontinental distances but mileage by one type of travel may be given in one direction between two points and by another type of travel in the opposite direction. All distances are given in statute miles.

## Subsection 1.—Inland Waters

Every year about 8,000,000,000,000 tons of water fall on Canada in the form of rain and snow. Much of it is evaporated but a large amount drains back to the oceans as surface run-off, forming rivers and lakes along its route. This surface water, ceaselessly moving, is the dominant feature of the Canadian environment. It has been estimated, in fact, that about 7.6 p.c. of Canada's total area is covered by fresh water (Table 1). There are probably more lakes here than in any other country in the world—so many that they have never been counted. The total area of fresh water is given as 291,571 sq. miles but this figure does not include most of the small ponds, non-permanent lakes and sloughs, seasonally flooded areas or large areas of marsh and wet tundra. As much as one seventh of all the fresh, liquid, surface water in the world is contained within Canada's boundaries.

A large portion of this water is contained in the Great Lakes. About 37 p.c. of their total area is in Canada, as shown in Table 3. These lakes include some of the largest bodies of fresh water in the world, so large that they have measurable, although very slight, tides.

*The Saint-Maurice, flowing southward for 237 miles into the St. Lawrence, is one of Quebec's most important rivers, esthetically and economically. The magnificent forests in its watershed support seven pulp and paper mills and the flow of its waters produces 2,000,000 kw. of electric energy. The bay in the foreground is filled with pulp logs.*

3.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above IGLD (1955) <sup>1</sup>	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles

<sup>1</sup> International Great Lakes Datum (1955)=Mean Water Level at Pointeau Père, Que.  
<sup>2</sup> Eight-year average. <sup>3</sup> Ten-year average.

Other large lakes in Canada, ranging in area from 12,300 to 9,500 sq. miles, are Great Bear Lake, Great Slave Lake and Lake Winnipeg. Apart from these, notable for size, there are countless smaller lakes scattered over the major portion of Canada lying within the Canadian Shield. For example, in an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 sq. miles south-west of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

Lake storage is very valuable—it represents water that can be drawn upon in time of drought to be replaced in time of plenty. Lakes are natural regulators of river flow. But the true measure of a country's water wealth is the amount of water that can be depended upon to be replaced each year—the amount that remains after evaporation has been subtracted from precipitation. This is the amount that flows in its rivers. Here, too, Canada is very fortunate. The combined mean annual flow of all its rivers has been estimated at 3,500,000 cu. feet per second—about 9 p.c. of the total flow of all the rivers of the world. Set against a population of less than 1 p.c. of the world total, this constitutes a very generous endowment of fresh water.

#### 4.—Elevations and Areas of Principal Lakes, by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water. All elevations are in feet above mean sea level. "Total" refers to the area of the whole lake; "part" refers to the area within the designated province or territory.

It is understandable that Canada's history of settlement and industrial development has been moulded by the influence of its great rivers. The country's first industry, the fur trade, flourished because of the ready access to the interior provided by the St. Lawrence River, the Great Lakes and their tributary streams and the many other great and small waterways. Early exploration and settlement depended on this same natural means of access. The plentiful water supplies of the flat and fertile plains of southern Ontario and Quebec attracted an industrious farming people. The river-borne transportation of lumber and later the power of water-driven turbines were vital factors in the building of the country's industrial base. Today, more than ever, water is the key to Canada's development, supplying the renewable energy required for industrial growth, providing easy and relatively cheap transport for bulk raw materials and playing a vital part in the processing of those materials.

Table 5 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indentation of names; thus, the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

### 5.—Lengths of Principal Rivers and Their Tributaries

Drainage Basin and River	Length	Drainage Basin and River	Length

The facing map shows the major drainage basins of Canada. Probably the most important is the Atlantic drainage basin, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From the head of Lake Superior to Belle Isle at the entrance of the Gulf of St. Lawrence, the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a rugged, rocky, plateau region over the edge of which tumble many swift-flowing tributary rivers. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The Saint John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin is the largest in area and its main river is the Nelson. The Winnipeg River, a tributary of the Nelson, is completely developed for hydro-electric power but development of the Nelson itself is just beginning. The two branches of the Saskatchewan River, tributary to the Nelson, drain the great agricultural region of the mid-west and are now the sources of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers. It flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, barge navigation is possible from Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro-electric developments and in season swarm with salmon returning inland to their spawning grounds. The Fraser River rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area. The Columbia is an international river which has a total fall of 2,650 feet during its course and has thus a tremendous power potential. Although a considerable portion of the United States potential has been developed, Canadian development is relatively slight. The Yukon River is also an international river but, although the largest on the Pacific slope, is at present relatively unimportant economically.

### Subsection 2.—Coastal Waters

The coastline of Canada, measuring over 150,000 miles, is one of the longest of any country in the world; it comprises the following estimated mileages (statute):—

#### Mainland—

Atlantic, 9,707; Pacific, 4,363; Hudson Strait, 2,671; Hudson Bay, 6,233; Arctic, 12,282; other, 1,240; total, 36,496 miles.

#### Islands—

Atlantic, 17,790; Pacific, 11,620; Hudson Strait, 8,318; Hudson Bay, 6,956; Arctic, 56,677; other, 12,605; total, 113,966 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Pacific and Arctic marginal seas surrounding Canada.

**Atlantic.**—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 50 to 120 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia, the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 317,501 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms. Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

**Pacific.**—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coasts for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

**Arctic.**—The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The floor of the submerged part of this continental margin is nearly flat to gently undulating, with here and there isolated rises or hollows. Most of it has an average slope, seaward, of about one half a degree, with an abrupt break at the outer edge, to the conti-

mental slope whose declivity is commonly six degrees or more. From the Alaskan border eastward to the mouth of the Mackenzie River the shelf is shallow and continuous with the coastal plain on the mainland; the outer edge of the shelf, or continental shoulder, lies at a depth of about 35 fathoms and about 40 nautical miles offshore. This shelf is continuous with that north of Alaska and Siberia. Near the western edge of the Mackenzie River delta, the continental shelf is indented by a deep valley (the so-called Herschel Sea Canyon) whose head comes within 15 miles of the coast. Between Herschel Sea Canyon and Amundsen Gulf, the typical features of the continental shelf are replaced by the submerged portion of the Mackenzie River delta, which forms a great pock-marked undersea plain, mostly less than 30 fathoms deep, up to 75 nautical miles wide and 250 miles long.

North and east of the submerged portion of Mackenzie River delta, the continental shelf, while typical in form, is more deeply submerged than that off the mainland and Alaska. Its gently undulating surface is, for the most part, 200 fathoms or more below sea level, and the well-defined, nearly straight continental shoulder is mostly more than 300 fathoms deep, giving way to the smooth continental slope which extends without significant interruption to the floor of the abyssal Canada Basin at a depth of about 2,000 fathoms. The deeply submerged continental shelf extends along the entire west coast of the Canadian Arctic Archipelago from Banks Island to Greenland. All of the major channels between the islands—Amundsen Gulf, M'Clure Strait, Prince Gustav Adolf Sea, Peary Channel, Sverdrup Channel and Nansen Sound—have flattish floors at about the same depth as the shelf and appear to enter it "at grade", although there are a few local irregularities that may be the result of glacial action. No deep indentations or canyons are known to cut the continental slope or continental shelf off the Archipelago, except one sinuous canyon that heads off Robeson Channel at the northeastern end, close to the coast of Greenland. The submerged sides of the channels of the Archipelago, and the slopes from the shoreline at the western edge of the islands to the inner edge of the deeply submerged shelf, are in many places marked by a series of steps or terraces.

The continental shelf bordering the Arctic Ocean as well as the adjacent mainland, particularly near the delta of the Mackenzie River, and the islands of the Canadian Arctic Archipelago have been subjected to increasingly intensive scientific study and mineral resource exploration during the past 15 years. Co-ordinated and continuing programs of research and survey have studied the bedrock geology, the development of the terrain, the sediments on the sea floor and the nature and history of the icecaps. Gravity, seismic, aeromagnetic, geomagnetic and geothermal investigations have obtained information on the physical characteristics and structure of the rocks beneath the surface, and the nature and stability of the crust underlying the islands, the continental shelf and the continental slope. A complementary program of geodetic, topographic and hydrographic surveys has provided the necessary background maps and charts, and information about both terrestrial and marine physiography for these studies. Along with the technical surveys and investigations in the physical sciences, there have been less intensive but very relevant studies of the biology of the Arctic lands and oceans. The result of all these activities is that a great deal of reliable scientific information in a wide range of subjects is now available for an area about which very little was known two decades ago.

Much of this activity has been spurred by geological indications that conditions were favourable for the accumulation of petroleum deposits in the thick assemblages of sedimentary rocks bordering the Arctic Ocean. By 1960, petroleum exploration permits had been filed for essentially all of the land areas of the western Canadian Arctic Coast and Archipelago, and it was becoming apparent that the favourable geological conditions continued under many of the channels between the islands and under almost all of the con-

tinental shelf south of Sverdrup Channel. By 1970, exploration permits had been taken up over virtually all of this area, and over a large part of the upper portion of the continental slope. A vigorous program of geophysical and geological exploration is being pursued by the oil industry and many studies are under way in connection with the engineering and technical problems of development and transport in the arctic environment and ice-covered ocean. The role of the investigations of the Canadian Government is consequently no longer one of finding potentially favourable areas or of stimulating interest in the resources of the region; it is one of providing wise management, of learning enough about the Arctic environment, both marine and terrestrial, and its processes so that the operations connected with resource development and transport can be as safe and efficient as possible, without undue undesirable effects on the arctic terrain and ocean and its wildlife, and so that the resources of the area can be used to the greatest long-term good of the residents of the area, particularly the native peoples, and of the people of Canada as a whole. The present researches and surveys are therefore placing emphasis on charting possible shipping routes for supertankers or cargo submarines; on studying the nature and behaviour of sea ice and its effects on vessels and structures; on the problems of prevention and control of oil pollution in cold and ice-covered waters; and on the problems of constructing harbours, townsites, pipelines and overland transportation routes along the Arctic Coast. Study is being given to the unique ecosystems that have developed in the Arctic environment and their susceptibility to violent upset by relatively minor human activities. It is being realized that one of the greatest resources of Canada is its relatively unspoiled Arctic Coast, its unpolluted Arctic Ocean, and the present inhospitable but untrammelled free space and natural wildlife of the Arctic lands and oceans. The value of this resource to man, if it is not destroyed, will grow with each passing generation as free, open and unpolluted lands and waters become more scarce and more expensive to regain elsewhere in the world. It is the aim of the present researchers to facilitate the wise use of these present economic resources without at the same time adversely affecting its permanent value.

### Subsection 3.—Islands

The largest islands of Canada are in the North and all experience an arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83° 07' N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait—Viscount Melville Sound—Barrow Strait—Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

<sup>1</sup> Includes that part of Baffin Island (70,021 sq. miles) lying south of the Arctic Circle.

## Subsection 4.—Mountains and Other Heights

The predominant geographical feature in Canada is the great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet

above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

### 7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (\*), form part of the boundary between political divisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication. Elevations are given in feet above mean sea level.

<sup>4</sup> Part of the Yukon-Alaska boundary.  
<sup>5</sup> Highest point on the Canadian Arctic Islands.

## Section 2.—Geology

The 1967 Canada Year Book, at pp. 19-32, carried a detailed article on "Geology and Economic Minerals of Canada", which was prepared by W. D. McCartney of the Geological Survey of Canada. Subsequent editions of the Year Book carried an outline extracted from that article to which the reader is referred for general information on the geology of Canada, the latest appearing at pp. 17-23 of the 1970-71 edition.

### Section 3.—Federal Government Surveying and Mapping\*

The needs for maps and surveys of Canada are met mainly by the Department of Energy, Mines and Resources. Although not all Branches of this Department make surveys and compile maps, many of them are involved in such work either wholly or partly. They compile topographical, geological and aeromagnetic maps, aeronautical charts and specialized maps showing electoral district boundaries, land use and other features. In carrying out these tasks, the Department is guided partly by long-range plans based on general national needs and partly by requests from other government agencies and private enterprise. Some types of maps and surveys are also produced by provincial and private agencies and, to avoid duplication, the Department co-ordinates its work with these bodies. Other types—such as aeronautical charts—are produced exclusively by the Department.

The staff of the Department numbers about 2,700, half of whom are scientists, engineers and technicians. Each year, some 500 men are sent into the field to make surveys and to carry out research. Of the various Branches, the following are particularly concerned with surveying and mapping: Surveys and Mapping Branch (geodetic and topographic surveys, legal surveys of Canada lands, geographical atlases, electoral maps and aeronautical charts); Geological Survey of Canada (geological features); and Earth Physics Branch (geophysical maps).

**Types of Surveys.**—In the field of geodesy, the Geodetic Survey maintains a network of horizontal and vertical control points across Canada. Much of its present activity is centred on achieving greater density of control and closing gaps in Southern Canada. The ultimate goal is the establishment of at least one horizontal and vertical control point within 10 miles of any point in established and economically important areas. During the 1970 survey season, 32 field parties were involved in this activity.

The Topographical Survey is proceeding with the compilation of topographical maps. The mapping of Canada at the scale of four miles to one inch is complete, this series will be revised and updated from time to time. On the scale of one mile to one and a quarter inches, 5,000 map sheets are available of a planned 13,150. Sheets published to date (August 1971) cover most of the settled areas of Canada and certain wilderness areas of interest because of resources or defence requirements. On the relatively large scale of one mile to two and a half inches, 800 maps are available, covering all major cities and their suburbs. Wide acceptance has been found for photomaps, a relatively new map-type made possible by advances in air photography and photogrammetry. The Topographical Survey relies mostly on aerial photography in mapping and does not send out field parties.

The Legal Surveys Division is responsible for the technical management of legal surveys of land under federal jurisdiction, such as the northern Territories, national parks and Indian reserves. It also executes such surveys on behalf of administering departments, collaborates in the demarcation of provincial boundaries, prepares descriptions of electoral districts and generally provides land-surveying services to other departments. During the 1970 surveying season, this Division sent out 15 field parties.

The Surveys and Mapping Branch is the major agency in Canada for the preparation of aeronautical charts showing airports, airways and radio and other aids necessary for air navigation. As a service to map-makers, prospectors, engineers, foresters, town planners and others interested in that field, the Department maintains a National Air Photo Library containing a collection of all air photographs taken by or for the Federal Government—about 3,445,000 black-and-white prints and 22,300 colour prints. During the course of a year, the Library may receive requests for as many as 1,000,000 copies of such prints. A western branch of the Library located in the Institute of Sedimentary and Petroleum Geology in Calgary has a stock of 594,000 black-and-white and 134 colour prints.

\* Prepared by the Public Relations and Information Services, Department of Energy, Mines and Resources, Ottawa.

Geological surveys provide an inventory of the potential resources of Canada, aid in the discovery of mineral deposits, and assist in other aspects of the national economy influenced by geological factors. Each year, over 100 parties are placed in the field. Large reconnaissance projects are mounted in the northern regions of the country, and more detailed investigations in the better-known southern areas. Geological maps are published either separately or, more commonly, as part of scientific papers.

Both the Geological Survey and the Earth Physics Branch carry out geophysical surveys, resulting in maps showing such features as variations in terrestrial magnetism, gravity and seismology. The geophysicists of the Geological Survey are interested mainly in outlining local magnetic variations indicative of mineral deposits, while those of the Earth Physics Branch map the earth's total magnetic field. The Earth Physics Branch operates 23 first-order and six second-order seismic observatories throughout Canada, whose records are used in compiling and updating an earthquake zoning map of Canada of interest to architects and engineers. A gravity map of Canada is also being published and updated.

In the drafting and printing of the maps, highly advanced techniques for the automatic transfer of terrain features from air photos to drafting sheets and precise lithographing are combined to assure speedy processing of field data and the production of colourful, easily understood and relatively inexpensive maps for every type of user, from vacationer to town planner and from prospector to pilot. The Department operates a large modern plant to print the maps and charts compiled by its several Branches and by other government departments and agencies. The Surveys and Mapping Branch has a stock of 22,200,000 maps from which it distributes about 4,000,000 annually.

## Section 4.—Archaeology

The 1968 Year Book contains a special article on "Archaeology in Canada", prepared by scientists of the National Museum of Man, National Museums of Canada. The article is a review of the study of Canadian prehistory and summarizes the interpretations made, up to the point of writing, of findings by scientists working in this discipline throughout the years. The 1969 and 1970-71 Year Books covered the archaeological work undertaken in Eastern, Western and Northern Canada by the National Museum of Man staff and contract-supported field work conducted during 1968 and 1969 and the following paragraphs outline the work undertaken in the same areas during 1970 and 1971.

### 1970

**Archaeological Work in Eastern Canada.**—J. V. Wright excavated the stratified Knechtel II site on the Lake Huron shore of Bruce County, Ont. The five separate Archaic occupations range in time from 1000 B.C. to 1500 B.C. and the bone refuse from the site indicate that it functioned as a seasonal fishing station. The same archaeologist carried out a settlement pattern study of the Roebuck site located 50 miles south of Ottawa. Nine definite longhouses, ranging in length from 57 to 130 feet, were completely or partially exposed on this mid-sixteenth-century St. Lawrence Iroquois site.

D. Sanger excavated a number of sites in the Passamaquoddy Bay region of New Brunswick. Sufficient information was gathered to trace the prehistory of the area with some accuracy back to 500 B.C. Closely related to culture change in the region are shoreline changes due to sea-level rise and coastal subsidence. Sixty "Red Paint" burials were uncovered at the Cow Point site, Grand Lake, and, although very little bone survived the acid soil, nearly 400 stone tools buried with the dead were recovered from this 1500 B.C. burial site.

R. Marois discovered five sites in the Lake Abitibi region of Quebec. Most of the sites appeared to be late and, indeed, a number produced European trade goods. The stone tools, however, exhibited little change through time and these late sites may represent a continuation of the Shield Archaic tradition. If this should be the case, a direct association between the Shield Archaic and Algonkian-speaking peoples will have been established.

Contract-supported work in Eastern Canada included the following: K. C. A. Dawson, Lakehead University, carried out excavations at the Martin Bird site in northern Ontario; H. Devereux, University of Calgary, excavated a site on Red Indian Lake in Newfoundland; J. Keenlyside, University of Calgary, conducted an archaeological survey along the east coast of New Brunswick from the Pokemouche River to the Miramichi River; U. Linnaemae, University of Calgary, conducted an archaeological survey of Placentia and Trinity bays, southeastern Newfoundland; B. Preston, Nova Scotia Museum, surveyed and excavated on the Shubenacadie River drainage in Nova Scotia; and A. Tyyska, University of Toronto, carried out salvage operations at various Iroquois sites in Ontario.

**Archaeological Work in Western Canada.**—G. F. MacDonald collected approximately 60,000 lb. of shell midden from a coastal site in northern British Columbia to be used in the reconstruction of a typical shell midden planned for a new gallery in the National Museum of Man. The stratigraphic reconstruction, spanning 5,000 years of occupation of a Tsimshian winter village, will provide a backdrop for the exhibit on archaeological methods. The abandoned Haida villages of Ninstints, Kaisun and Chaatl were mapped at the same time.

R. Wilmeth conducted a brief survey at Anahim Lake, the Dean River and Nimpo Lake in the British Columbia plateau. Additional historic Chilcotin and earlier sites were recorded.

Contract-supported work in Western Canada included the following: K. Ames, Washington State University, conducted archaeological excavations at the Hagwilget site in British Columbia; C. E. Borden, University of British Columbia, investigated an early pebble tool complex near Yale in British Columbia; P. F. Donahue, University of Wisconsin, investigated ecological and cultural changes resulting from the fur trade in west-central British Columbia through test excavations at Kluskus and Algatcho; R. Inglis, Trent University, carried out excavations of waterlogged sites at Prince Rupert Harbour in British Columbia; T. C. Losey, University of Alberta, carried out excavations at the Cormie Ranch site near Edmonton in Alberta; J. F. V. Millar, University of Saskatchewan, conducted an archaeological survey at Takla and Bear Lakes in the southern Omineca District of British Columbia; D. B. Penny, University of Manitoba, conducted a survey on the upper Winnipeg River in Manitoba; B. Reeves, University of Calgary, carried out salvage operations at a buffalo jump near Calgary in Alberta; A. H. Stryd, University of Calgary, conducted housepit excavations in the vicinity of Lillooet in British Columbia; E. L. Syms, University of Alberta, conducted survey and testing in the Gainsborough Creek area of southwestern Manitoba; David Wyatt, University of Toronto, conducted archaeological excavations in the Nicola Valley of British Columbia.

**Archaeological Work in Northern Canada.**—J. V. Wright carried out an archaeological survey of the lower Back River–Lake Franklin area of northern Keewatin District in the Northwest Territories. Only late prehistoric and historic Eskimo remains were encountered and the farther the survey party moved into the interior the thinner became the evidence of human occupation. The total absence of Indian caribou hunter remains, so typical of the middle and southern Keewatin District, reinforces the hypothesis that the aforementioned groups stayed within range of the forest and exploited the barren lands only on a seasonal basis.

R. J. McGhee conducted an archaeological survey in the Mackenzie delta area of the Northwest Territories. Major excavations were restricted to two sites; a nineteenth-century caribou hunting site and a twelfth-century whaling (beluga) site. The excavation of the stratified Kittigazuit site was continued and threw additional light on the culture history of the Mackenzie Eskimos.

D. W. Clark undertook two archaeological survey projects. One was a continuing reconnaissance of sites at the Batza Téna obsidian source area on the Koyukuk River of Alaska. This survey augmented the 1969 work by producing larger samples and a broader

range of materials which extend in time from the Palaeo-Indian period to the late prehistoric period. The other survey concentrated on the Anderson River and extended from Colville Lake to the Arctic Coast, District of Mackenzie, Northwest Territories. Most of the 40 sites discovered were quite small and related to several cultural complexes. The most distinctive of these complexes belongs to the Arctic Small Tool tradition.

R. E. Morlan conducted surveys on the Bell River, the Porcupine River, and the Old Crow River in northern Yukon Territory. Several sites were extensively excavated or tested and one stratified site contained sequential occupations of the historic Kutchin.

Contract-supported work in Northern Canada included the following projects, all in the Northwest Territories: G. Fedirchuk, University of Calgary, carried out further excavations, survey and paleo-environmental studies in the Fisherman Lake Valley, southwestern Mackenzie District; B. C. Gordon, University of Calgary, conducted archaeological salvage in connection with oil exploration and development activities in the Mackenzie delta area; G. Wenzel, University of Manitoba, conducted an archaeological survey and excavation in the Chesterfield Inlet region of the District of Keewatin.

**Radiocarbon Program.**—Sixty-six radiocarbon samples were received from staff and contractors and 68 were submitted to laboratories for dating. Results were received on 49 samples and descriptions of these were prepared for publication in the journal *Radiocarbon*. Pilot studies were also initiated in obsidian hydration-dating and neutron activation analysis of trace elements, the latter in co-operation with Atomic Energy of Canada Limited.

#### 1971

**Archaeological Work in Eastern Canada.**—J. V. Wright, in co-operation with the Royal Ontario Museum, excavated the mid-fourteenth-century Nodwell site at Port Elgin in Ontario. The entire 2.1-acre ancestral Huron-Petun village was excavated. A double stockade surrounded the village, which contained 11 longhouses ranging from 42 to 140 feet in length. Another house occurred immediately outside the palisade. Although the middens were destroyed by deep ploughing, more than one ton of artifactual and refuse was recovered from the more than 1,600 pits found inside the houses.

R. Marois carried out a number of survey and excavation projects in Quebec. In co-operation with the Université du Québec à Trois-Rivières, survey and excavations were conducted in the Lake Abitibi region. Other projects included investigation of an Iroquoian site on the Saint-Maurice River near Trois-Rivières and a brief survey made on Lac Dumoine with the co-operation of the Canadian Armed Forces.

Contract-supported work in Eastern Canada included the following: L. Parent, Université de Montréal, excavated a site at Oka in Quebec; J. Lavoie, Université de Montréal, surveyed along the Northumberland Strait of New Brunswick; A. Moehr, University of Toronto, undertook the administration of the Montreal River survey in northern Ontario; J. N. Emerson, University of Toronto, undertook the administration of the re-excavation of the Donaldson site near Lake Huron in Ontario; W. Dunston, University of Manitoba, excavated a site at Howell's Lake on the Albany River drainage in northern Ontario; B. Preston carried out a survey of the Shubenacadie drainage system in Nova Scotia.

**Archaeological Work in Western Canada.**—G. F. MacDonald carried out three projects along the northwest coast of British Columbia. The lower Skeena River, between the Kitselas Canyon just above Terrace and the Khyex River in the Skeena estuary, was surveyed. Major excavations continued at a large Tsimshian village in Prince Rupert Harbour. The major feature excavated was the chief's house, the largest structure in the village, measuring 45 by 45 feet. Two fortress sites on the Skeena River were also examined and a sizable mapping and excavation project was focused on the Kitselas Canyon fortress.

R. Wilmeth continued his survey and excavation program in the Anahim Lake area of British Columbia. A large circular pit house, approximately 2,000 years old, was excavated. At the close of the season, Wilmeth served as technical supervisor in the reconstruction of an early historic Chilcotin winter lodge—a joint project of the Anahim Lake Community Association, the British Columbia 1971 Centennial Commission, and the National Museum of Man.

J. V. Wright surveyed the north shore of Lake Athabasca. Major excavations took place on one site in Alberta and another site in Saskatchewan. Material along the western half of the north shore appears to relate to the Peace River Valley of Alberta whereas the eastern section of the north shore shows stronger relationships to the north and east.

Contract-supported work in Western Canada included the following: G. F. Adams, University of Saskatchewan, excavated the Estuary and Prelate Gap buffalo jump and campsite in southwest Saskatchewan; L. Allaire, Yale University, mapped and conducted test excavations at three village sites in the Kitselas Canyon of British Columbia; W. J. Byrne, University of Calgary, carried out a salvage survey at the Suffield Military Base in Alberta; J. S. Cybulski, University of California at Santa Barbara, undertook excavation of burial caves on the British Columbia coast at the request of the local band council; P. Donahue, University of Wisconsin, continued studies involving the impact of the fur trade on the Kluskuz region of British Columbia; I. G. Dyck, University of Alberta, began a study of Archaic-period settlement patterns in central Saskatchewan; C. T. Gonsalves, Manitoba Archaeological Society, conducted salvage archaeology on a number of sites in the Red River Valley of Manitoba; B. Reeves, University of Calgary, conducted a survey of the Bow River and salvage operations near Calgary in Alberta; A. H. Stryd, University of Alberta, excavated selected pit house sites near Lillooet in British Columbia; L. Symes, University of Alberta, carried out salvage archaeology in southwestern Manitoba.

**Archaeological Work in Northern Canada.**—D. W. Clark carried out two projects. The first, done in collaboration with the Alaska Methodist University in Anchorage, Alaska, concentrated on two sites at the mouth of the Afognak River in the Kodiak region of Alaska. Data relating to early maritime cultures (2000 - 4000 B.C.) on the north Pacific coast was recovered and is of pertinence to the prehistory of the West Coast of Canada. The other project concentrated on the obsidian sources on the Koyukuk River of interior northwestern Alaska. This source of a desired flaking material has served as a focus for human exploitation for the past 11,000 years.

R. E. Morlan, in response to announced plans for hydro-electric development in south-central Yukon Territory, undertook the survey of three of the four proposed reservoirs in the region. Only one of these three areas proved to be productive—the Aishihik River drainage which will require intensive salvage operations.

Contract-supported work in Northern Canada included the following projects, all in the Northwest Territories: B. Gordon, University of Calgary, continued excavations on the Upper Thelon River, in the District of Mackenzie; J. Cinq-Mars, University of Wisconsin, carried out survey and excavation in the Yellow, Tate, Stewart and Carajou lakes region in the District of Mackenzie; J. V. F. Millar, University of Saskatchewan, conducted archaeological survey of the Liard River, southwestern Mackenzie District; P. Schlederman, University of Calgary, conducted survey and excavation in Cumberland Sound, Baffin Island, District of Franklin; G. Wenzel, University of Manitoba, carried out excavations at Chesterfield Inlet, District of Keewatin.

**Radiocarbon Program.**—Toward the end of 1971, 50 radiocarbon samples received from staff and contractors had been processed and catalogued; 23 samples were submitted to laboratories for dating. The results were received on 39 samples including samples submitted earlier. Forty-nine obsidian samples from both source localities and archaeological sites in British Columbia were subjected to neutron activation analysis and provided knowledge on the trade of obsidian between coastal and interior British Columbia.

## Section 5.—Climate and Time Zones\*

### Subsection 1.—Climate

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1931 to 1960 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperature may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in Table 8 are the sum of the total rainfall and one tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one hundredth of an inch of rain or one tenth of an inch of snow has fallen.

\* Subsections 1 and 2 of this Section were prepared by the Atmospheric Environment Service, Toronto. A comprehensive study on The Climate of Canada, prepared by the (then) Canadian Meteorological Service, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data. A special article on The Climate of the Canadian Arctic appears in the 1967 Year Book at pp. 55-74, an augmented reprint of which is also available from the Atmospheric Environment Service.

<sup>1</sup> Total rainfall and one tenth of the total snowfall.

## Subsection 2.—Atmospheric Environment Service

The Atmospheric Environment Service is a main component of the newly formed federal Department of the Environment. Its functions include those that have been carried out for many years by the Canadian Meteorological Service which, in effect, has been transferred under a new title from the Ministry of Transport to the new Department. The Service intends to involve itself further in research into atmospheric processes affecting the environment and in the practical application of this knowledge. The services, which are provided to meet civil requirements throughout Canada, are largely organized on a regional basis with offices located at Vancouver, Edmonton, Winnipeg, Toronto, Montreal

and Moncton. Each region operates several categories of offices with assigned levels of responsibility for the provision of weather services. Main weather offices are located at major centres across Canada. Each serves an area about the size of a large province, providing weather services to the general public and additional specialized services to groups and agencies concerned with aviation, water resources, forestry, agriculture, road and rail transportation, construction and marine activities. Headquarters of the Service is located in a new building at 4905 Dufferin St., Toronto.

Because weather services are designed to meet the special needs of each group, they are as varied as the functions of the consumers. In general, they fall into about three categories. First, current data representing the latest observations of the local weather taken at official observing sites across the country are made available and meet many of the needs of both the public and the economy. Hourly readings of temperature, humidity, cloud cover, precipitation and wind speed and direction are of interest to some, are of concern to others and, at times, are vital to such activities as aviation, flood forecasting, shipping, snow removal and recreation. Daily values of temperature extremes and precipitation amounts are likewise of use to others.

Secondly, short-range and medium-range forecasts are provided for certain areas and for specific locations, such as aerodromes, canals, fruit and vegetable growing areas and large urban centres. The forecasts for the general public are issued by the main weather offices and are distributed across Canada by relay to the radio and TV stations and to the press, and by commercial communication channels.

A third service has to do with technical applications using historical and statistical weather data. All observed weather data are processed and stored to provide a historical record of the Canadian climate. These data are analysed, quality-controlled and published in a variety of forms and may be applied to the special problems of agriculture, forestry, water resources, and to other areas of Canadian activity. Advisory services are available at most weather offices so that each inquirer may receive the information needed in the form best suited to his needs; services of meteorological specialists are available at Toronto Headquarters and at some weather offices. Special analytical projects are undertaken requiring computer analysis of archived data to provide advice to industry, science and government. Although forecasts are issued only at the main weather offices, secondary weather offices staffed by trained presentation technicians are supplied with sufficient information via the meteorological communication network to enable them to meet a wide range of localized inquiry. Requests for services at a number of secondary offices are such that a professional meteorologist is on staff to provide consultation-type service.

There are now 11 main weather offices and 43 secondary weather offices in the weather service system. In addition, local meteorological services are available from Canadian Forces Weather Offices at Department of National Defence bases across the country.

A developing trend in the organization of meteorological services is the establishment of a Scientific Support Services group within Regional Meteorological Offices, which is capable of examining in detail meteorological influences on the activities of major sectors of the economy and of developing specialized services that might be required, taking into account the geographical and topographical features of the area concerned. For example, in British Columbia, mutually beneficial co-ordination and co-operation have resulted in arrangements between provincial authorities and the Regional Office in Vancouver for programs of considerable provincial importance, including the establishment of rain and snow gauge networks for hydrology studies, support for the Columbia River control system, provision of forest fire danger and slash-burning forecasts, and the provision of a frost-warning service for the fruit growing areas of the interior.

**Weather Observing Stations.**—Several networks of weather observing stations provide the information that forms the basis for the forecasts and advisory service and for the climatological and technical services referred to above. In June 1971, official meteorological observations were taken and recorded at 2,460 weather reporting stations

in Canada. There are several classes of stations, ranging from 280 first order reporting stations, mainly at aerodromes, where hourly observations of all aspects of the weather are recorded, to the 2,000 co-operative observing stations where volunteer observers make daily observations of rainfall, snowfall and temperature. Although there are vast areas of the country where the weather observing stations are several hundred miles apart, the weather in the settled parts of the country is recorded hourly at first order reporting stations every 100 miles or so and daily at co-operative climatological stations about 25 miles apart.

Some first order weather stations do not report hourly but make complete weather observations every six hours. All hourly and six-hourly reports prepared in a special number code are relayed almost instantaneously by the meteorological communications network to all weather offices across the country and are dispatched at high speed to other countries requiring Canadian observations. At the end of the month, all weather observing stations send their official observation report forms to a regional collection office, from which they are sent to Headquarters for final quality control, processing and publication. These data become part of the climatological archives and serve as a permanent record of Canadian weather. The observing personnel at most of these stations are either employees of the Service or are Canadian Forces personnel, and the remainder are employed by the Ministry of Transport or are individuals working under contract or through a co-operative arrangement by which various transportation and communication companies take observations in return for special services.

*The new Atmospheric Environment Service Building in Toronto. Here, using highly sophisticated computer capabilities and the large banks of data collected through a vast weather observing network, the meteorologist is able to provide the climatic information demanded by a weather-sensitive population.*

Twice daily, at 36 locations throughout the country, upper air observations are made from ground level to altitudes up to 100,000 feet. Pressure, temperature and humidity measurements are made automatically by radiosonde instruments carried aloft by balloons and this information is relayed by a system of radio signals to ground receiving stations. The wind directions and speeds aloft are determined by measuring the drift of the balloon and attached radiosonde instruments using radar or radio direction equipment. The upper air observations, like those of the surface weather, are distributed rapidly to weather offices, and at the end of the month summary report forms are sent to Headquarters where the data are quality-controlled, processed, published and archived.

There are more than 2,000 climatological observing stations in Canada where observers record the precipitation and temperature extremes and send their climatological reports on monthly data sheets to Regional Data Collection Centres and then to Headquarters. Most of the observers serve on a voluntary basis and willingly spend several hours a month on this useful hobby. In addition, many governmental and industrial organizations have incorporated brief climatological duties into the general work program of selected employees. The number of weather observing stations has been growing at an average rate of more than 100 a year for the past decade, and thus a steadily increasing historical record of Canadian weather is available to assist Canadians in all economic pursuits. These data are frequently used in investigations of agricultural potential and irrigation, hydro-electric, industrial and other problems of a wide variety.

**Meteorological Communications.**—The meteorological communications system is the lifeline that provides the flow of information essential to a reliable weather information service. Since weather conditions are constantly changing, the value of reports of weather observations falls off rapidly and the time between the taking of the observation and its relay to the public or use in a forecast must be kept as short as possible. For a country the size of Canada with many sparsely settled areas, rapid communication presents difficult problems and requires unique solutions.

Weather offices and weather stations are linked coast-to-coast by land-line teletype and, in remote northern areas, by radio or radio teletype. The land-line teletype circuits are leased from commercial wire companies and operated by the Atmospheric Environment Service; most of the radio circuits are operated by the Telecommunications and Electronics Branch of the Ministry of Transport. Relay of all weather data is controlled by a centrally located computer in Toronto.

In addition to the foregoing, two long-line weather facsimile networks transmit information in the form of weather charts, from central forecast offices to weather offices from coast to coast and into the northern and ocean areas by radio facsimile. Icebreakers and other ships equipped with receivers thus have the latest weather charts regularly available for guidance in their operations.

The Atmospheric Environment Service operates 37,000 airline miles of teletype circuit serving 378 stations with 569 facility connections, and the meteorological facsimile system serves 100 stations equipped with 132 connections and uses 19,225 miles of network circuits.

**Specialized Services.**—Although weather services are organized on a regional basis, certain specialized services can be most economically provided from a central location. Such a service is the ice reconnaissance and forecasting program to support marine activity in ice-congested waters; the program is directed from Toronto and the Ice Forecast Centre is located in Halifax. Specially equipped aircraft are used in the aerial phase of the program and ice charts can be passed from the aircraft directly to icebreakers via radio facsimile. Other phases of the program are the provision of valuable supplemental data from ship-board ice observers assigned to eight Canadian Coast Guard icebreakers, and the operation of 120 ice reporting shore stations and 60 weekly reporting stations where ice thickness is measured. Forecast ice charts are also dispatched via facsimile circuits and mailed to a wide variety of personnel and organizations having need of this information.

Providing another specialized service, the Climatology Division at the Atmospheric Environment Service Headquarters in Toronto, using the unique capabilities of a computer and large banks of weather data which have been quality-controlled and stored so that they are available for rapid access by computer, is able to provide statistical material of a highly sophisticated nature. These computer-produced climatological data allow the full range of relevant historic weather information to be applied to an increasingly wide variety of problems in which human, economic and physical activities and their weather-sensitive factors are being examined. In addition, hydrometeorological specialists are responsible for meteorological studies in support of water resources activities involving the rivers, reservoirs and lakes of Canada. Such studies include the provision of criteria for the proper design and operation of water-control structures, techniques for use in lake level, river flow and flood forecasting, and assistance in water supply and pollution investigations.

The scientific and technical orientation of modern life have evolved, in part, because people are unwilling to accept the apparent vagaries of weather—the unexpected occurrence of frost, flood, blizzard and storms at sea—without applying scientific and technical knowledge toward an understanding of the weather as a major environmental influence. People wish to be forewarned so that precautions can be taken and hardships mitigated. They are able to establish and successfully operate warning and protective procedures employing emergency systems and backup facilities, and to direct or adjust operations to save life and protect property from high wind, extreme cold, frost, flood and storm.

**Research and Development.**—The extent to which modern meteorological science can aid in providing better services has been only partially explored. At the Service Headquarters in Toronto, research and development work is a continuing activity with changing priorities as a constant search is made for better forecasting techniques and for improvements in the day-to-day meteorological services. Current research in this field is discussed in some detail in Chapter VIII on Scientific and Industrial Research.

**World Meteorology.**—Canada has always co-operated with other nations in the exchange of weather data and other important matters relating to international meteorology. A major area of international co-operation is with the United States Weather Bureau which is now a part of Environmental Science Services Administration (ESSA). The two national meteorological organizations exchange data freely. Co-operative arrangements are also made for the use by Canada of data processed by the large ESSA computer facilities in Washington. Other agreements cover the marine forecasting program on the Great Lakes relating to standardization of methods of ship observations, criteria for issuing weather warnings and other similar matters.

The air that circles the earth is an international resource. Research studies of the atmosphere and the prediction of weather elements require global surface and upper air observation networks, the international exchange of data via modern high-speed communications links, and the broadscale processing of data by computers.

World meteorology is highly organized on a global basis through the World Meteorological Organization (WMO) with headquarters in Geneva and a participating membership of 132 states and territories. Canada is an active member of this world organization and fully supports its many goals. A major portion of the WMO technical program is now devoted to the World Weather Watch (WWW)—a worldwide plan for upgrading and modernizing meteorological observing networks and national weather services.

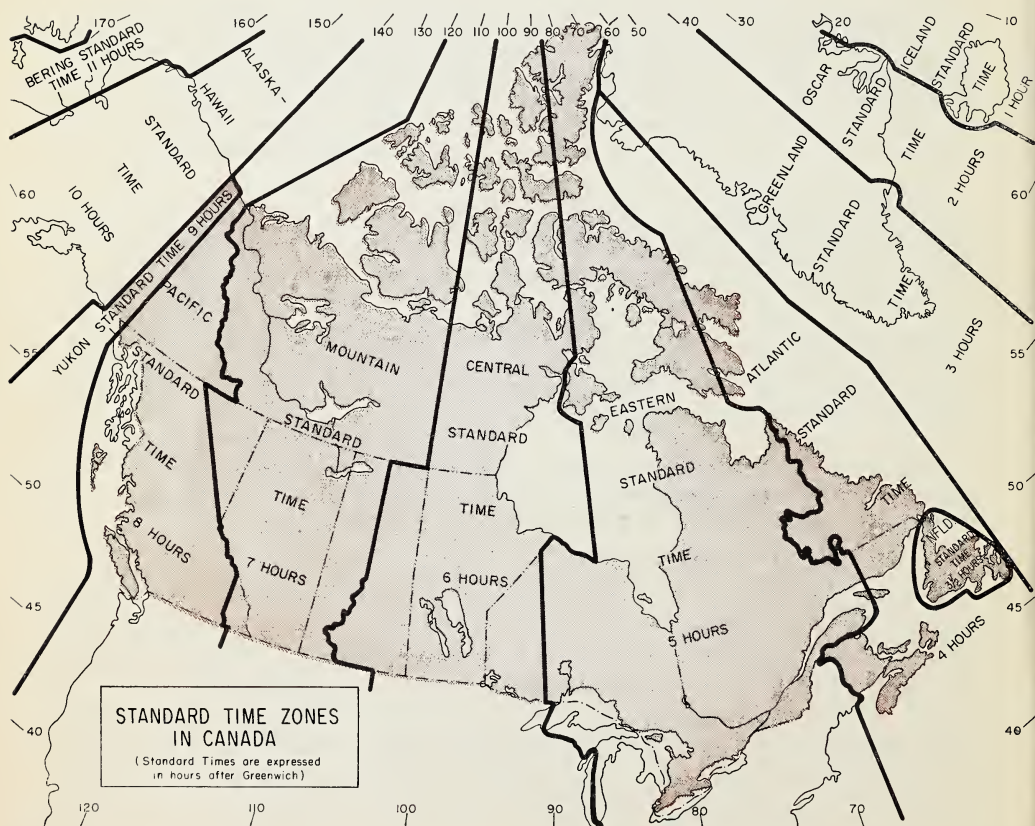

The unprecedented opportunities afforded by the development of earth-orbiting meteorological satellites and the availability of high-speed electronic computers are being examined in depth and both developed and developing countries are co-operating fully so that all member states of the WMO will derive full benefits from modern technology and, in turn, will have improved meteorological services.

### Subsection 3.—Standard Time and Time Zones

The rotation of the earth on its axis was considered at one time to be entirely uniform and the unit of time, which is the second, was defined as  $1/86400$  of the mean solar day. Improvements in clocks and in the methods of making astronomical observations demonstrated conclusively that there are irregularities in earth rotation too large to be neglected. So, in 1957 the International Committee on Weights and Measures defined the second in terms of the annual motion of the earth about the sun, called ephemeris time. Also in 1957 the first caesium atomic clock was calibrated with respect to ephemeris time, but not until 1968 was the caesium second adopted as the international standard. The second today is defined as 9,192,631,770 cycles of a transition of the caesium atom.

Atomic timekeepers, with a precision of a millionth of a second a day, control Canada's time service. The same is true of CHU (3330 kHz, 7335 kHz, 14670 kHz), the continuous broadcast of Canadian time which contains a bilingual voice announcement of time each minute.

Standard Time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone ideally extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians  $15^\circ$  of longitude apart. In practice, the zone boundaries are quite irregular for geographic and political reasons. Universal Time (UT) is the time of the zone centred

on the zero meridian through Greenwich. Each of the other time zones is a definite number of hours ahead of or behind UT to a total of 12 hours, at which limit the international date line runs roughly north-south through the mid-Pacific.

Canada has seven time zones, the most easterly being Newfoundland Standard Time, three hours and thirty minutes behind UT and the most westerly Yukon (west) Standard Time, nine hours behind UT. In between, from east to west, the remaining zones are called Atlantic, Eastern, Central, Mountain, Pacific and Yukon (east). Yukon (east) and Pacific Standard in effect constitute a single zone.

**Legal Authority for the Time Zones.**—Time in Canada has been considered a matter of provincial rather than federal jurisdiction. Each of the provinces and the Northwest Territories has enacted laws governing the standard time to be used within its boundaries. These laws determine the location of the time zone boundaries. Lines of communication, however, have sometimes caused communities near the boundary of a time zone to adopt the time of the adjacent zone, and in most cases these changes are acknowledged by amendments to provincial legislation. During the two World Wars, there were federal enactments concerning time but these were of temporary duration. In 1941 the Dominion Observatory time was declared the time to be used for official purposes in Canada.

**Daylight Saving Time.**—Although Daylight Saving Time had been urged in many quarters before World War I, its first use in Canada came as a federal war measure in 1918. Today most of the provinces have legislation controlling the provincial or municipal adoption (or rejection) of Daylight Saving Time; in the other provinces the authority is left to the municipalities. By general agreement, Daylight Saving, where it is observed, is in force for six months from the last Sunday in April to the last Sunday in October.

## Section 6.—Public Lands

### Subsection 1.—Federal and Provincial Public Lands

The total area of Canada and the areas of the individual provinces and territories are classified by tenure in Table 9. All lands, with the exception of those privately owned or in process of alienation, are Crown lands under the jurisdiction of either the federal or the provincial governments. In the table, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from provincial government sources.

#### 9.—Total Area classified by Tenure (circa) 1971

Item	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.

7. Provincial parks.....	3,190	1,821	2,357	10,134	—	98,613
8. Provincial forests.....	5,415	120,024	9,267	97,511	—	239,899
<b>Totals.....</b>	<b>251,000</b>	<b>251,700</b>	<b>255,285</b>	<b>366,255</b>	<b>1,511,979</b>	<b>3,851,809</b>

<sup>1</sup> Includes leased land, which is, however, a minor portion of the total. <sup>2</sup> Includes Gatineau Park (137.5 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically national parks. <sup>3</sup> Includes 2,656 sq. miles of Crown land under lease. <sup>4</sup> Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as national parks. <sup>5</sup> Includes that part of Wood Buffalo Park in Alberta (13,650 sq. miles).

<sup>6</sup> That part of Wood Buffalo Park in N.W.T. <sup>7</sup> Federal Crown lands transferred to the administration of the Yukon and Northwest Territories encompassing established communities.

**Federal Public Lands.**—Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, ordnance and admiralty lands, national parks and national historic parks and sites, forest experiment stations, experimental farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 9). These lands are administered under the Territorial Lands Act (RSC 1970, c. T-6) and the Public Lands Grants Act (RSC 1970, c. P-29).

The largest areas under federal jurisdiction are in the Northwest Territories and the Yukon Territory where only 93 sq. miles of a total area of 1,511,979 sq. miles are privately owned and 665 sq. miles are under the administration of the Territorial Governments. (See paragraph two of the item below.)

**Provincial and Territorial Public Lands.**—Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930, the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 133 sq. miles under federal or provincial administration.

The transfer by the Federal Government of significant areas of land within and immediately surrounding established communities in the Northwest Territories and the Yukon Territory to the administration of the respective Territorial Governments began in September 1970. In that year, four such transfers were completed, three in the Northwest Territories and one in the Yukon: land encompassing the city of Yellowknife (about 220 sq. miles), the town of Inuvik (about 95 sq. miles) and the communities of Rae-Frank

Channel-Calzo (about 110 sq. miles) in the Northwest Territories, and the city of Whitehorse (about 240 sq. miles) in the Yukon Territory, a total of about 665 sq. miles. Similar transfers will be completed during the next four years.

Information regarding provincial public lands may be obtained from the respective governments. (See the Directory of Sources of Official Information, Chapter XXVI, under "Lands and Land Settlement".)

### Subsection 2.—National Parks

Canada's national parks are the result of the Federal Government's efforts to preserve natural areas of outstanding scenic and biological interest for the benefit of the public. The national park concept, which began with the establishment of Yellowstone National Park in the United States in 1872, was soon afterwards applied in Canada. In 1885, the Canadian Government reserved from private ownership the hot mineral springs of Sulphur Mountain in what is now Banff National Park. Two years later, this 10-sq.-mile reserve was extended to 200 sq. miles and named Rocky Mountains Park, the first federal park in Canada. In the same year, Queen Victoria Niagara Falls Park, the first provincial park, was established by the Ontario Government to protect the public's right to view the great natural wonder of Niagara Falls. Two land reserves in southern British Columbia—Yoho and Glacier—were made by the Federal Government in 1886, a reserve of 54 sq. miles in the Waterton Lakes area of southern Alberta in 1895, and an area of 5,000 sq. miles around Jasper, Alberta, in 1907. These four reserves, all in the western mountain ranges, together with Rocky Mountains Park, formed the nucleus of the national park system after the Dominion Forest Reserves and Parks Act was passed by Parliament in May 1911. Concurrently, a distinct National Parks Branch was created in the Federal Government to protect, administer and develop the parks.

By 1930, nine more national parks had been established. Three of these were in Ontario and consisted of federally owned Crown land or land held in trust for Indians. One in Saskatchewan and one in Manitoba were former federal forest reserves. Wood Buffalo National Park, a 17,300-sq.-mile area straddling the Alberta-Northwest Territories border, was established as a refuge for the largest surviving herd of wood buffalo in North America. Elk Island National Park near Edmonton was also established as a preserve for buffalo, and Mount Revelstoke and Kootenay National Parks, scenic areas in southern British Columbia, were established by agreement between the Federal and British Columbia Governments.

The parks added to the system since 1930 were set up with the co-operation of provincial governments which made lands available for national park purposes. All public lands suitable for national parks are now under the administration of provincial and territorial governments and a new national park usually is established by Act of Parliament after the land for it has been acquired by the provincial government and transferred, together with all its natural resources, to the Federal Government.

National parks are now under the jurisdiction of the Minister of Indian Affairs and Northern Development and are administered by the National and Historic Parks Branch under the National Parks Act, 1930 (RSC 1970, c. N-13) and various park regulations. The purpose of the parks and the objectives of their management are set out in the Act, which dedicates the parks to the people of Canada for their "benefit, education and enjoyment" and states that they are to be maintained and used so as to leave them unimpaired for the enjoyment of future generations.

An important step in the evolution of national park administration was taken when all policies concerning the parks were reviewed, amended and consolidated in a statement that was approved by the Federal Government and announced in the House of Commons

on Sept. 18, 1964. Following are the main points of this policy statement, which will guide administration and provide objectives for planning and development.

- (1) National parks are established to preserve for all time the most outstanding and unique natural features of Canada for the benefit, education and enjoyment of Canadians as part of their natural heritage. They are dedicated forever to one use—to serve as sanctuaries of nature for rest, relaxation and enjoyment. No exploitation of resources for any other purpose is permitted. All development must contribute to public enjoyment and conservation of the parks in a natural condition.
- (2) Zoning will be used to guide development and to preserve park values. Visitor services will be grouped generally into visitor service centres, a definition that applies to existing town sites.
- (3) National parks cannot meet every recreational need; the most appropriate uses are those involving enjoyment of nature and activities and experiences related to the natural scene.
- (4) The Federal Government assumes the cost of administration and protection in the parks and provides basic facilities for public use, such as roads, trails, campgrounds, picnic areas, nature interpretation and utilities. Other facilities beyond basic requirements, such as hotels, motels, restaurants, gas stations, stores and other special services, are provided by private enterprise.
- (5) Park residents and businesses should be in the same economic position as those operating outside the national parks and this principle governs the approach to charges, rentals and fees. The users of special services such as swimming pools, marinas, golf courses and fully serviced campgrounds should pay the operation and maintenance costs of these publicly operated facilities. In general, permanent and seasonal residents should be limited to persons providing basic services to the park community.
- (6) All decisions affecting public development and the activities of private enterprise must be governed by the national interest as expressed by the National Parks Act.

In addition to the national parks, which preserve natural features, national historic parks and sites commemorate events of national importance and preserve historic landmarks or objects of historic, prehistoric or scientific interest that are of national importance.

Early historic parks were created in 1917 and 1918 and, by 1971, there were 51 major national historic parks and sites and some 600 plaques commemorating personages or events across the country. A site is declared of national historical significance by the Minister of Indian Affairs and Northern Development on the recommendation of the Historic Sites and Monuments Board of Canada, an advisory board whose members represent all provinces. In 1967, a National Historic Sites policy statement was approved by the Board, accepted by the Minister and tabled in the House of Commons for the information of Parliament. One of the main points of that policy statement recognized the need for a comprehensive long-range historic sites program, establishing proper thematic and regional priorities.

The national parks and national historic parks and sites are administered by a director, three assistant directors and three regional directors who are responsible for operations in the Western Region, the Central Region (Ontario and Quebec) and the Atlantic Region. Each regional director consults with the representatives of the staff components of the Branch—Financial and Management, Personnel, National Parks Service, National Historic Sites Service, and Program Co-ordination and Property Management. A resident superintendent manages each park and has the assistance of a staff of park wardens who protect the park and its natural features and enforce park regulations; park naturalists who explain the park to visitors and offer various educational services; and other administrative, maintenance, and visitor service personnel.

Each park is being developed to yield the recreational potential for which it is suited. A program was initiated in 1970 to encourage national, provincial and local associations and private citizens to express their views at special public hearings on development plans for specific parks. Sightseeing, camping, fishing, hiking, photography and nature study are the most popular forms of recreation common to the 19 parks now accessible to the public. There are campgrounds in almost every park; daily charges are \$1.50, \$2.00 or \$2.50 a day, depending on the services provided. Motor vehicles may enter parks in the

Twenty major "wild" rivers in the Yukon Territory were under study in the summer of 1971 to gain knowledge of their natural values and recreational potential. This project of the National and Historic Parks Branch of the Department of Indian Affairs and Northern Development was carried out by university students who travelled the waterways by canoe.

Atlantic Provinces free of charge but an admission fee, varying from 25 cents for a single entry to \$5 for an annual licence good for all parks, is payable on entering all parks in Western Canada and Point Pelee National Park in Ontario.

In order to accommodate the increasing number of visitors to Canada's national parks and to include representative and rare examples of the Canadian landscape, Canada's national parks system has, in the past few years, expanded more than at any other time in its history. In addition to the parks listed and described in Table 10, two areas in the Northwest Territories have been reserved for study as a basis for planning future national parks—a 2,860-sq.-mile area around Fort Reliance on the East Arm of Great Slave Lake and an 870-sq.-mile area along the South Nahanni River. The major national historic parks and sites are listed and described in Table 11.

## 10.—Location, Year Established, Area and Characteristics of National Parks

Park	Location	Year Estab- lished	Area  sq. miles	Characteristics
<b>National Parks</b>				
Terra Nova.....	On Bonavista Bay, New- foundland, 160 miles north of St. John's.	1957	153.0	Maritime area, rocky headlands and for- ests, salt and freshwater sport fishing. Serviced campgrounds and cabin accom- modation.
Gros Morne.....	On western coast of New- foundland, about 50 miles northwest of Cor- ner Brook.	1970	650.0	Coastal area rugged in nature with section of Long Range Mountains, fiord-like lakes, forests and waterfalls. Good fish- ing. Temporary campgrounds and other facilities operational by 1972.
Prince Edward Island..	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by high- way. Motel and cabin accommodation. Serviced and semi-serviced camp- grounds.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coastline with mountain- ous background. Fine seascapes. Re- creational opportunities. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Kejimikujik.....	In south-central Nova Scotia, about 40 miles northwest of Liverpool and 50 miles southeast of Digby.	1969	147.2	Inland park with many lakes and rivers. Hiking, canoeing, semi-serviced camp- grounds, swimming, interpretation pro- gram, picnic areas. Park contains his- toric Micmac Indian petroglyphs (rock carvings). Accessible by highway.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Cabin accommodation. Serviced and semi-serviced campgrounds. Summer recreation.
Kouchibouguac.....	On northern section of Northumberland Strait, about 55 miles north of Moncton, N.B.	1969	90.0	Maritime park with 15½-mile sweep of off- shore sandbars offering excellent boating and fishing. Good fishing in many streams, rivers, lakes and ocean waters. Temporary campgrounds and other facil- ities.
Forillon.....	Occupies most of Forillon Peninsula which juts from Quebec's Gaspé Peninsula into St. Law- rence Gulf.	1970	92.0	Coastal area with rugged cliffs and rolling, forested inland areas. Development re- flects area's natural history and its colourful human background. Temporary visitor facilities, including campgrounds.
La Mauricie.....	In central Quebec near Trois-Rivières.	1970	165.0	Heavily wooded section of Laurentian Mountains containing many lakes with excellent fishing. Temporary visitor facilities.
Georgian Bay Islands..	In Georgian Bay, near Honey Harbour, Ont.	1929	5.3	Recreational and camping area. Unusual geological formations on Flowerpot Is- land. Accessible by boat from nearby mainland points. Serviced and semi- serviced campgrounds on Beausoleil Is- land. Picnic areas.
Point Pelee.....	On Lake Erie near Leam- ington in southwestern Ontario.	1918	6.0	Wildlife sanctuary. Remarkable beaches, marsh area, southern flora, nature trail. Staging ground for migratory birds. Accessible by highway. Serviced camp- grounds.
St. Lawrence Islands...	In St. Lawrence River between Brockville and Kingston, Ont.	1914	1.2	Mainland area and 17 islands among the Thousand Islands. Recreational and camping area. Accessible by boat from nearby mainland points along provincial highway. Serviced campgrounds.

## 10.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Estab- lished	Area  sq. miles	Characteristics
<b>National Parks— continued</b>				
Pukaskwa.....	On north shore of Lake Superior near Marathon and 150 air miles from Sault Ste. Marie.	1971	725.0	A newly created and still undeveloped park forming part of the Precambrian Shield. Wilderness area, including 50 miles of rugged lake shore, swift-flowing rivers and streams and many lakes.
Riding Mountain.....	Southwestern Manitoba, west of Lake Manitoba.	1929	1,148.0	Wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds. Summer recreation. Skiing in winter.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Summer recreational area. Accessible by highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Banff.....	Western Alberta, on east slope of Rockies, 65 miles from Calgary.	1885	2,564.0	Magnificent scenic mountain area; noted resorts, Banff and Lake Louise. Mineral hot springs. Summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Elk Island.....	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular summer recreational area. Accessible by highway. Cabin accommodation and serviced campgrounds.
Jasper.....	Western Alberta, on east slope of Rockies, 235 miles from Edmonton.	1907	4,200.0	Mountainous area and noted wildlife sanctuary. Majestic peaks, icefields, beautiful lakes and noted resort, Jasper. Mineral hot springs. Summer and winter sports. Accessible by rail and highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier International Peace Park. Mountainous area with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Glacier.....	Southeastern British Columbia on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Climbing, skiing, camping. Accessible by Trans-Canada Highway and railway. Visitor accommodation. Semi-serviced campgrounds.
Kootenay.....	Southeastern British Columbia on west slope of Rockies.	1920	543.0	Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommodation. Serviced and semi-serviced campgrounds.
Mount Revelstoke.....	Southeastern British Columbia, on west slope of Selkirks.	1914	100.0	Rolling mountain-top plateau with colourful alpine meadows and mountain lakes. Championship ski runs and ski jump in winter. Campgrounds.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and lodge accommodation. Serviced and semi-serviced campgrounds.

**10.—Location, Year Established, Area and Characteristics of National Parks—concluded**

Park	Location	Year Estab- lished	Area  sq. miles	Characteristics
<b>National Parks— concluded</b>				
Pacific Rim.....	On western coast of Van- couver Island, B.C., near communities of Tofino and Ucluelet.	1970	150.0	Coastal environment area with sandy beaches, numerous islands, rain forests, lakes and the historic Lifesaving Trail. Swimming, fishing and surfing. Camp- grounds.
Wood Buffalo.....	Partly in Alberta and partly in Northwest Ter- ritories, between Atha- basca and Slave Rivers.	1922	17,300 <i>Alta.,</i> <i>13,650</i> <i>N.W.T.,</i> <i>3,650</i>	Immense region of forests and open plains. Mainly a wildlife sanctuary. Home of largest remaining herds of plains bison and wood bison on the North American Continent. Accessible from Fort Smith, N.W.T.

**11.—Location, Year Established and Characteristics of National Historic Parks and Sites**

Park	Location	Year Estab- lished	Characteristics
Signal Hill.....	St. John's, Nfld.....	1956	Site of 1762 battle between French and British and of many fortifications. Marconi made first transatlantic wireless transmission here in 1901.
Castle Hill.....	Placentia, Nfld.....	1968	Ruins of harbour fortifications begun by the French about 1664. Interpretation centre.
Fort Amherst.....	Prince Edward Island, near Rocky Point.	1967	Remaining earthworks of British fort built after 1758.
Fortress of Louisbourg....	Cape Breton Island, N.S., 25 miles from Sydney.	1940	Walled town built by French 1720-45 and de- molished by British 1759. Being partially reconstructed.
Fort Anne.....	Annapolis Royal, N.S.....	1917	Site of French fort first built about 1695-1708, finally captured and occupied by British in 1710. Museum and well-preserved earth- works.
Alexander Graham Bell...	Baddeck, N.S.....	1969	Museum containing mechanical and documen- tary records of research by the inventor.
Grand Pré.....	Grand Pré, N.S.....	1961	Commemorates the story of the Acadians and the New England Planters. Museum.
Halifax Citadel.....	Halifax, N.S.....	1956	Fortress constructed in 1820s and in 1850s. Museum.
York Redoubt.....	Halifax, N.S.....	1969	Perimeter harbour defence installations in use from 1793 to 1945.
Prince of Wales Martello Tower.....	Halifax, N.S.....	1951	Martello tower built by British, 1796-98.
Port Royal Habitation....	Port Royal, N.S., eight miles from Annapolis Royal.	1940	Reconstruction of "Habitation", first fort built in 1605 by Champlain and DeMonts.
Fort Beauséjour.....	New Brunswick, near Sack- ville.	1926	Site of French fort erected in mid-1700s. Mu- seum.
Fort Gaspéreau.....	Near Port Elgin, N.S.....	1923	Site of 1751 French fort.
Carleton Martello Tower.	Lancaster, N.B.....	1924	Harbour defence built during War of 1812.
St. Andrews Blockhouse..	St. Andrews, N.B.....	1938	Built during War of 1812.

# 11.—Location, Year Established and Characteristics of National Historic Parks and Sites —concluded

Park	Location	Year Estab- lished	Characteristics
Cartier-Brébeuf Park . . . .	Quebec, Que. . . . .	1969	Possible wintering site of Jacques Cartier, 1535-36.
Quebec City Walls . . . . .	Quebec, Que. . . . .	..	Fortifications built by British in 1820s against feared American attack.
National Battlefields Park	Quebec, Que. . . . .	..	Landscaped park on site of 1759 Battle of the Plains of Abraham.
Fort Chambly . . . . .	Chambly, Que. . . . .	1940	Fort built by the English in 1709-11. Museum.
Coteau-du-Lac . . . . .	Coteau-du-Lac, Que. . . . .	1929	Site of fort built in 1779.
Fort Lennox . . . . .	Île aux Noix, Que., near St. Paul.	1940	Fort built by the French in 1759.
Laurier House . . . . .	Ville-des-Laurentides, Que..	1941	Period restoration relating to early life of the famous Canadian Prime Minister.
Bellevue House . . . . .	Kingston, Ont. . . . .	1964	House lived in by Sir John A. Macdonald, first Prime Minister of Canada, about 1848.
Fort Malden . . . . .	Amherstburg, Ont. . . . .	1940	Site of defence post built in 1797-99. Museum.
Fort Wellington . . . . .	Prescott, Ont. . . . .	1940	Military garrison 1812-66.
Brock Monument . . . . .	Queenston Heights, Ont. . . .	<sup>1</sup>	Monument commemorating British Major-General Isaac Brock, killed during the 1812 Battle of Queenston Heights.
Fort George . . . . .	Niagara-on-the-Lake, Ont. . .	<sup>1</sup>	Reconstruction of British fortification built in 1797-1801.
Woodside . . . . .	Kitchener, Ont. . . . .	1954	Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada.
Fort Prince of Wales . . . . .	Northern Manitoba, near Churchill.	1940	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry . . . . .	Manitoba, 20 miles north of Winnipeg.	1951	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Batoche . . . . .	Near Duck Lake, Sask. . . . .	1954	Site of final battle of Northwest Rebellion, 1885.
Fort Walsh . . . . .	Merryflat, Sask. . . . .	1926	Royal North West Mounted Police post established in 1875 in Cypress Hills Indian territory.
Fort Battleford . . . . .	Saskatchewan, four miles south of North Battleford.	1951	North West Mounted Police post built in 1876. Museum.
Rocky Mountain House . . .	Rocky Mountain House, Alta.	1970	Trailer interpreting the history of this important fur trade post site.
Fort Langley . . . . .	Fort Langley, B.C. . . . .	1958	Partially restored trading post founded 1850. Colony of British Columbia proclaimed here 1858.
St. Roch . . . . .	Vancouver, B.C. . . . .	1954	Royal Canadian Mounted Police schooner, first vessel to navigate the northwest passage from west to east (1940-42); exhibited at the Vancouver Maritime Museum.
Fort Rodd Hill . . . . .	Esquimalt, B.C. . . . .	1962	Extensive nineteenth century stone and concrete coastal fortifications.
Dawson City . . . . .	Dawson, Y.T. . . . .	1969	Centre of the Klondike Gold Rush, includes S.S. Keno and Palace Grand Theatre.

<sup>1</sup> Acquired by the Federal Government from the Niagara Parks Commission in 1969.

Evidence of the increasing attraction of Canada's national parks and national historic parks and sites is the growing numbers of visitors as shown in Table 12.

<sup>1</sup> Sites for which visitor data are available.

**Gatineau Park.**—In addition to the national parks described in Table 10, a 138-sq.-mile recreation area known as Gatineau Park is being developed north of the cities of Ottawa and Hull. Although not designated as a national park, this area is being developed by the Federal Government as part of the National Capital Region and is under the care of the National Capital Commission. It is a wilderness area of great potential, extending northward from Hull for 35 miles. It now has 25 miles of parkway, magnificent lookouts, lakes, fishing streams, beaches, picnic areas, camping sites and walking trails and is already one of the finest recreation areas in Canada, enjoyed by well over 1,750,000 visitors each year. A master plan for its further development is under way.

### Subsection 3.—Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

**Newfoundland.**—Altogether, 3,098 sq. miles of wilderness, reservations and parklands in Newfoundland are administered by provincial government agencies. All but 240 sq. miles of that area are in two wilderness reserves designated as protected habitat for caribou and are administered by the Wildlife Division of the Department of Mines, Agriculture and Resources. The 240 sq. miles of developed and reserved public parkland are under the jurisdiction of the Provincial Parks Service of the Department of Economic Development. Of that area, 198 sq. miles are in 28 undeveloped park reservations and the remaining 42 sq. miles are in 36 provincial parks. Operation of these parks is directed toward the preservation of natural environment and most of them are located in wilderness areas, developed only for picnicking and camping. Regulations prohibit hunting and logging but sport fishing is permitted. Use of the parks by campers continues to increase each year. In 1970 it amounted to a total of 148,132 camp and trailer days, almost 22 p.c. more than in 1969.

**Prince Edward Island.**—Twenty areas have been developed as provincial parks including Strathgartney Park, a 40-acre tract of land on the Trans-Canada Highway between Charlottetown and Borden, which is an excellent picnic site and campground with its hardwood groves, fresh spring water and beautiful view over the West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park and Golf Course, comprising 296 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 22 acres at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 45 acres on the Trout River, is an attractive combination of land, trees and water and is also of interest as a historic shipbuilding centre; Cabot Park at Malpeque, named in honour of the famous explorer, John Cabot, is a 54-acre area with beautiful sandy beaches and an interesting museum; and several small parks have been developed or are under development. A fee of \$3.50 is charged for serviced tent and trailer sites and of \$2.50 for unserviced sites. The parks are maintained by the Department of Tourist Development.

**Nova Scotia.**—A provincial park system is under development in Nova Scotia by the Department of Lands and Forests, which will include a network of picnic parks accessible from major highways for day use and a series of camping parks for overnight visitors. The

need is also recognized for acquisition and development of provincial beaches, particularly along the warm waters of Northumberland Strait. The major camping parks in use at the end of 1970 included Whycocomagh Park overlooking Bras d'Or Lake in Cape Breton; Laurie and Porter's Lake Parks near Halifax; Caribou and Tatamagouche Parks on Northumberland Strait; Wentworth Park in the Wentworth Valley; Smiley Park in the Annapolis Valley; Islands Park on the south shore; Mira River Park between Sydney and Louisbourg; Battery Park at St. Peters canal; Valleyview Park overlooking the Annapolis Valley; Ellenwood Lake Park in the southwest near Yarmouth; Five Islands Park overlooking Minas Basin; Saltsprings Park in Pictou County; and Boylston Park between Boylston and Guysborough. Several other camping parks and picnic parks were in process of development.

The policy of the Department is to provide good basic facilities, leaving scope for private enterprise to offer more sophisticated items such as showers, etc. Use of the picnic parks is free but there is a nightly charge of \$1.50 in camping parks. Concessions are not permitted under present policy.

**New Brunswick.**—The New Brunswick provincial park system, which is administered by the Department of Tourism, includes 22 recreational parks ranging in size from 25 to 1,400 acres, 24 picnicground parks, 11 campground parks, six beach parks, a marine park and a resource park. Most of the park sites are located in rural areas, fairly evenly distributed throughout the province, and are adjacent to or easily accessible from main trunk roads. All parks contain tables, some form of toilet facility and a potable water supply but more elaborate facilities are available in the larger parks. A vehicle fee is charged at some parks and a daily camping fee of \$2 to \$2.50 is in effect at 25 of the larger parks. The Department also maintains a wildlife park at Woolastook near Fredericton where various species of wildlife to be found in the province are displayed.

In 1970, more than 3,500,000 persons visited the provincial parks, 170,000 of them campers; 75 p.c. of the campers using park sites came from outside the province.

A five-year federal-provincial (ARDA) program of expansion and improvement of park and campground facilities in the province was recently completed; this included the development of approximately 1,000 tent and trailer sites, accommodation for day-use of beaches, forest and wildlife recreation areas, scenic lookouts, etc., land purchase, and provision of special facilities where warranted by intensity of use, such as boats, ramps, docks, canteens and playgrounds. A new program is being negotiated.

**Quebec.**—The Province of Quebec has set aside an exceedingly large proportion of its territory as parks for the purpose of conserving the natural resources and providing areas for open-air recreation. Its major parks extend over almost 75,000 sq. miles, which amounts to about 13 p.c. of the area of the province and, excluding James Bay Park, covers nearly 20 p.c. of the forest area south of the 52nd parallel.

In all, there are 30 major parks, the oldest of which are Mont Tremblant Park dating back to 1894 and Laurentide Park to 1895. Mont Tremblant Park, an area of 990 sq. miles, is located 80 miles north of Montreal and is situated within one of the most extensively used summer and winter recreational areas of the province. The first concern in the establishment of Laurentide Park, an area of 4,059 sq. miles lying 30 miles north of Quebec City, was the conservation of the caribou, then in danger of dying out. Unfortunately, the protection afforded was not sufficient to preserve these animals but they have recently been re-introduced into the park area with more success. Gaspé Park, an area of 498 sq. miles, was established in 1937, also for the purpose of protecting the caribou and there a herd can now be found on Mont Albert. La Vérendrye Park, a 5,257-sq.-mile wilderness area 140 miles northwest of Montreal, was created in 1939 as the Mont Laurier-Senneterre Highway Fish and Game Reserve and was renamed in 1950 to honour the illustrious Canadian explorer, Pierre Gaultier de Varennes, Sieur de La Vérendrye, who discovered the Rocky Mountains. Mont Orford Park, a smaller area of 15 sq. miles west of Sherbrooke in the Eastern Townships, was established in 1938 and has become a highly specialized regional recreation area, devoted principally to camping.

Since then, more than 20 parks have been created:—

Labrieville (1964).....	165		

Perhaps the most popular activity in Quebec parks is fishing and the three new parks that came into use in 1971—Mastigouche, Joliette and Labelle—were established for the purpose of giving more anglers access to many lakes and rivers in proximity to large urban centres. Papineau Park, which was established in 1965, was also made accessible to a larger public. To assist in the greater use of these facilities, a system has been set up whereby anglers may make reservations to fish for one day only by telephoning the park reception centre at least 48 hours in advance. Reservations are accepted in the order in which they are made, without discrimination. The Quebec Government years ago set aside a number of rivers as fishing reserves for public use, particularly for salmon fishing. They include the St. Jean, Petite Cascapédia, Matapédia, Ste. Anne, Cap Chat and Matane Rivers in the Gaspé area, the Moisie and Laval Rivers along the north shore of the St. Lawrence, and the Petit Saguenay, a tributary of the Saguenay River.

Hunting is generally prohibited in the parks but a controlled moose hunt, authorized as a wildlife-management technique, has been permitted for Quebec residents only in Laurentide, La Vérendrye, Matane, Portneuf, St. Maurice and Upper St. Maurice Valley Parks. Hunting is also permitted in Rimouski Park under certain conditions.

The Parks Branch of the Department of Tourism, Fish and Game has recently added to the number of campsites in the province to meet the growing popularity of that form of recreation, supplementing the network of privately operated sites. In the eastern portion of the province, provincial campsites are located at Carleton, Port Daniel, Moisie, Mont St. Pierre, Percé and Trois Pistoles. Camping areas closer to Quebec City include St. Alexandre (Kamouraska), Montmagny, St. Jean (Île d'Orléans), Stoneham, Villeneuve, Vincennes (Beaumont), St. Camille (Bellechasse) and St. Joseph de Beauce. Those in the general area of Montreal are Mont Orford, des Voltigeurs (Drummondville), Waterloo, Côte Ste. Catherine, Paul Sauvé (Oka), Dollard des Ormeaux, Pointe des Cascades, Coteau Landing and Ste. Véronique.

In a number of parks, trails have been marked and facilities set up for the use of snowmobile enthusiasts, enabling them to enjoy in safety the natural beauty of the surroundings. Such facilities are provided in the winter season at Rimouski, Laurentide, Chibougamau, St. Maurice, Mont Tremblant and Dollard des Ormeaux Parks and at Paul Sauvé Park at Oka and Darwin Falls at Rawdon.

Another winter sport that is gaining in popularity is cross-country skiing. This is less expensive than down-hill skiing and has become a favourite sport for families and groups of friends. Ski trails have been laid out in a few parks, particularly in the Mercier Camp area of Laurentide Park where a heated relay station is available for skiers and for snowshoers, who have also become quite numerous in recent years. The cross-country trails are well marked and are of various lengths and degrees of difficulty so as to suit the skills of beginners and experts alike.

**Ontario.**—In 1970 there were 108 provincial parks available for public use in Ontario and several new parks were in process of development; 78 other areas, comprising 1,937 sq. miles, were held in reserve for future development. The total area of the Ontario provincial park system was about 16,000 sq. miles. The parklands are administered by the Parks and Recreation Areas Branch of the Department of Lands and Forests.

The seven largest parks—Polar Bear, Algonquin, Quetico, Lake Superior, Missinaibi, Killarney and Sibley—together have an area of about 12,725 sq. miles. Polar Bear Park is the largest in the system, occupying 7,000 sq. miles of Hudson Bay Lowland bordering Hudson and James Bays containing boreal forest, tundra and arctic flora and fauna. Algonquin Park is a beautiful area 2,910 sq. miles in extent, 180 miles north of Toronto and 105 miles west of Ottawa; it has 14 picnic and camping areas which are accessible by car from Highway 60 and offers particularly fine canoeing opportunities in its interior. Killarney Park is accessible by Highway 637 from Highway 69 south of Sudbury. Quetico Park, covering 1,750 sq. miles, is accessible by Highway 11 at the Dawson Trail Campground on French Lake and also by water by way of Basswood Lake in the south. Highway 17 north from Sault Ste. Marie gives access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Thunder Bay. Missinaibi Park, 176 sq. miles in extent, surrounds Missinaibi Lake, 55 miles north of Chapleau. The lake is renowned for walleye fishing and is the site of an important Hudson Bay trading post.

Under the Wilderness Areas Act of 1959, 40 areas have been established, widely distributed across the province. They vary in size, character and significance but all were established as being important for their historic, scientific, aesthetic or cultural values. The largest is a 938-sq.-mile block covering the Pukaskwa area on the north shore of Lake Superior. Most other wilderness areas are one square mile or less in size.

*A ski lift in the popular Collingwood area of Ontario gives summer visitors a magnificent view of Georgian Bay.*

In 1967 a policy of park classification and parkland zoning was established to achieve a balanced park system and to provide a framework for positive and effective development and management. Five park classes were established—primitive, natural environment or heritage, wild river, nature reserve, and recreation. Comparable zones within parks were also established—primitive, natural, historic, multiple use, and recreation. Some areas once protected under the Wilderness Areas Act for their scientific values are being changed in law to be protected as nature reserves under the Provincial Parks Act. There are now six nature reserves, four of which were previously under the Wilderness Areas Act. All nature reserves contain natural features and phenomena that are either unique or typical of the primitive or contemporary landscapes which together form the ecological mosaic of Ontario. By the end of 1970, there were five wild river parks in existence, three of which, all located in the central section of northern Ontario, were established during the year—Mississagi, Chapleau-Nemegosenda and Lady Evelyn.

Ontario has made another advance in meeting the rising pressures for recreational space by applying the concept of the recreational reserve. It has created the North Georgian Bay Recreational Reserve which covers 4,500 sq. miles of interesting country lying generally between Algoma and Parry Sound on the north shore of Georgian Bay and includes the channel between Manitoulin Island and the mainland, the 30,000 Islands, the famous route of the voyageurs by way of the French River, the remaining shoreline of Lake Nipissing and the La Cloche Mountains. The Reserve is not a provincial park nor is it a Wilderness Area but an area following a normal course of development which is already used extensively for recreation. The plan is, by guiding the evolution of the area, to realize its full potential as a recreational paradise serving all types of needs and co-existing with a landscape of normal activity.

Ontario's vast lakeland areas make this province a vacation paradise and the number of park visitors increases year by year. In 1970, 12,172,254 persons attended, of whom 1,531,528 were campers making use of the 18,272 campsites provided for them. The charge for vehicle entry in 1970 was \$1 a day or \$10 a year, and the camping charge was \$2.50 a night which included vehicle entry. Picnic tables, fireplaces, fuelwood, tested drinking water and washrooms are provided at supervised tent and trailer campgrounds and many parks have trailer sanitation stations. Interpretative and naturalist programs are being expanded continually and such services as museums, outdoor exhibits, conducted trips, illustrated talks and labelled nature trails are available in many parks.

**Manitoba.**—The provincial parks system of Manitoba, administered by the Parks Branch of the Department of Tourism, Recreation and Cultural Affairs, consists of four major classifications of outdoor recreation development: provincial parks, which are large area parks with a variety of natural attractions suited to outdoor activities; recreation areas, the natural attractions of which are modified to accommodate recreation activities of an intensive nature; waysides, which are located on most highways to enhance travel routes and provide attractive rest stops; and heritage areas, which are areas of outstanding scenic beauty or have natural, physical or historic features of special local interest.

There are ten provincial parks in Manitoba, six of which are well established. Birds Hill Provincial Park comprises 8,400 acres and an 80-acre man-made lake within easy reach of the Manitoba capital. In south-central Manitoba, Spruce Woods Provincial Park is set in an area thriving with wildlife, woods and wildflowers along the valley of the Assiniboine River, and also features lookouts over the shifting sand dunes of the Bald Head Hills, the province's only truly desert area. Near the western boundary, Assessippi Provincial Park is under development on the southern end of a 45-mile-long man-made lake behind the Shellmouth Dam on the Assiniboine. The Shellmouth reservoir will provide for development of water-based facilities on a large scale for western Manitoba residents and visitors.

Hecla Island Provincial Park is the most recent addition to the parks system. This park includes a group of islands of which Hecla is the largest and adds over 7,300 acres of

land and 140,000 acres of water area in the southern section of Lake Winnipeg. Grindstone Point, adjacent to Hecla Island Provincial Park, is also being developed as a recreation area in conjunction with the park. Hecla Island is connected by causeway to the mainland and Highway 8. Park developments will offer resort facilities for water sports, hiking, snowmobiling, hunting and fishing and will include a marina and an interpretative centre. Hecla village will be developed as a historic Icelandic fishing site.

Manitoba provincial parks have a total area of about 3,190 sq. miles. In addition, there are 41 recreation areas ranging in size from four to 2,364 acres, and more than 90 roadside facilities. The park system contains 51 campgrounds. Hunting and fishing lodges are common and accommodation in some of the parks ranges from modern resorts and motels to hotels and cabins. Golf, tennis, boating, swimming, fishing, riding and hiking facilities are available, as well as children's playgrounds. A major ski area and a system of snowmobile trails provide for growing participation in winter outdoor activities. Over 100 commercial concessions operate within the parks system, offering a variety of services ranging from restaurants to riding stables and marinas.

Rehabilitation and expansion of existing recreation areas are continuing in an effort to provide new camping and improved day-use facilities. Development is continuing, too, in the heritage-area program to preserve and interpret sites, large and small, illustrating the natural and human history of the province. Surveys have been conducted to study potentials along the shorelines of Lake Winnipeg and Lake Manitoba and provide guidance for future development of recreational facilities in Manitoba's interlake area.

Popularity of the Manitoba provincial parks and recreation areas is indicated by impressive annual increases in the number of park visitors. In the three years ended Mar. 31, 1971, the numbers were estimated at 1,776,000, 2,420,000 and 2,650,000, respectively. An estimated 83,600 families and groups in tents, trailers and truck campers utilized campground facilities across the province in the 1970-71 fiscal year, an increase of nearly 14,000 over the previous year. The admission fee to Manitoba's provincial parks is \$1 a day or \$5 for the season.

**Saskatchewan.**—Saskatchewan's 15 provincial parks, comprising 1,821 sq. miles of recreation land, range from forested parklands in the midst of the sprawling prairie to valley parks between the soft hillsides of the legendary Qu'Appelle and rugged northland settings. Each park offers camping, picnicking, boating and swimming facilities and a variety of recreational activities. Eleven of the parks operate a supervised recreation program of regularly scheduled activities for all ages—arts and crafts, hikes along park nature trails, social functions and numerous team sports. Moose Mountain boasts a dignified split-fieldstone chalet and other modern cabin accommodation. Cabin facilities are also found at Cypress Hills, Duck Mountain and Greenwater Lake Parks. Golf courses are found at Cypress Hills, Moose Mountain and Duck Mountain Parks. In Cypress Hills Park, with its unique forest cover of stately lodgepole pine and white spruce, are found elk, antelope, deer, beaver, sharp-tailed grouse and quiet trout-stocked streams. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk and bear appear variously and deer and beaver are common to all, as are several varieties of grouse and many species of waterfowl and smaller land birds. Pike, pickerel and perch abound in almost all park lakes and brook and rainbow trout are ardently sought in northern waters. Canoe routes and commercially operated fishing and hunting camps are found in the province's three wilderness parks—La Ronge, Nipawin and Meadow Lake. Hundreds of roadside camp and picnic grounds are in operation. Four official campgrounds and several other camping areas dot the province's 406-mile stretch of Trans-Canada Highway. Here, campers and picnickers relax in picturesque settings, contrasting the flat prairie highway. Saskatchewan also operates 74 regional parks which, although designed primarily with local patrons in mind, attract large numbers of tourists.

Marked sites of historic interest number 143 and include the Wood Mountain NWMP Post, Last Mountain House, Touchwood Hills, Cannington Manor, Steele Narrows, Fort Carlton and Cumberland House Historic Parks.

**Alberta.**—The Province of Alberta has 51 provincial parks containing 218 sq. miles; 46, with a total area of approximately 208 sq. miles, are in use and continuing development. Cypress Hills Provincial Park with an area of 78 sq. miles is the largest and is situated in the southeast portion of the province. Other parks are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Knife, Bow Valley, Bragg Creek, Calling Lake, Chain Lakes, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Dry Island Buffalo Jump, Entrance, Garner Lake, Gooseberry Lake, Gregoire Lake, Hasse Lake, Hommy, Jarvis Bay, Kinbrook Island, Lac Cardinal, Lesser Slave Lake, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O, Miquelon, Moonshine, Moose Lake, O'Brien, Park Lake, Pembina River, Pigeon Lake, Police Outpost, Red Lodge, Rochon Sands, Saskatoon Island, Sir Winston Churchill, Taber, Thunder Lake, The Vermilion, Tillebrook, Traus-Canada Campsite, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford, Writing-On-Stone, Youngs Point. These parks, which are generally provided with picnic, camping and playground facilities, are maintained by the Department of Lands and Forests, Provincial Parks Division, primarily for the recreation and enjoyment of residents and visitors. There is a park within easy reach of almost every town. The most northerly park is Gregoire Lake, about 20 miles south of Fort McMurray and the southernmost park is Police Outpost which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by 5,187,152 tourists and vacationists between Apr. 1, 1970 and Mar. 31, 1971.

In addition to the recreational parks, 26 sites have been established to mark and preserve locations of historical interest. They are Athabasca Landing, Buckingham House, Bugnet Plantation, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Grizzly Bear Telegraph Station, Hay Lakes Telegraph Station, Head-Smashed-In Buffalo Jump, Massacre Butte, Ribstones, Rocky Mountain House Fort, Standoff, Stephansson, Twelve Foot Davis, Shaw Woolen Mill, Rev. George McDougall's Death Site, McLeod Fort, Indian Stone Pile, St. Joseph Industrial School and Old Women's Buffalo Jump.

Provided also for Albertans are the Willmore Wilderness Provincial Park which adjoins Jasper National Park in the north and extends along the British Columbia border, and two wilderness areas established under the Forest Reserves Act in 1961. Willmore Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles and White Goat Wilderness 439 sq. miles. The Ghost River Wilderness area of 59 sq. miles was established under the Provincial Parks Act in 1967. The wilderness areas have been set aside to preserve as far as possible the natural scene and are neither subject to any development nor provided with roads. The Wilderness areas are complemented by five natural areas established during 1968-70 in representative zones of the province—Kootenay Plains Natural Area in the mountain region (13 sq. miles), Foothills Natural Area (160 acres), Parkland Natural Area (159.2 acres), Brown-Lowrey Natural Area (640 acres) and Red Rock Coulee Natural Area (801 acres).

**British Columbia.**—There are 285 (175 developed) provincial parks in British Columbia, having a total area of about 10,134 sq. miles. These parks are classified as A, B and C. Class A parks are intended to preserve outstanding natural, scenic and historic features of the province for public recreation; they have a high degree of legislative protection against exploitation and alienation. Class B parks are also primarily for the protection of natural attractions but other resource use may be permitted if it does not unduly impair recreational values. Class C parks are intended primarily for the use of local residents and are usually managed by local park boards. Nature Conservancy Areas in any park are fully protected from resource development and are dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park and outstanding scenic and mountain reserves such as Garibaldi, Mount Robson, Manning and Bowron Lake Parks. The formal gardens of Peace Arch Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with

*Montague Harbour is one of British Columbia's many marine parks developed for the use of water-borne vacationers.*

tourists; the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored and became the first Provincial Historic Park; Fort Steele in the East Kootenay area is also being restored to preserve another of British Columbia's pioneer settlements. Twelve marine parks with mooring facilities and campgrounds have been developed on mainland inlets and coastal islands for the benefit of water-borne vacationers.

The popularity of British Columbia's parks, with their integrated campgrounds and picnic areas, is attested by the fact that about 7,541,000 park visits were recorded during 1970; about 25 p.c. of the visitors were campers and the remainder day visitors. Records show that Mount Seymour, Cultus Lake and Golden Ears Parks were the most widely used.

#### **Subsection 4.—Ottawa, Canada's National Capital\***

Canada's Capital lies in a magnificent natural setting, with its hub on the limestone bluff on the south shore of the Ottawa River below the Chaudière Falls. The original inhabitants in this area were the Algonquin Indians, who were driven out by the fierce Iroquois by the middle of the seventeenth century. Champlain explored the Ottawa in 1613 and called it the "la grande rivière des Algomequins", Early English traders called it the Grand River. "Ottawa" is the anglicized form of Outaouac or Outaouais, the name of the Indian tribe from Lake Huron which traded with the French in the seventeenth century. They carried their furs by this river. Explorers, fur-traders, missionaries, and, during the nineteenth century, lumbermen and settlers travelled up and down the Ottawa River.

\* Revised by the Information Services, National Capital Commission, Ottawa.

The first settlement in this region was founded by Philemon Wright, from Woburn, Massachusetts. Early in 1800 he led a small group of farmers and established a settlement in what is now Hull. He also brought in tradesmen and soon had a small self-sufficient community. Wright started the great Ottawa Valley timber trade by taking a raft to Quebec City in 1806, fortuitously meeting England's need for an alternative source of timber when Napoléon had closed the Baltic timber trade.

Settlement on the south shore of the river commenced in earnest about a generation later. The War of 1812 drew attention to the vulnerability of the line of communications along the St. Lawrence River linking Quebec City with the settlements in Upper Canada. A secure alternative route was needed. After many delays and studies, a new route to Kingston via the Ottawa River and Rideau and Cataraqui river systems was approved. Finally, in 1826, Lieutenant-Colonel John By of the Royal Engineers was sent to the Chaudière area to build a canal from that point to Kingston. By employed two companies of Royal Sappers and Miners and a labour force, mainly Irish, of several thousand men to construct the canal. In 1823, the Earl of Dalhousie, Governor-in-Chief of British North America, had secured commanding ground for the Town. In 1827, By laid out two settlements, Upper Town and Lower Town, adjacent to this Crown land, at that time called Barrack Hill. The canal was completed in 1832 and Bytown began to grow and prosper. Stores, factories, banks, churches and schools appeared. Steamboats plied the river and canal. A newspaper, the *Bytown Gazette*, was started in 1836.

Bytown was now the inland centre of the squared timber trade and by 1850 could boast of some fine stone buildings, among them the home of Thomas MacKay which today forms the central part of the residence of the Governor General of Canada. A change then occurred in the timber industry; the British system of preferential import duties on squared white and red pine logs was abandoned and trade began to decline. However, by this time the accessible forest stands of the eastern United States were depleted and sawn lumber was needed to house a growing population. Also, the American railway and canal network had extended to the Canadian border, making transportation easy. Encouraged by these favourable conditions American industrialists came to Bytown and established large saw-mills by the Chaudière Falls. Soon the islands about the falls and the flats on both shores were covered with lumber piles and loaded barges were on their way to the American market. The lumber industry began its rise to dominating importance.

At the beginning of 1855, Bytown became a city and took the name Ottawa. Two years later it received a great honour and assumed a great responsibility. The United Province of Canada, since its formation in 1841, had shuttled its capital between Kingston, Toronto, Montreal and Quebec and was now trying to agree on a permanent site. At the end of 1857, Queen Victoria settled the dispute by choosing Ottawa. Government buildings for the new capital were designed and contracts were let in 1859 for their construction. However, the task was hard and the cost much greater than expected and it was not until 1866 that the government of the Province of Canada actually moved to Ottawa. The next year the first Parliament of the new Dominion of Canada met in an incomplete Parliament Building, situated on the former Barrack Hill.

The nation enjoyed a brief prosperity during most of the next decade. Ottawa grew and the government expanded as the Dominion extended its authority over more and more of British North America. In 1871 the city had a population of about 22,000. Many fine homes and stores in stone and brick were built. The Departmental Buildings, flanking the Parliament Building on the Hill, were enlarged. An old wooden City Hall near the Canal was replaced in 1876 by a fine stone building and a large post office was erected at the city's centre. By the end of the nineteenth century, Ottawa was a flourishing industrial centre with a population of 59,000. It remained the hub of the lumber industry of Eastern Canada, had the largest paper mills in the country and the leading match factory in the world. However, little effort had been made to preserve or enhance its natural beauty until the Ottawa Improvement Commission was formed in 1899 and the Driveway along the Rideau Canal was begun. Even so, progress was slow in this direction, but in the years up

to the beginning of the First World War the city centre began to take on a new face. Many new government buildings were built—the Dominion Observatory and the Geodetic Building at the Experimental Farm, the Archives Building, the Victoria Memorial Museum, the Royal Canadian Mint and the Connaught Building. In 1912, the Grand Trunk Railway completed construction of the Union Station and the Chateau Laurier. During this period several studies were made and plans recommended for the improvement of the national capital, but these were deferred because of the War and for other reasons. Fire destroyed the Parliament Building in 1916, leaving standing only the Library now forming part of the magnificent building of neo-Gothic architecture which replaced it. The beautification of the capital was continued by the Ottawa Improvement Commission until 1927, when it was replaced by the Federal District Commission. However, the first concrete step in the redevelopment of the National Capital took place in 1951 with the tabling of a comprehensive master plan for the National Capital Region. The plan, referred to as the "Gréber Plan", brought a solution to the many problems impeding the growth of the region and the National Capital Commission was formed in 1959 to carry out the recommendations.

Ottawa today, with its population of close to 300,000, together with the city of Hull on the north side of the Ottawa River with its population of about 63,000, comprises the core of the National Capital Region, an area of about 1,800 square miles located in the Provinces of Ontario and Quebec. In lineal distance, the nearest extremity of the Region to Parliament Hill is 18 miles and the farthest is 35 miles. Within that area there are 57 municipalities and a total population of about 600,000. Industrial development in the Region is limited, a good proportion of the work force being employed by the Federal Government or associated with government functions.

Although the terms of reference of the National Capital Commission are "to prepare plans for and assist in the development, conservation and improvement of the National Capital Region in order that the nature and character of the seat of the Government of Canada may be in accordance with its national significance", it should be noted that the Commission does not have jurisdictional authority over any of the municipal or regional authorities or the two provincial governments concerned. Most matters affecting the municipalities—such as planning, zoning, land use, building density, public transit, parking and construction of streets, arterial roads and highways—are within their sole jurisdiction, subject only to provincial government approval, so that the National Capital Commission in its development efforts depends essentially upon the co-operation of each municipality and provincial government. As a result of this co-operation, the cities of Ottawa and Hull and their surrounding areas have, as a whole, become an efficient and aesthetically satisfying place in which to carry on the nation's business and a fitting symbol of Canada's cultural and linguistic values.

The recreational amenities of the Region, and especially those in Ottawa and Hull, have been developed for people to use and enjoy. To the advantages of the well-known scenic driveways and large parks and playgrounds have recently been added the pleasures of a four-mile ice skating rink along the Rideau Canal through the heart of Ottawa, of large garden allotments where families may hoe and gossip in open air and sun, and of fifty miles of looping bicycle paths winding past waterways and through pleasant wooded areas. Public concerts in the parks, walking tours, attractive pedestrian malls and museums are there for the participation of all Canadians and their visitors and the Region has become a centre of national significance in which all may have a sense of pride and possession.

the Ottawa River parkway.

Photos by  
Malak

Ottawa, where most of the Federal Government's business is conducted, has become a capital of which all the nation can be justly proud. Through the years, its planners and builders have taken full advantage of its magnificent setting and have made it a very pleasant place in which to live—winter and summer, spring and fall.

### PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning over one hundred years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

Although the new nation that came into being on July 1, 1867 was a federation comprised of four provinces (namely, Ontario, Quebec, New Brunswick and Nova Scotia) Sect.

\* Except where otherwise indicated, the data in this Chapter have been brought up to the date of June 30, 1971. Any important changes that may occur between that date and the date of going to press of the volume will be carried in Appendix I.

146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,\* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), Statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be *ultra vires* or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two

\* See *A Consolidation of The British North America Acts 1867 to 1965*, consolidated by Elmer A. Driedger as of Jan. 1, 1967. Information Canada, Ottawa. 75 cents (Catalogue No. YX1-167).

hundred years ago and since then have been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see p. 87) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see p. 94 and p. 112).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Security of these rights was confirmed by the passage of a Canadian Bill of Rights—An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c.44), assented to Aug. 10, 1960. (See also Chapter IX, Sect. 1 on Canadian Criminal Law and Procedure.)

As mentioned above, the *right to use* either the English or the French language in the House of Commons, the Senate or the federal courts is constitutionally guaranteed by Sect. 133 of the British North America Act. The *use* of the English and French languages in the administration of the Government of Canada is dealt with in the Official Languages Act (RSC 1970, c. 0-2). That Act provides that government notices to the public, certain orders and regulations, and final decisions of federal courts are to be made or issued in both languages and that, in the National Capital Region and in federal bilingual districts, government services are to be available in both languages. The Commissioner of Official Languages for Canada is responsible for ensuring that the Act is complied with.

**Amendment of the Constitution.**—No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. An outline of the constitutional

background to the problem, an annotated list of the fourteen occasions since 1867 when amendments to the British North America Act were made by the United Kingdom Parliament, a concise review of the prolonged search for a satisfactory amending procedure in Canada—the subject of repeated consideration in the Parliament of Canada and in a series of formal federal-provincial conferences and meetings in the years 1927, 1935-36, 1950, 1960-61 and 1964—and, more specifically, the text of a draft Bill “to provide for the amendment in Canada of the Constitution of Canada” (accompanied by explanatory notes relating thereto) which embodies the amending procedure or formula unanimously recommended by the Conference of Attorneys-General and unanimously accepted by the Conference of the Prime Minister and the Premiers (October 1964) are all made available in an official publication entitled *The Amendment of the Constitution of Canada*, authorized by the Minister of Justice, February 1965.\* However, one of the provinces subsequently withdrew its approval of the formula and, as a result, it was never adopted.

Constitutional discussions were renewed in earnest in February 1968. A committee of officials was established to aid the conference in its study of various constitutional questions. Each of the provincial governments with one exception and the Federal Government submitted a set of propositions which outlined their proposals for a new constitution. The Federal Government made its position public in two publications—*Federalism for the Future*,† which outlines in general terms the position of the Federal Government, and *The Constitution and the People of Canada*,‡ which explains in detail the propositions put forward by the Federal Government.

Between February 1968 and June 1971, eight federal-provincial conferences were held on the constitution. The discussions culminated in the drafting of the Canadian Constitutional Charter 1971, which set out specific constitutional reforms including a revised amendment procedure. The Charter was considered at the Constitutional Conference in Victoria, B.C., in June 1971 but as yet (September 1971) has not been accepted by all governments.

**Treaty-Making Powers.**§—The Federal Government has exclusive responsibility for the conduct of external affairs as a matter of national policy affecting all Canadians. The policy of the Federal Government in discharging this responsibility is to seek to promote the interest of the entire country and of all Canadians of the various provinces within the over-all framework of the national policy.

In respect of matters of specific concern to the provinces of Canada, it is the policy of the Canadian Government, in a spirit of co-operative federalism, to do its utmost to assist the provinces in achieving the particular aspirations and goals that they wish to attain. The attitude of the Federal Government in this respect was illustrated by the “entente” signed by representatives of Quebec and France in the field of education in February 1965. The Quebec and federal authorities co-operated actively in a procedure that enabled the Province of Quebec, within the framework of the Constitution and the national policy, to participate in international arrangements in a field of particular interest to that province.

Thus, under existing procedures, the position is that, once it is determined that what a province wishes to achieve through agreements in the field of education or in other fields of provincial jurisdiction falls within the framework of Canadian foreign policy, the provinces may discuss detailed arrangements directly with the competent authorities of the country concerned. When a formal international agreement is to be concluded, however, the federal powers relating to the signature of treaties and the conduct of over-all foreign policy must necessarily come into operation.

§ Extracted from “The Provinces and Treaty-Making Powers”, Appendix to *Votes and Proceedings of the House of Commons of Canada*, No. 8. Apr. 26, 1965.

The approach of the Canadian Government to the question of Canadian representation in international organizations of a social, cultural or humanitarian character reflects the same constructive spirit. It recognizes the desirability of ensuring that the Canadian representation in such organizations and conferences reflects in a fair and balanced way provincial and other interests in these subjects.

<b>Canada .....</b>			<b>3,851,809</b>	

<sup>1</sup> The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

<sup>2</sup> Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

<sup>3</sup> Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

<sup>4</sup> Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

<sup>5</sup> By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3, and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

<sup>6</sup> By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

<sup>7</sup> The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and, by the Yukon Territory Act (SC 1898, c. 6), was declared to be a separate Territory.

## PART II.—MACHINERY OF GOVERNMENT

### Section 1.—Federal Government\*

In any political system there are processes whereby people express their demands to the government; whereby priorities are established among those demands and policies formulated for their implementation; and, finally, whereby the policies are implemented. The institutions, both governmental and non-governmental, through which these processes are carried on vary from country to country and tend to evolve over time, so that in any given country the roles of the institutions in such processes also change over time. This Section describes the institutions of the Government of Canada and their current roles in the fundamental processes of the Canadian political system.

In most countries, the legal framework within which political processes take place is provided through a constitution. The written Constitution of Canada is embodied in the British North America Acts (pp. 75-78). The first of these Acts, passed by the British Parliament in 1867, not only established the institutions through which legislative, executive and judicial powers are exercised in Canada but also established a federal form of government. A central government—the Federal Government—has legislative jurisdiction primarily over matters of national concern and over those matters not otherwise assigned to the provinces. The ten provincial governments are assigned specific areas of legislative jurisdiction, including municipal institutions.

In Canada, there is a fusion of the executive and legislative powers as in Great Britain, but unlike the United States system of separation of such powers. The formal executive power in Canada is vested in The Queen, whose authority is delegated to the Governor General, her representative. The legislative power is vested in the Parliament of Canada which consists of The Queen, an appointive "Upper House" called the Senate and a "Lower House" called the House of Commons, elected by universal adult suffrage. The independence of the judiciary is safeguarded through the constitutional provision that superior court judges are appointed by the Governor in Council and that they hold office during good behaviour and are removable only by the Governor General on address of the Senate and the House of Commons. In other words, judges cannot be removed unless Parliament, the Cabinet and the Governor General agree.

In the Canadian system of government, where the executive is part of Parliament, democratic principles could not be adhered to without the constitutional convention that the Government is responsible to the House of Commons. When the Government loses the confidence of the House of Commons, it must resign or the Prime Minister must request the Governor General to dissolve Parliament and call a general election. Although there are conventions that help in deciding when the Government has lost the confidence of the House, all doubt is removed when the Government is defeated on a motion on which it had explicitly staked its life or when a motion of non-confidence in the Government is passed. If the Government resigns, the Governor General can call on the Leader of the Opposition (who is usually the leader of the political party that has the second largest number of seats in the House of Commons) to form a new Government. If a Government that has lost the confidence of the House of Commons is granted a dissolution is defeated in the ensuing general election and if no clear majority is elected, the Government has two choices—it can remain in office and seek a vote of confidence of the House of Commons when it meets or it can resign at once. If it resigns, the Governor General will normally ask the leader of another party, usually the one that has won the most seats, to form a new Government. The primary responsibility of the Governor General in either circumstance is to provide the nation with a government capable of carrying on with the support of the House of Commons.

The Prime Minister and his Cabinet, who with one or two exceptions are members of the House of Commons, are, formally speaking, the Queen's advisers. In fact, there are

\* Approved by the Privy Council Office.

virtually no significant actions that can be taken by The Queen, or her representative in Canada, the Governor General, without the advice of the Cabinet. The Prime Minister and his Cabinet determine executive policies and are responsible for them to the House of Commons. The Queen and her representative, the Governor General, have the traditional rights to be consulted, to encourage and to warn the Government.

The demands of Canadian citizens are directed primarily to Members of Parliament, directly to Cabinet Ministers or indirectly to Cabinet Ministers through the Public Service. These demands may originate from individuals, political parties or pressure groups. Alternatively, Members of Parliament, Cabinet Ministers and public servants may take the initiative in suggesting the adoption of policies and programs in the public interest. Although the roles performed by Parliament, the Public Service and the Cabinet cannot be defined with absolute precision, the following stylized description deals with the most obvious and primary roles of each in the Canadian political system.

The determination of public policy rests with the Cabinet but begins generally with the formulation of policy by the individual Ministers. This means, usually, that the public servants under the direction of the Ministers in fact formulate policy proposals which are then submitted, if he agrees, by the Minister concerned to his colleagues in the Cabinet. The Cabinet chooses among the policies submitted and determines which it wishes to implement. The Cabinet may itself formulate policies but, more often, it simply decides from among the alternatives submitted. The establishment of a Cabinet committee system (see p. 89) that operates on a systematic basis and, more especially, the establishment of the Cabinet Committee on Priorities and Planning represent attempts to enhance the capacity of Cabinet in its primary role of policy determination and priority setting.

In conformity with the concept of the rule of law, all executive acts must be authorized by law, and laws are enacted by Parliament. Executive acts may be sanctioned directly by a statute which specifies how a policy is to be implemented, or indirectly by a statute which authorizes the Governor in Council to undertake specific acts. Much of the activity of the Public Service is authorized through the yearly enactment of Appropriation Acts authorizing the expenditure of public funds for specific purposes. As far as the operations of the Government are concerned, Parliament is concerned primarily with the discussion and authorization of policy submitted for its approval by the Government (Ministers). The approval of these policies is accomplished mainly through the enactment of legislation. In an attempt to enhance the capacity of the House of Commons to perform this role efficiently, the Government introduced numerous changes in the rules of procedure of the House, which were adopted in February 1970, and are included in the Standing Orders of the House of Commons.

The most significant feature of the above processes is that the Government, or Cabinet Ministers, have seats in Parliament and thus share in the exercise of the legislative power. In fact, the majority of legislation enacted by Parliament is submitted by the Government. (The Constitution provides that all financial measures *must* be introduced by the Government.)

It is the role of the judiciary to apply the laws enacted by Parliament. In the Canadian system of government, Parliament is supreme. This means, among other things, that the judiciary must apply the law as Parliament has enacted it and cannot declare laws to be unconstitutional if they are within the legislative jurisdiction of Parliament or of the legislature that enacted them.

The administration of legislation and of the Government's policies is carried out through a Public Service comprising employees organized (1971) in 25 departments of Government and 67 special boards, commissions and Crown corporations or other agencies. Legislation and tradition have combined to develop a Public Service that is non-partisan, the tenure of whose employees is not altered when changes in the Government take place. The only direct relationship between public servants and Parliament is when they are called to appear as witnesses before parliamentary committees. On these occasions, public servants do not, by convention, express opinions on public policy but usually appear as experts and

to explain existing policy. The public servants who head agencies such as the Public Service Commission, the Office of the Auditor General, the Office of the Language Commission, the Library of Parliament or the Office of the Chief Electoral Officer, which have a special relationship to Parliament, and who are not subject to direction by the Government on matters of policy, may appear before Parliamentary Committees to explain the policies of their agencies.

The growth in number, variety and complexity of demands placed on the Government requires it not only to adjust its policies in response to these demands but, with increasing frequency, to make significant changes in the organization of the Public Service so that the required policies can be properly implemented. Major reorganization of the Public Service has been authorized by the passage of Government Organization Acts in 1966, 1969 and 1970. The latter are described briefly at p. 139.

### Subsection 1.—The Executive

**The Crown.**—The British North America Act of 1867 (Sect. 9) provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown (that is, the formal executive represented by The Queen), which are substantially the same as those of the Crown in relation to the British Government, are discharged by the Governor General.

**The Queen.**—The Queen seldom personally discharges the functions of the Crown in respect of Canada except on such occasions as the periodic appointment of the Governor General which is done on the recommendation of the Prime Minister of Canada. On the occasion of a Royal visit, The Queen may participate in those ceremonies that are normally carried out in her name by the Governor General, such as the opening and dissolution of Parliament, the assent to Bills passed by the House of Commons and the Senate, and the granting of a general amnesty.

The Queen is not only Queen of Canada but of several other countries in the Commonwealth. Her Majesty’s title for Canada was approved by Parliament and established by a Royal proclamation on May 28, 1953. The title of The Queen, as far as Canada is concerned, now is:—

Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith.

### 1.—Sovereigns of Canada since Confederation, 1867

Name	Year of Birth	Date of Accession
Victoria.....	1819	June 20, 1837
Edward VII.....	1841	Jan. 22, 1901
George V.....	1865	May 6, 1910
Edward VIII.....	1894	Jan. 20, 1936
George VI.....	1895	Dec. 11, 1936
Elizabeth II.....	1926	Feb. 6, 1952

**The Governor General.**—The Governor General is the representative of the Crown in Canada. The present incumbent, His Excellency The Right Honourable Roland Michener, C.C., C.D., is the twentieth Governor General since Confederation and was appointed by Her Majesty Queen Elizabeth II on Mar. 29, 1967, on the recommendation of the Prime Minister of Canada. Constitutionally, The Queen of Canada is the Canadian Head of State but the Governor General fulfils her role in this regard on her behalf. The Letters Patent revised and re-issued under the Great Seal of Canada on Oct. 1, 1947, authorized the Governor General “to exercise on the advice of his Canadian ministers, all Her Majesty’s powers and authorities in respect of Canada”.

One of the most important responsibilities of the Governor General is to ensure that the country always has a Government. If the office of the Prime Minister becomes vacant because of death, resignation or defeat of the Government in the House of Commons (see p. 86), it is the responsibility of the Governor General to see that the office of the Prime Minister is filled and that a new Government is formed.

As the representative of The Queen—one of the three elements of the Canadian Parliament, the others being the Senate and the House of Commons—the Governor General summons, prorogues and dissolves Parliament on the advice of the Prime Minister. He signs Orders in Council, commissions and many other state documents, and gives his assent to Bills that have been passed in both Houses of Parliament and which thereby become Acts of Parliament with the force of law (unless Parliament prescribes specifically otherwise). Like The Queen, he is bound in virtually all cases to carry out these duties in accordance with the advice of his responsible Ministers. Should he not wish to accept the advice of his responsible Ministers, and should they maintain that advice, his only alternative is to replace the existing Government with a new Government. This alternative could be exercised only if, at the same time, the principle of responsible government could be maintained. This means that the Governor General's discretion in choosing another Government is strictly limited to a situation in which a person other than the existing Prime Minister could command the confidence of the House of Commons.

In Canada, as in other constitutional monarchies, there is a clear division between the executive and representational functions of state. The Prime Minister, as the elected political leader of the country, is the chief executive and head of the Government. The Governor General, on the other hand, is not involved in any way in party politics or political affiliation and he is, therefore, in a position to represent Canada as a whole and to speak for Canadians on ceremonial and state occasions. In effect, the Governor General has become an important symbol of the unity of Canada and the continuity of its institutions and national life.

*Canada's Governor General, The Right Honourable Roland Michener, who is also Chief Scout, has the pleasant task of presenting Gallantry Crosses to Boy Scouts who have performed acts of bravery in which their own lives were in danger or for other meritorious conduct.*

The Governor General is Canada's host to visiting Heads of State and other distinguished visitors from abroad. He extends hospitality of many forms to many Canadians and lends his patronage in support of a great variety of activities throughout the country.

The Governor General receives the Letters of Credence of Ambassadors appointed to Canada, receives Commonwealth High Commissioners on appointment and holds investitures for the conferring of honours and awards. He is the Chancellor and Principal Companion of the Order of Canada, created in the Centennial Year as a means of recognizing distinguished public service and outstanding achievement or gallantry.

## 2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
THE VISCOUNT MONCK OF BALLYTRAMMON.....	June 1, 1867	July 1, 1867
THE BARON LISGAR OF LISGAR AND BAILIEBOROUGH.....	Dec. 29, 1868	Feb. 2, 1869
THE EARL OF DUFFERIN.....	May 22, 1872	June 25, 1872
THE MARQUIS OF LORNE.....	Oct. 5, 1878	Nov. 25, 1878
THE MARQUIS OF LANSDOWNE.....	Aug. 18, 1883	Oct. 23, 1883
THE BARON STANLEY OF PRESTON.....	May 1, 1888	June 11, 1888
THE EARL OF ABERDEEN.....	May 22, 1893	Sept. 18, 1893
THE EARL OF MINTO.....	July 30, 1898	Nov. 12, 1898
THE EARL GREY.....	Sept. 26, 1904	Dec. 10, 1904
FIELD MARSHAL H. R. H. THE DUKE OF CONNAUGHT.....	Mar. 21, 1911	Oct. 13, 1911
THE DUKE OF DEVONSHIRE.....	Aug. 19, 1916	Nov. 11, 1916
GENERAL THE BARON BYNG OF VIMY.....	Aug. 2, 1921	Aug. 11, 1921
THE VISCOUNT WILLINGDON OF RATTON.....	Aug. 5, 1926	Oct. 2, 1926
THE EARL OF BESSBOROUGH.....	Feb. 8, 1931	Apr. 4, 1931
THE BARON TWEEDSMUIR OF ELSFIELD.....	Aug. 10, 1935	Nov. 2, 1935
MAJOR GENERAL THE EARL OF ATHLONE.....	Apr. 3, 1940	June 21, 1940
FIELD MARSHAL THE VISCOUNT ALEXANDER OF TUNIS.....	Mar. 21, 1946	Apr. 12, 1946
THE RIGHT HONOURABLE VINCENT MASSEY.....	Jan. 24, 1952	Feb. 28, 1952
GENERAL THE RIGHT HONOURABLE GEORGES P. VANIER.....	Aug. 1, 1959	Sept. 15, 1959
THE RIGHT HONOURABLE ROLAND MICHENER.....	Mar. 29, 1967	Apr. 17, 1967

**The Privy Council.**—The British North America Act of 1867 (Sect. 11) provides for "a council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada...". The Council that in fact advises the Queen's representative, the Governor General, is the Committee of the Privy Council the membership of which is identical with that of the Cabinet.

Membership in the Privy Council is for life. As of Aug. 12, 1971, there were 131 members, including the 28 Cabinet Ministers of the Government of the Day, former Cabinet Ministers, various members of the Royal Family, past and present Commonwealth Prime Ministers, Premiers of provinces, former Speakers of the Senate and the House of Commons of Canada and a few distinguished civilians. A member of the Privy Council of Canada is styled "Honourable" and may use the initials "P.C." after his name. A member of the Privy Council of the United Kingdom is styled "Right Honourable". The Governor General, the Chief Justice of Canada and the Prime Minister of Canada automatically assume the title "Right Honourable" on assumption of office.

The Privy Council as a whole has met on only a few ceremonial occasions but, as already stated, its constitutional responsibilities to advise the Crown on matters respecting the Government of Canada are performed exclusively by the Committee of the Privy Council (the Cabinet). The legal instruments through which executive authority is exercised are called Orders in Council. The procedure is for the Committee of the Privy Council to make a submission to the Governor General for his approval which he is obliged to give in almost all circumstances; with this approval, the submission becomes an Order in Council. Meetings of the Committee of the Privy Council or a sub-committee of this Committee are held without formal ceremony.

### 3.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Aug. 12, 1971

NOTE.—In this list the prefix "Rt. Hon." indicates membership in the British Privy Council, or is in accordance with the Table of Titles.

Member <sup>1</sup>	Date When Sworn In	Member <sup>1</sup>	Date When Sworn In
Hon. THOMAS ALEXANDER CRERAR.....	Oct. 12, 1917	Hon. AZELLUS DENIS.....	Apr. 22, 1963
Hon. HENRY HERBERT STEVENS.....	Sept. 21, 1921	Hon. GEORGE JAMES McILRAITH.....	Apr. 22, 1963
Hon. EDWARD JAMES McMURRAY.....	Nov. 14, 1923	Hon. WILLIAM MOORE BENEDICKSON.....	Apr. 22, 1963
H.R.H. THE DUKE OF WINDSOR.....	Aug. 2, 1927	Hon. ARTHUR LAING <sup>2</sup> .....	Apr. 22, 1963
Hon. THOMAS GEROW MURPHY.....	Aug. 7, 1930	Hon. MAURICE LAMONTAGNE.....	Apr. 22, 1963
Hon. WILLIAM EARL ROWE.....	Aug. 30, 1935	Hon. LUCIEN CARDIN.....	Apr. 22, 1963
Hon. COLIN WILLIAM GEORGE GIBSON.....	July 8, 1940	Hon. ALLAN JOSEPH MACÉACHEN <sup>2</sup> .....	Apr. 22, 1963

Hon. MITCHELL WILLIAM SHARP <sup>2</sup> .....	Apr. 22, 1963		

<sup>1</sup> Members of Her Majesty's Privy Council for Canada take rank *inter se* according to the dates of their being sworn in. <sup>2</sup> Ranks as a Member of the Cabinet. <sup>3</sup> Ranks as the Prime Minister of Canada.

The office of the President of the Privy Council was originally occupied, more often than not, by the Prime Minister but from time to time, especially in recent years, it has been occupied by another Minister. On July 5, 1968, the Prime Minister explained that the incumbent of the office of President of the Privy Council would also be the Government Leader in the House of Commons, with the broad responsibility of directing the business of the House, including such matters as the supervision of the Government's replies to questions in the House and the parliamentary returns in general, and also a special responsibility on behalf of the Government of ensuring that Parliament, through its operations and organization of business, can effectively discharge its vital role in the Canadian political process under the increasing pressure of modern government.

#### 4.—Duration and Sessions of Parliaments, 1958-71

NOTE.—Similar information for the 1st to the 12th Parliaments, covering the period from Confederation to 1917, is given in the 1940 Year Book, p. 46; that for the 13th to 17th Parliaments in the 1945 edition, p. 53; for the 18th and 19th Parliaments in the 1957-58 edition, p. 46; and for the 20th to the 23rd Parliaments in the 1965 edition, p. 65.

<sup>1</sup> The ordinary legal limit of duration for each Parliament is five years.

<sup>2</sup> Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (BNA Act, Sect. 50).

<sup>3</sup> Date of general election.

<sup>4</sup> Writs returnable.

<sup>5</sup> Dissolution of Parliament.

<sup>6</sup> Includes long adjournment from July 13 to Sept. 7, 1961.

<sup>7</sup> Government defeated in House of Commons on want of confidence motion.

<sup>8</sup> Includes long adjournment from Aug. 2 to Sept. 30, 1963.

<sup>9</sup> Includes long adjournment from Dec. 18, 1964 to Feb. 16, 1965.

<sup>10</sup> House adjourned on June 30 until Sept. 27 but dissolved on Sept. 8, 1965.

<sup>11</sup> Includes long adjournment from June 30 to Sept. 27, superseded by dissolution on Sept. 8, 1965.

<sup>12</sup> Includes 18-day Christmas adjournment, 11-day Easter adjournment, and two long adjournments from July 14 to Aug. 29 and Sept. 9 to Oct. 5.

<sup>13</sup> Includes adjournment from July 7, 1967 to Sept. 25, 1967; Christmas adjournment from Dec. 21, 1967 to Jan. 22, 1968; and Easter adjournment from Mar. 27, 1968 to Apr. 23, 1968.

<sup>14</sup> Includes Christmas adjournment from Dec. 20, 1968 to Jan. 14, 1969; Easter adjournment from Apr. 2, 1969 to Apr. 14, 1969; and summer adjournment from July 25, 1969 to Oct. 22, 1969.

<sup>15</sup> Includes two days devoted to Committee work.

<sup>16</sup> Includes Christmas adjournment from Dec. 19, 1969 to Jan. 12, 1970; Easter adjournment from Mar. 25, 1970 to Apr. 6, 1970; and summer adjournment from June 26, 1970 to Oct. 5, 1970.

<sup>17</sup> Includes one day devoted to Committee work.

**The Prime Minister.**—The Prime Minister is the leader of the political Party requested by the Governor General to form the Government, which almost always means that he is the leader of the Party with the strongest representation in the House of Commons. His position is one of exceptional authority, which stems in part from the success of the Party at an election and the role imputed to him for that success. The Prime Minister

chooses his Cabinet. When a member of his Cabinet resigns, the remainder of the Cabinet is undisturbed; when the Prime Minister vacates his office, this act normally carries with it the resignation of all those in the Cabinet.

A source of the authority of the Prime Minister lies in his prerogative to recommend the dissolution of Parliament. This prerogative, which in most circumstances permits him to precipitate an election, is a source of considerable power both in his dealings with his colleagues and with the opposition parties in the House of Commons.

Another source of the Prime Minister's authority derives from the appointments which he recommends. These include Privy Councillors, Cabinet Ministers, Lieutenant-Governors of the provinces, provincial administrators, Speaker of the Senate, Chief Justices of all courts, and Senators. The Prime Minister also recommends the appointment of a new Governor General to the Sovereign, although this normally follows consultation with his Cabinet.

The Prime Ministers since Confederation are listed in Table 5.

**5.—Prime Ministers since Confederation, 1867**

Ministry	Name	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 — Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 — Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 — Apr. 27, 1896
7	Rt. Hon. Sir CHARLES TUPPER.....	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 — Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 — Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 12, 1917 — July 10, 1920 (Unionist Administration)
11	Rt. Hon. ARTHUR MEIGHEN.....	July 10, 1920 — Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Dec. 29, 1921 — June 28, 1926
13	Rt. Hon. ARTHUR MEIGHEN.....	June 29, 1926 — Sept. 25, 1926
14	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Sept. 25, 1926 — Aug. 6, 1930
15	Rt. Hon. RICHARD BEDFORD BENNETT.....	Aug. 7, 1930 — Oct. 23, 1935
16	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Oct. 23, 1935 — Nov. 15, 1948
17	Rt. Hon. LOUIS STEPHEN ST. LAURENT.....	Nov. 15, 1948 — June 21, 1957
18	Rt. Hon. JOHN GEORGE Diefenbaker.....	June 21, 1957 — Apr. 22, 1963
19	Rt. Hon. LESTER BOWLES PEARSON.....	Apr. 22, 1963 — Apr. 20, 1968
20	Rt. Hon. PIERRE ELLIOTT TRUDEAU.....	Apr. 20, 1968 — ...

**The Cabinet.**—As stated on p. 80, the Cabinet's primary function in the Canadian political system is to determine priorities among the demands expressed by the people and to determine the policies to meet those demands. The Cabinet is a committee of Ministers chosen by the Prime Minister, generally from among members of the House of Commons, although there have usually been one or two Ministers chosen from the Senate including the Leader of the Government in the Senate. It is unusual for a Senator to head a department of government because the Constitution provides that measures for appropriating public funds or imposing taxes must originate in the House of Commons and, as a result, almost all important legislation is initiated in the House of Commons. Also, another Minister in the House of Commons would have to speak on behalf of a Senator who headed a department, in respect of its affairs.

Members of the Twentieth Ministry as at Oct. 20, 1971, are given in Table 6. Salaries, allowances and pensions of Cabinet Ministers are given at pp. 106-107.

**6.—Members of the Twentieth Ministry, as at Oct. 20, 1971<sup>1</sup>**

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions.

Office	Occupant	Date of First Appointment	Date of Appointment to Present Portfolio
Prime Minister.....	Rt. Hon. PIERRE ELLIOTT TRUDEAU..	Apr. 4, 1967	Apr. 20, 1968
Leader of the Government in the Senate...	Hon. PAUL JOSEPH JAMES MARTIN....	Apr. 22, 1963	Apr. 22, 1968

<sup>1</sup> Any change occurring between Oct. 20, 1971 and the date of going to press will be carried in Appendix I.

Each Cabinet Minister usually assumes responsibility for one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios. A Minister without portfolio may be invited to join the Cabinet because the Prime Minister wishes to have him in the Cabinet but without the heavy duties of running a department, or he may be invited to join the Cabinet to provide a suitable balance of regional representation. Because of the cultural and geographical diversity that exists in Canada, it is necessary for the Prime Minister to give more attention to the representational aspect of his Cabinet than, perhaps, his counterparts in many other countries.

With the enactment of the Ministries and Ministers of State Act (Government Organization Act, 1970), four categories of Ministers of the Crown may be identified: departmental Ministers, Ministers without portfolio, and two types of Ministers of state. Ministers of state "for designated purposes", may occupy an office created by Proclamation; are charged with responsibilities for developing new and comprehensive policies in areas where the development of such policies is of particular urgency and importance; have a mandate effectively determined by the Governor in Council which would be of such duration as to enable them to come to grips with the policy problems assigned to them; may receive powers, duties and functions and exercise supervision and control of relevant elements of the public service; and seek parliamentary appropriations independently of any Minister

to cover the cost of their staff and operations. Other Ministers of state may be appointed to assist a departmental Minister in the discharge of his responsibilities. They may receive statutory powers, duties and functions; are limited in number by the appropriations that Parliament is willing to pass; and receive the same salary as a Minister without portfolio provided for them in the estimates of the Minister with whom they are associated.

Ministers in all four categories are appointed on the advice of the Prime Minister by commission under the Great Seal of Canada, to serve at pleasure, and to be responsible to Parliament as members of the Government and for any responsibility that might be assigned to them by law or otherwise.

### **The Cabinet Committee System**

In Canada, almost all executive acts of the Government are carried out in the name of the Governor in Council. The Committee of the Privy Council (the Cabinet) makes submissions to the Governor General for his approval, and he is bound by the Constitution in nearly all circumstances to accept them. About 2,200 Orders in Council were enacted in 1970 and, although some were of a fairly routine nature and did not require much discussion in Cabinet of the policy underlying them, others were of major significance and required extensive deliberation, sometimes covering months of meetings of officials and Cabinet committees, as well as of the full Cabinet. In addition to the determination of the policy underlying the executive acts of the Government, there are literally hundreds of other policy issues that must be resolved during the course of a year. The policy underlying each piece of legislation must be considered in Cabinet and when that is approved and legislation is drafted, it must be considered in detail so that each clause and each punctuation mark has been approved by Cabinet. Recently, between 40 and 60 Bills have been considered by Cabinet during the course of a parliamentary session. Proposals for sweeping reform of large areas of government organization or administration, and policy to be adopted in fundamental constitutional changes or at a major international conference are among the issues which, on occasion, demand such extensive and detailed consideration.

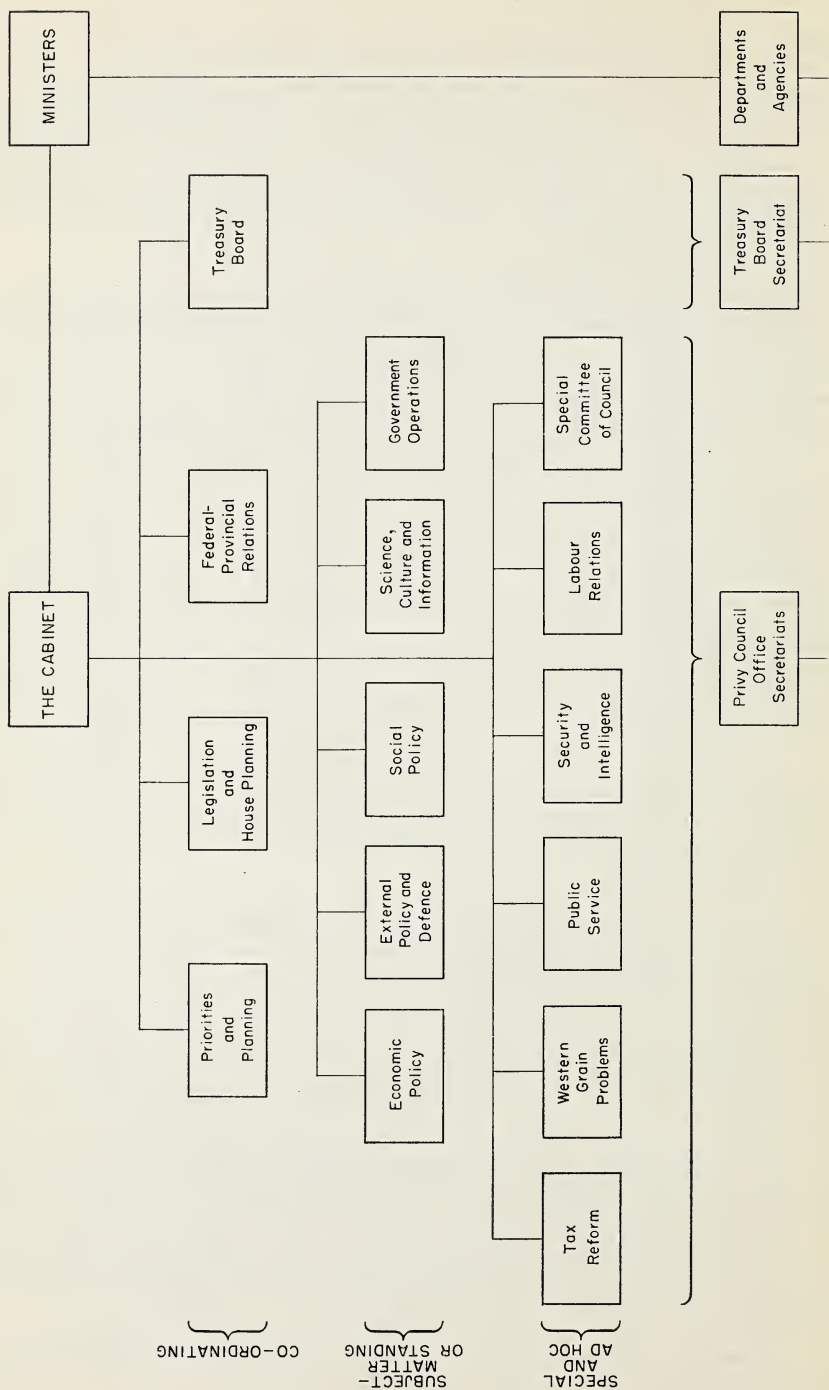

It is clear that the nature and volume of policy issues to be decided on by Cabinet do not lend themselves to discussion by 25 or 30 Ministers. The first Cabinet committee system was established after the outbreak of World War II but, since that time and more particularly in recent years, growing demands placed on the executive have stimulated the development of new approaches to the devolution of the responsibilities of Cabinet to sub-committees thereof.

Cabinet committees tend to have a membership of fewer than 10 Ministers and therefore provide a forum capable of ensuring thorough study of policy proposals. The membership of Cabinet committees is confidential and the same rules of secrecy that apply to the deliberations of Cabinet apply to those of Cabinet committees. If it were otherwise, there might be a tendency for them to develop an importance and authority of their own which would be inconsistent with the principle of the collective responsibility of Ministers. The Prime Minister determines the establishment of Cabinet committees and their composition and terms of reference. Ministers may invite one or two officials as advisers during Cabinet committee meetings. The secretariat of the Cabinet committees is provided by the Privy Council Office and the Secretary of a Cabinet committee is usually also an Assistant Secretary to the Cabinet. The Treasury Board, which is a Cabinet committee—or more precisely a sub-committee of the Committee of the Privy Council—is the only exception; it has its own secretariat headed by a secretary who has the status of a deputy minister.

Under the direction of the Prime Minister, the Secretary to the Cabinet prepares Cabinet agenda and refers memoranda to Cabinet to the appropriate Cabinet committee for study and report to the full Cabinet. Except where the Prime Minister instructs otherwise, all memoranda to Cabinet are submitted under the signature of the Minister concerned.

The terms of reference of Cabinet committees cover virtually the total area of government responsibility. All memoranda to Cabinet are first considered by a Cabinet committee,

# THE CABINET COMMITTEE SYSTEM

except when they are of exceptional urgency or when the Prime Minister otherwise directs, in which case an item may be considered immediately by the full Cabinet.

On Apr. 30, 1968, the Prime Minister established a new format for Cabinet committees. The trend in previous years was for the development of many committees to meet immediate requirements which eventually disappeared. As a result, there was a proliferation of committees and the terms of reference of some became irrelevant in terms of the demands placed on the Cabinet. The new system reduced the number of standing committees of Cabinet to eight—four subject-matter committees and four co-ordinating committees. The four subject-matter committees set up were: External Policy and Defence; Economic Policy and Programs; Communications, Works and Urban Affairs; and Social Policy. The four co-ordinating committees were: Priorities and Planning; Legislation and House Planning; Federal-Provincial Relations; and the Treasury Board. The Treasury Board is a statutory committee of the Committee of the Privy Council and under the Financial Administration Act has the status of a department. The following chart indicates the relationship of these committees to the Cabinet process.

In 1969 and 1970, the arrangement established in 1968 was further modified. The co-ordinating committees of Cabinet remained but the subject-matter or standing committees were: Economic Policy, External Policy and Defence, Social Policy, Science, Culture and Information, and Government Operations. These committees meet on a regular basis. In addition, there are six special committees of the Cabinet which meet as required: the Special Committee of Council which considers all submissions to the Governor in Council on behalf of the "Committee of the Privy Council", and the Cabinet committees on the Public Service, Security and Intelligence, Labour Relations, Tax Reform, and Western Grain Problems.

Although the importance of the Cabinet committee system may vary from Government to Government, evidence of the utility of this system is the growing reliance that has been placed on Cabinet committees since the system was established at the end of the Second World War. The following is a brief outline of the involvement of Cabinet and Cabinet committees in respect of a piece of legislation that the Government ultimately introduces into the House of Commons or the Senate.

Either on the initiative of a Minister or his departmental officials, a policy proposal is prepared, the implementation of which will require new legislation or the amendment of existing legislation. The policy proposal is submitted, under the Minister's signature, for consideration by the appropriate subject-matter committee. If approval is given, the proposal goes forward to Cabinet for confirmation. If Cabinet confirms the Committee's decision, the Department of Justice is given instructions by the Minister who made the proposal to prepare a draft Bill expressing in legal terms the intent of the policy proposal. If the draft Bill meets with the Minister's approval, he submits it to the Cabinet Committee on Legislation and House Planning where it is examined from a legal point of view rather than on the basis of its underlying policy. If the Cabinet Committee agrees that the Bill is acceptable in all respects and that it could be introduced into Parliament, it so reports to Cabinet and Cabinet decides whether to confirm the Committee's decision. If confirmation is given, the Prime Minister initials the Bill and it is then introduced either into the Senate or the House of Commons, depending on constitutional and political considerations.

The order and manner in which a Bill is considered in Parliament is the responsibility of the President of the Privy Council and House Leader who negotiates these matters with his counterparts in the opposition Parties. If a Bill is to be introduced into the Senate, the House Leader will consider questions such as timing and tactics with the Leader of the Government in the Senate, who in turn will negotiate the consideration of the Bill with his counterpart in the Senate.

**The Privy Council Office.**—The Privy Council is a secretariat which provides staff support to the Select Committee of the Privy Council and to the Cabinet. For the purposes

of the Financial Administration Act, it is considered a department of government with duties as described on p. 148. The Privy Council Office provides secretariats to serve the Cabinet, the Select Committee of the Privy Council and their various sub-committees. Since the Prime Minister is, in effect, chairman of the Cabinet, he is the Minister responsible for the Privy Council Office. The public servant who directs the work of the Privy Council Office is known as the Clerk of the Privy Council and Secretary to the Cabinet. He is the senior member of the Public Service.

**Parliamentary Secretaries.**—The Parliamentary Secretaries Act, which came into force in June 1959, provided for the appointment of 16 Parliamentary Secretaries from among the members of the House of Commons to assist Ministers in the performance of their duties. That Act was amended by the Government Organization Act, 1970, which allows the number of Parliamentary Secretaries to equal the number of Ministers who hold offices listed in Sect. 4 of the Salaries Act (i.e., Ministers with departmental responsibilities, the Prime Minister and the President of the Privy Council). A Parliamentary Secretary works under the direction of his Minister and has no legal authority in respect of the department with which he is associated, nor is he given acting responsibility or any of the powers, duties and functions of a Minister in the event of his Minister's absence or incapacity. Parliamentary Secretaries are appointed by the Prime Minister and hold office for 12 months.

At Oct. 20, 1971, the following Parliamentary Secretaries were in office:—

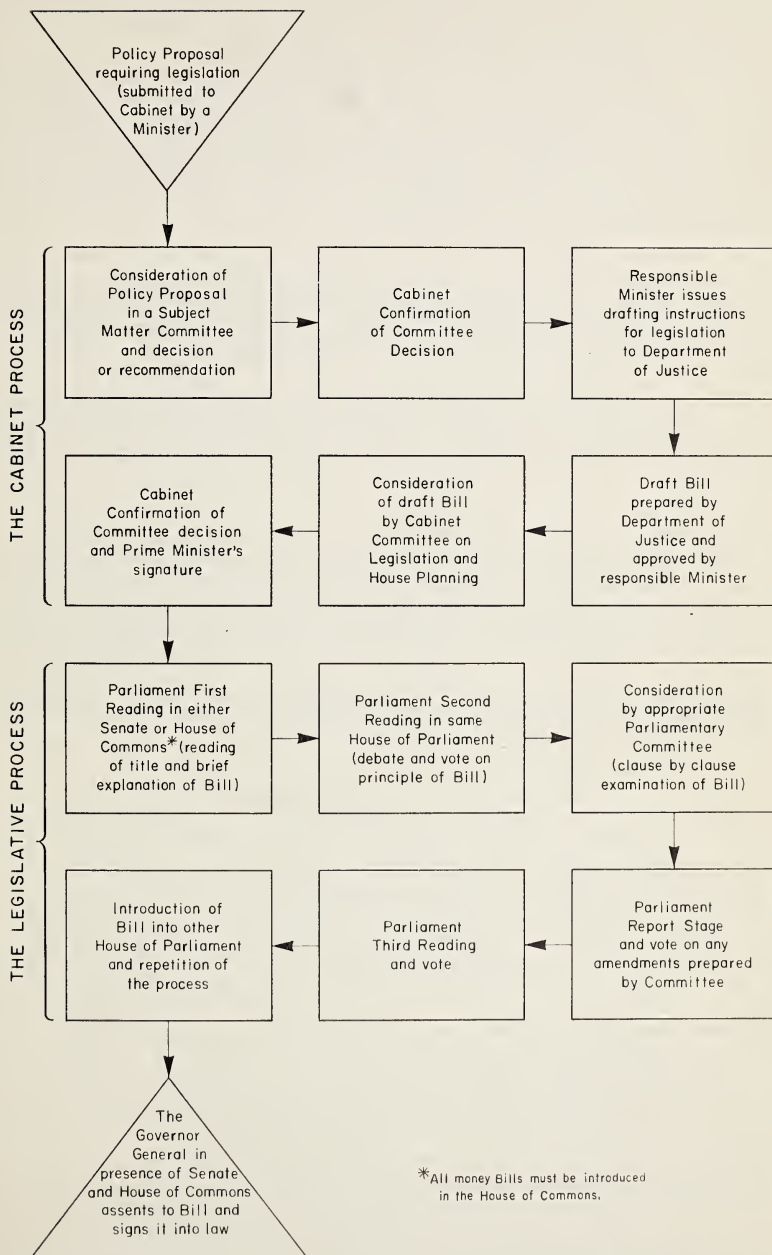

<u>Secretary</u>	<u>Minister</u>
BARNETT J. DANSON.....	Prime Minister
GASTON ISABELLE.....	Secretary of State for External Affairs
PAUL ST. PIERRE.....	Secretary of State for External Affairs
GUSTAVE BLOUIN.....	Minister of Public Works
JAMES A. JEROME.....	President of the Privy Council
GASTON CLERMONT.....	President of the Treasury Board
PATRICK MAHONEY.....	Minister of Finance
BRUCE HOWARD.....	Minister of Industry, Trade and Commerce
JOHN ROBERTS.....	Minister of Regional Economic Expansion
ALAN B. SULATYCKY.....	Minister of Energy, Mines and Resources
GERALD R. COBBE.....	Postmaster General
ALBERT BÉCHARD.....	Minister of Justice
JUDD BUCHANAN.....	Minister of Indian Affairs and Northern Development
RAY PERRAULT.....	Minister of Labour
JACK CULLEN.....	Minister of National Defence
ANDRÉ OUELLET.....	Minister of National Health and Welfare
HUGH FAULKNER.....	Secretary of State
EYMARD G. CORBIN.....	Minister of the Environment
MARCEL LESSARD.....	Minister of Agriculture
LLOYD FRANCIS.....	Minister of Veterans Affairs
D. R. TOLMIE.....	Minister of Consumer and Corporate Affairs
GÉRARD DUQUET.....	Minister of Transport
DAVID WEATHERHEAD.....	Minister of State for Urban Affairs
STEVEN OTTO.....	Minister of Supply and Services
MARCEL PRUD'HOMME.....	Minister of Manpower and Immigration
ROLAND COMTOIS.....	Minister of Communications
DOUGLAS HOGARTH.....	Solicitor General

### The Passage of Legislation

If a Bill is introduced in the House of Commons and is approved there, it must then be introduced into the Senate and follow a procedure similar to that followed in the House. If a Bill is first introduced into the Senate, the reverse procedure is followed. There are three types of Bills: (1) public Bills introduced by the Government; (2) public Bills introduced by private members of Parliament; and (3) private Bills introduced by private members of Parliament. Each type is treated in a slightly different manner, and there are even differences in procedure when the House deals with Government Bills introduced pursuant to "supply" and "ways and means" motions on the one hand, and other Government Bills on the other. The following is the procedure for a typical Government Bill which has been introduced in the House of Commons.

## PASSAGE OF LEGISLATION

The sponsoring Minister gives notice that he intends to introduce a Bill on a given subject. Not less than 48 hours later he moves for leave to introduce the Bill and that the Bill be given first reading. This is permitted automatically because introduction or first reading of a Bill does not imply approval of any sort and it is only after first reading that the Bill is ordered to be printed for distribution to the members.

At a later sitting the Minister moves that the Bill be given second reading and that it be referred to an appropriate committee of the House of Commons. A favourable vote on the motion for second reading represents approval of the principle of the Bill so there is often an extensive debate, which, according to the standing orders of the House of Commons, must be confined to the principle of the Bill. The debate culminates in a vote which, if favourable, results in the Bill being referred to the appropriate committee of the House, where it is given clause-by-clause consideration.

At the committee stage, expert witnesses and interested parties may be invited to give testimony pertaining to the Bill, and the proceedings of the committee may cover many weeks. Upon completion of its consideration of the Bill, the House committee prepares a report which it submits to the House of Commons. The House must then decide whether to accept the committee's report, including any amendments that the committee has made to the Bill.

At the report stage any member may, on giving 24 hours notice, move an amendment to the Bill, and all such amendments are debated and put to a vote. Following that, a motion "that the bill be concurred in" or "that the bill, as amended, be concurred in", is put to the vote.

Following this report stage, the Minister moves that the Bill be given third reading and passage. Debate of this motion is limited to whether the Bill should be given third reading. Amendments are permitted at this stage but they must be of a general nature, similar to those allowed on second reading. If the vote is favourable, the Bill is then introduced into the Senate where it goes through a somewhat similar process. (Since each House has its own rules of procedure, the processes in the two may not be identical, and are not identical at this time.) At the end of this procedure, the Bill is presented to the Governor General for Royal Assent and for his signature. Depending on the provisions in the Bill itself, it may come into force when it is signed by the Governor General, on an appointed day, or when it is officially proclaimed.

### Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of The Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House, subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice, most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVI for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1964, the legislative authority of the Parliament of Canada extends to the following: the amendment of the Constitution of Canada (subject to certain exceptions—see p. 77); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and

providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada may make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions. By the British North America Act, 1964, which received Royal Assent on July 31, 1964, this amendment was extended at the request of the Parliament of Canada (June 19, 1964) to permit the payment of supplementary benefits, including survivors' and disability benefits irrespective of age, under a contributory pension plan.

**The Senate.**—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is summarized by province in Table 7.

Senators are appointed by the Governor General by instrument under the Great Seal of Canada. The actual power of appointing Senators resides by constitutional usage in the Prime Minister, whose advice the Governor General accepts in this regard. Until the passage of "An Act to make provision for the retirement of members of the Senate" (SC 1965, c. 4), assented to on June 2, 1965, Senators were appointed for life; that Act fixes at 75 years the age at which any person appointed to the Senate after the coming into force of the Bill will cease to hold his place in the Senate.

In each of the four main divisions of Canada except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec, one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The powers of the Senate, in all respects except one, are co-extensive with those of the House of Commons. The one exception is that under the Canadian Constitution all "money Bills", i.e., Bills to impose taxes or appropriate public moneys, must originate in the House of Commons. The concurrence of the Senate is necessary before any piece of legislation, public or private, can become law. Government Bills, other than money Bills, may be introduced in either House. A substantial percentage of these are now introduced in the Senate where they may be freely discussed and amended and the House of Commons thus given the benefit of their prior scrutiny by the Senate.

The Senate also retains its traditional role in respect of legislation originating in the House of Commons, namely, to take a "sober second look" at such legislation. Amendments may be made thereto and such amendments are often concurred in by the House of

Commons. If there is disagreement concerning such amendments and the disagreement is not resolved by a conference between representatives of the two Houses, the legislation cannot be further proceeded with.

The Senate provides a national forum for the discussion of public issues and the airing of grievances from whatever part of Canada they may emanate. The Senate, through its own committees and its participation in joint committees of both Houses, is particularly active in making studies in depth on matters of public concern.

<sup>1</sup> Any change occurring between June 30, 1971 and the date of going to press of this volume will be carried in Appendix I.

**The House of Commons.**—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be re-adjusted provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended (RSC 1952, c. 304, Sect. 51) (see Canada Year Book 1963-64, p. 75) to ensure that the representation of any province should not be reduced by more than 15 p.c. of the representation to which it was otherwise entitled after the last census, subject however to the qualifications that the effect of the rule should not be to make the representation of a province with a smaller population greater than any province with a larger population.

Subsequently in 1952, Parliament enacted legislation (RSC 1952, c. 334), effective in the General Election of 1953 and in each successive General Election down to that of the Twenty-seventh Parliament (Nov. 8, 1965), which provided that representation in the House of Commons should be on the following basis:—

Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members.

**1965 Redistribution of Representation in the House of Commons.**—The Representation Commissioner Act setting up the office and duties of the Representation Commissioner was given Royal Assent on Dec. 21, 1963. The Electoral Boundaries Readjustment Act providing for the establishment of Electoral Boundaries Commissions to report upon and to provide for the readjustment of the representation of the provinces in the House of Commons in accordance with the findings of the 1961 Census of Population was given Royal Assent on Nov. 20, 1964.

Pursuant to Sect. 11 of the Electoral Boundaries Readjustment Act, the Dominion Statistician sent to the Representation Commissioner a certified return showing the population of Canada and of each of the provinces and the population of Canada by electoral districts as ascertained by the 1961 Census. The Representation Commissioner calculated the number of members of the House of Commons to be assigned to each of the provinces subject and according to the provisions of Sect. 51 of the British North America Act, 1867, and the rules provided therein. He then caused a statement to be published in the *Canada Gazette* of Nov. 28, 1964, setting forth the following results:—

Eighty-eight members of the House of Commons shall be elected for the Province of Ontario, seventy-four for the Province of Quebec, eleven for the Province of Nova Scotia, ten for the Province of New Brunswick, thirteen for the Province of Manitoba, twenty-three for the Province of British Columbia, four for the Province of Prince Edward Island, thirteen for the Province of Saskatchewan, nineteen for the Province of Alberta and seven for the Province of Newfoundland.

The Governor General, by proclamation published in the *Canada Gazette*, established an Electoral Boundaries Commission for each province. It was the task of each Commission to prepare, with all reasonable dispatch, a report setting forth its recommendations concerning the division of its particular province into electoral districts and the recommendations concerning the description of the boundaries of each such district and the representation and name to be given thereto. A copy of the 1961 Census return was sent to the chairman of each Commission immediately after its members were appointed.

Pursuant to Sect. 8 of the Representation Commissioner Act, maps were prepared in the office of the Representation Commissioner showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province; these maps were then supplied to the respective Commissions. The Commissions complied with the procedure of the Electoral Boundaries Act and com-

pleted their reports within the time prescribed, which was one year. Two certified copies of each report were received by the Representation Commissioner; as required by Sect. 19(1) of that Act, one of these copies was transmitted to the Speaker of the House of Commons, who in turn laid it before the House of Commons.

Then followed a period of thirty days in which objections in writing, signed by no fewer than ten members of the House of Commons, were filed with the Speaker specifying the provisions of the report objected to and the reasons for the objection. A further period of 15 days was set aside in which the House of Commons was to consider the matter of the objections; this period was increased to 45 sitting days by an Act, assented to on Feb. 23, 1966, entitled "An Act to extend the time for consideration of objections pursuant to Sect. 20 of the Electoral Boundaries Readjustment Act with respect to the reports of commissions established for the decennial census taken in the year 1961".

Several objections were filed with the Speaker, the motions were taken up and considered and the reports referred back to the Representation Commissioner by the Speaker and then to the Commissions. On the expiration of a thirty-day period for that purpose, the Commissions returned their reports with or without amendment, through the Representation Commissioner to the Speaker. Then a draft representation order was prepared by the Representation Commissioner to be transmitted to the Secretary of State. This order specified the number of members of the House of Commons who shall be elected for each of the provinces as calculated by the Representation Commissioner and, dividing each of the provinces into electoral districts, described the boundaries of each such district and specified the representation and name given thereto, in accordance with the recommendations contained in the reports. The Governor in Council, by proclamation of June 16, 1966, declared the draft representation order to be in force, effective upon the dissolution of the then-existing Parliament.

At subsequent elections, according to the representation order set out in the Schedule to the Proclamation, 88 members of the House of Commons shall be elected for the Province of Ontario, 74 for the Province of Quebec, 11 for the Province of Nova Scotia, 10 for the Province of New Brunswick, 13 for the Province of Manitoba, 23 for the Province of British Columbia, four for the Province of Prince Edward Island, 13 for the Province of Saskatchewan, 19 for the Province of Alberta and seven for the Province of Newfoundland. In addition, one member each will be elected for the Yukon Territory and the Northwest Territories, making a total representation of 264 in the House of Commons.

The number of representatives of each province elected at each of the 28 General Elections since Confederation is given in Table 9.

<sup>1</sup> By-elections held between June 30, 1971 and the date of going to press will be carried in Appendix I.

**Salaries, Allowances and Pensions of Senators and Members of the House of Commons.**—Members of the Senate and House of Commons receive a sessional allowance at the rate of \$18,000 per annum. In addition, for each session of Parliament, they may be paid travelling expenses between their place of residence or constituency and Ottawa as may be required for the performance of their duties as members of the Senate or House of Commons. Senators receive an annual expense allowance of \$4,000 and members of the House of Commons receive an expense allowance of \$8,000 to \$9,650 dependent upon the electoral district represented; neither is subject to income tax and is payable quarterly. The member of the Senate occupying the recognized position as Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of \$10,000 and to the member of the Senate occupying the recognized position as Opposition Leader in the Senate there is paid, in addition to his sessional allowance, an annual allowance of \$6,000; but if the Leader of the Government is in receipt of a salary under the Salaries Act the annual allowance is not paid. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition in the House of Commons \$15,000 a year in addition to the sessional and expense allowances each receives as a member of Parliament. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the sessional and expense allowances, the latter being not taxable. Additional annual allowances of \$4,000 (beyond the above-noted sessional allowance) are provided to each Leader of a Party having a recognized membership of twelve or more persons in the House of Commons other than the Prime Minister and the member occupying the recognized position as Leader of the Opposition in the House of Commons and, likewise, to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of \$9,000 per annum. The Deputy Speaker of the House of Commons receives a salary of \$6,000 per annum. The Speakers of the Senate and of the House of Commons are also entitled to \$3,000 in lieu of residence and the Deputy Speaker of the House of Commons an allowance of \$1,500 in lieu of residence; these allowances are not taxable. The Deputy Chairman of Committees receives an annual allowance of \$4,000. Parliamentary Secretaries to the Ministers of the Crown receive an annual allowance of \$4,000 a year, in addition to their sessional and expense allowances. A motor vehicle allowance of \$2,000 is paid to each Minister of the Crown and to the recognized Leader of the Opposition in the House of Commons, and a motor vehicle allowance of \$1,000 is paid to the Speakers of the Senate and of the House of Commons; these allowances are not taxable.

A member of Parliament contributes, by reservation,  $7\frac{1}{2}$  p.c. of his sessional indemnity toward his retirement allowance, which is based on the average of the sessional indemnity received over the best consecutive six years of his pensionable service accumulated as follows: (1)  $3\frac{1}{2}$  p.c. of this six-year average for each of the first 10 years of pensionable service; (2) 3 p.c. of this average for each of the next 10 years; (3) 2 p.c. of this average for each of the next five years; and (4) 2 p.c. of this average for each of the years of pensionable service earned by his contributions from salary for extra duties performed as a Minister, etc.; subject to an over-all maximum of 75 p.c. of that best six-year average. The survivor's benefits are as follows: (1) 60 p.c. of the member's pension entitlement to the widow or widower; (2) if there is a surviving parent, 10 p.c. of the member's pension entitlement for each child up to three; and (3) if there is no surviving parent, 20 p.c. to the member's pension entitlement for each child up to four. A member who was a member at Mar. 31, 1970, could have decided to stay under the old plan. All items that were applicable under the old plan remain in effect.

An Act to make provision for the retirement of members of the Senate (SC 1965, c. 4) entitles a Senator appointed after June 2, 1965 to become a contributor under the provisions

of the Members of Parliament Retiring Act. Senators appointed prior to that date and who have not attained the age of 75 years, who elect under the provisions of this Act, are also entitled to become contributors. Under the provisions of the Retirement Act, as amended, a Senator contributes, by reservation, 6 p.c. of \$12,000. A Senator appointed before June 2, 1965 who (a) within one year of attaining the age of 75 years resigns his place in the Senate or (b) resigns due to some permanent infirmity disabling him from performing his duties in the Senate, may be granted an annuity equal to \$8,000. The widow of a person granted such an annuity may receive an annuity equal to three fifths of the annuity to the ex-member of the Senate.

Every former Prime Minister who held office for four years will receive from the Consolidated Revenue Fund an allowance of two thirds of the annual salary provided for Prime Ministers under the Salaries Act, the allowance to commence when the former Prime Minister ceases to hold office, or attains the age of 70 years, whichever is the later, and to continue during his lifetime. The widow of a Prime Minister will receive an annual payment of one third of the allowance that was being paid or that would have been paid to her husband, where he dies without receiving the allowance, such allowance to commence immediately after the death of her husband and to continue during her natural life or until her remarriage. None of these allowances is payable while the recipient is a Senator or a member of the House of Commons.

**The Federal Franchise.**—The present federal franchise laws are contained in the Canada Elections Act (SC 1969-70, c. 49). Generally, the franchise is conferred upon all Canadian citizens, men and women, who have attained the age of 18 years and are ordinarily resident in the electoral district on the date fixed for the beginning of the enumeration at the election. British subjects, other than Canadian citizens, who were qualified as electors on June 25, 1968 and have not, since that date, ceased to be ordinarily resident in Canada, are also qualified as electors. This privilege granted to a restricted group of British subjects will terminate at midnight on June 26, 1975. Persons denied the right to vote are:—

- (1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) judges appointed by the Governor General in Council;
- (3) the returning officer for each electoral district;
- (4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) persons restrained of their liberty of movement or deprived of the management of their property by reason of mental disease; and
- (6) persons disqualified under any law relating to the disqualification of electors for corrupt or illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians the same rights with respect to the franchise as enjoyed by any other Canadian citizens, without taking from them any of the rights and privileges to which they are entitled under the Indian Act. The Eskimos who are Canadian citizens are qualified as electors for the purpose of federal elections, and the assumption of that right in the far-flung communities of the Canadian Far North has grown with the establishment by the Government of electoral districts and polling facilities.

The Special Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Canadian Forces, for members of the Public Service posted abroad, and also for veterans in receipt of treatment or domiciliary care in certain institutions.

## 12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1962, 1963, 1965 and 1968

NOTE.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; those for 1945 in the 1957-58 edition, p. 57; those for 1949, 1953 and 1957 in the 1962 edition, p. 71; and those for 1958 in the 1966 edition, p. 90.

### Subsection 3.—The Judiciary

#### The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act from time to time to provide for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Federal Court of Canada and certain miscellaneous courts.

**Supreme Court of Canada.**—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1970, c. S-19), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgement of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgement with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgement whether final or not. Appeals in respect of indictable

offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgement of the Supreme Court of Canada in all cases is final and conclusive.

### 13.—Chief Justice and Judges of the Supreme Court of Canada, as at June 30, 1971

(In order of seniority)

Hon. Mr. Justice LOUIS-PHILIPPE PIGEON.....	Oct. 6, 1967
Hon. Mr. Justice BORA LASKIN.....	Mar. 19, 1970

<sup>1</sup> First appointed a Judge of the Supreme Court, Dec. 23, 1949.

**Federal Court of Canada.\***—The Federal Court of Canada is constituted by Act of the Parliament of Canada under Sect. 101 of the British North America Act, 1867, which, after authorizing the creation of the Supreme Court of Canada, confers on the Parliament of Canada authority to constitute other courts for the better administration of the laws of Canada. The Federal Court of Canada is a court of law, equity and admiralty and it is a superior court of record having civil and criminal jurisdiction (Sect. 3 of the Act). It was established in 1875 as the Exchequer Court of Canada, which it replaced in December 1970 (SC 1970-71, c. 1).

The Court has two divisions called the Federal Court—Appeal Division, and the Federal Court—Trial Division. The Appeal Division may be called the Court of Appeal or Federal Court of Appeal (Sect. 4 of the Act). The Court of Appeal consists of the Chief Justice of the Federal Court of Canada and three other judges. The Trial Division consists of the Associate Chief Justice of the Federal Court of Canada and seven other judges. Every judge is an ex officio member of the Division of which he is not a regular member (Sect. 5).

In addition to the establishment of full-time judges, an added capacity to cope with the purely judicial work of the Court is provided by the authority to invite retired federally appointed judges to act as Deputy Judges of the Court (Sect. 10). This authority extends also to federally appointed judges who are still in office, but only with the consent of the appropriate Chief Justice or Attorney General. Former District Judges in Admiralty are also Deputy Judges of the Court and their services can be utilized on a limited basis (Sect. 60(3)).

Provision is also made in the Act for quasi-judicial officers called Prothonotaries (Sect. 12). Their duties are defined by the Rules and may be of a judicial nature (Sect. 46(1) (h)). In addition to being taxing masters, they can, subject to supervision by the Court, deal with interlocutory work, and even take trials in minor matters as the Associate Chief Justice may find expedient in order to ensure the expeditious dispatch of the Court's business.

While all the full-time judges must reside in or near the National Capital Region (Sect. 7), each Division of the Court can sit any place in Canada and the place and time of the sittings must be arranged to suit the convenience of the litigants (Sects. 15 and 16). In addition, there is authority in the statute (Sect. 7(2)) for a rota of judges to provide for a continuity of judicial availability in any place where the volume of work, or other circumstances, makes such an arrangement expedient. This provision receives its first application in respect of British Columbia.

\* Extracted from *The Federal Court of Canada*, an official publication authorized by the Minister of Justice, March 1971. Available from Information Canada, Ottawa. (Cat. No. J2-1971)

**Miscellaneous Courts.**—*Railway Act and National Transportation Act.*—The Railway Act, 1903 (RSC 1970, c. R-2) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1970, c. T-14) the name was changed to the Board of Transport Commissioners for Canada, and by the National Transportation Act, 1967 (RSC 1970, c. N-17) to the Canadian Transport Commission. This court exercises jurisdiction with respect to transport matters under the Railway Act and under the National Transportation Act, and with respect to telegraph and telephone matters under the Railway Act. The Governor in Council is given jurisdiction to vary or rescind any order of the Commission and an appeal lies from the Commission to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

*Bankruptcy Act.*—By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1970, c. B-3) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

*Tax Review Board Act.*—The Tax Review Board, created in 1949 as the Income Tax Appeal Board and later changed to the Tax Appeal Board, now operates under the Tax Review Board Act 1970 (SC 1970-71, c. 11). The Board is a court of record and has jurisdiction to hear appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act, the Old Age Security Act and certain sections of the Canada Pension Plan. An appeal lies from the Board to the Federal Court of Canada and a further appeal from that Court to the Supreme Court of Canada (see also p. 151).

*National Defence Act.*—The Court Martial Appeal Court was established in 1959 by an amendment to the National Defence Act (RSC 1970, c. N-4). The judges of the Court are not fewer than four judges of the Federal Court of Canada designated by the Governor in Council and such additional judges of a superior court of criminal jurisdiction as are appointed by the Governor in Council. The Governor in Council designates one of the judges to be president of the Court. The Court hears appeals from courts martial respecting the legality of a finding of guilty on any charge and the legality of a sentence passed by a court martial. An appeal lies from the Court Martial Appeal Court to the Supreme Court of Canada on a question of law only.

### Provincial and Territorial Judiciaries\*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92(14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1970, c. J-1 and amendments).

### Salaries, Allowances and Pensions of Judges

Sect. 100 of the British North America Act provides that the "Salaries, Allowances, and Pensions of the Judges of the Superior, District, and County Courts (except the Courts of Probate in Nova Scotia and New Brunswick) and of the Admiralty Courts in Cases where

\* More detailed information concerning provincial and territorial judiciaries is given in the 1970-71 Year Book, pp. 100-106.

the Judges thereof are for the Time being paid by Salary, shall be fixed and provided by the Parliament of Canada". These are provided by the Judges Act (RSC 1970, c. J-1 as amended by SC 1970-71, c. 55).

As of Jan. 1, 1972, the salaries of the judges of the courts are as follows. The salary of the Chief Justice of Canada is \$47,000 per annum and the salaries of the puisne judges of the Supreme Court of Canada are \$42,000 per annum. The salaries of the Chief Justice and the Associate Chief Justice of the Federal Court of Canada are \$39,000 per annum and the salaries of the other judges of the Federal Court are \$35,000 per annum. The salaries of deputy judges of the Federal Courts, who are judges of other superior courts and were formerly district judges in admiralty pursuant to the Admiralty Act, which was repealed, admiralty jurisdiction now being provided for by the Federal Court Act, are as follows: Ontario, \$1,500 and Newfoundland three judges at \$333.33 each.

All Chief Justices of provincial superior courts and the Associate Chief Justice of the Superior Court of Quebec as of Jan. 1, 1972 receive salaries of \$39,000 per annum; the puisne judges of these courts and the judges of the two territorial courts receive salaries of \$35,000 per annum. Where judicial offices are created for supernumerary judges, the incumbents will receive \$35,000 per annum. Supernumerary judges are those judges of a superior court of a province who have given up their regular judicial duties to hold themselves available to perform such special judicial duties as may be assigned to them from time to time by the Chief Justice or Associate Chief Justice of the Court of which they are a member. The chief judges of county and district courts receive salaries of \$27,000 per annum and the remaining judges and junior judges of all county and district courts receive salaries of \$25,000 per annum.

Every judge who is in receipt of a salary under the Judges Act is paid an additional salary of \$3,000 per annum as compensation for any extra-judicial services that he may be called upon to perform by the Government of Canada or the government of a province, and for the incidental expenditures that the fit and proper execution of his office as judge may require. In the case of each judge of the Federal Court of Canada and of the territorial courts of the Yukon Territory and the Northwest Territories an additional allowance of \$2,000 per annum is paid as compensation for special incidental expenditures inherent in the exercise of his office as judge.

*Travelling Allowances.*—The Judges Act provides that a judge of superior or county court who, for the purpose of performing any function or duty as such judge, attends at any place other than that at which or in the immediate vicinity of which he is by law obliged to reside is entitled to be paid, as a travelling allowance, his moving or transportation expenses and reasonable travelling and other expenses incurred by him in so attending. If a judge uses his personal automobile because of the lack of good public transportation facilities, he is paid a mileage allowance.

*Annuities.*—Judges' annuities are non-contributory and the statutory retirement age is 75 years except for judges of the Federal Court of Canada who cease to hold office at the age of 70 years and judges of the county courts who are compulsorily retired at the age of 70 years. Those judges of the county courts who held office at the time the retirement age was reduced to the age of 70 years (1971) are not affected by the earlier retirement age but are allowed to serve as judges until they reach 75 years of age, the retirement age in force previously. The Governor in Council may grant an annuity to: (1) a judge who has continued in judicial office for at least 15 years and has attained the age of 65 years, if he resigns his office; (2) a judge who has continued in judicial office for at least 15 years, if he resigns his office and in the opinion of the Governor in Council the resignation is conducive to the better administration of justice or is in the national interest; (3) a judge who has become afflicted with some permanent infirmity disabling him from the due execution of his office, if he resigns his office or by reason of such infirmity, is removed from office; or (4) a judge who ceases to hold office by reason of his having attained the age of retirement, if he has held judicial office for at least 10 years. The amount of the annuity may not exceed

two thirds of the salary annexed to the office held by the judge at the time of his resignation, removal or ceasing to hold office, as the case may be. An annuity granted to a judge commences on the day of his resignation, removal or ceasing to hold office and continues during his natural life.

The Governor in Council may grant to the widow of a judge who dies while in office an annuity not exceeding two ninths of the salary of the judge at the date of his death, to commence immediately after the death of the judge and to continue thenceforth during her natural life. The Governor in Council may also grant to each of a maximum of four dependent children of a judge, who dies while holding office or of a judge who is in receipt of an annuity under the Judges Act, an annuity equal to one fifth of the annuity payable to his widow, or if the judge dies without leaving a widow or such widow is dead, two fifths of the annuity that would have been payable to the judge's widow. Where a judge who was granted an annuity upon his retirement dies, the Governor in Council may grant to the widow an annuity not exceeding one third of the annuity that was granted to him. Two ninths of salary and one third of annuity are the same amount in dollars. An annuity granted to the widow of a judge ceases upon her remarriage. No annuity may be granted if the widow married the judge after he ceased to hold office.

## Section 2.—Provincial and Territorial Governments\*

In each of the provinces, The Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 80 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly. The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, although wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment in enforcing any law of the province relating to any of the foregoing subjects; generally all matters of a merely local or private nature in the province.

\* Except where indicated, the information given in this Section is brought up to June 30, 1971. Any important changes occurring between that date (or the date given) and the time of going to press will be found in Appendix I to this volume.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

**Provincial Franchise.**—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at a specified age (18 to 21 years) who is a Canadian citizen or (in certain provinces) other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. Voting privileges are given to persons in Prince Edward Island, Quebec, Ontario, Manitoba, Saskatchewan and Alberta at the age of 18, in Newfoundland, Nova Scotia and British Columbia at 19 years and in New Brunswick at 21 years.

### Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Oct. 28, 1971 is the 35th in the history of Newfoundland and the 7th since Confederation. Lieutenant-Governors from the date of Confederation, Mar. 31, 1949, to 1968 are cited in the 1969 Year Book, p. 80; since Apr. 2, 1969, the position has been held by the Hon. E. John A. Harnum. The first Ministry was formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood.

The Premier receives a salary of \$12,000 and the other Cabinet Ministers \$11,000 per annum, plus a sessional indemnity of \$6,666.67 and a travelling and expense allowance of \$3,333.33. Each member of the House of Assembly receives a sessional indemnity of \$6,666.67 plus a travelling and expense allowance of \$3,333.33. The Leader of the Opposition receives an additional allowance of \$11,000.

The reader is referred to Appendix I for Table 15 showing the party standing following the General Election of Oct. 28, 1971, and the new Ministry. Results of that election had not been finalized at the time of going to press with this Chapter.

### Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105; since that date, the position has been held by the Hon. F. W. Hyndman, appointed effective Mar. 31, 1958, followed by the Hon. W. J. MacDonald, appointed effective Aug. 1, 1963, and the Hon. J. George MacKay, appointed effective Oct. 6, 1969.

The Legislative Assembly elected May 11, 1970 is the 52nd in the history of Prince Edward Island Legislatures and the 27th since Confederation. It has 32 members from 16 electoral districts who may serve for a statutory term of five years. Each district elects one Councillor and one Assemblyman. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105. The Hon. Walter R. Shaw was Premier from Sept. 16, 1959 until the present Premier took office following the General Election of May 30, 1966.

The annual salary of the Premier is \$9,000, of a Cabinet Minister \$6,000 and of a Minister without Portfolio \$3,600. A member of the Assembly receives \$2,666.67 for each regular session attended by him and an additional amount of \$1,333.33, tax-free, for travelling and other expenses incurred in connection with session attendance and representing his district; the Speaker of the Assembly receives a further additional sum of \$1,000 and an additional amount of \$500, tax-free, for travelling and other expenses incurred in connection with his official duties for each session; to cover like expenditures, the Deputy Speaker receives a further additional sum of \$600 and an additional amount of \$300, tax-free, and the Leader of the Opposition a further additional sum of \$1,666.67 and an additional amount of \$833.33, tax-free. Payment for indemnity for travelling and other expenses incurred by a member of the Legislature, the Speaker, the Deputy Speaker and the Leader of the Opposition accrue from his election to the Legislature and are paid monthly. No sessional indemnity or expenses are paid for any special session of the Legislature.

#### 16.—Legislatures of Prince Edward Island, 1955-71, as at June 30, 1971

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75; for 1924-35 in the 1938 edition, p. 110; and for 1936-47 in the 1963-64 edition, p. 82.

### Subsection 3.—Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106; since that date the position has been held by Maj.-Gen. the Hon. E. C. Plow, commissioned to office Sept. 1, 1958, followed by the Hon. H. P. MacKeen, commissioned to office Mar. 1, 1963, and the Hon. Victor deB. Oland, commissioned to office July 22, 1968.

The Legislature has 46 members elected for a maximum term of five years. The Legislature elected Oct. 13, 1970 is the 50th in Nova Scotia's history and the 27th since Confederation. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 107; the Hon. R. L. Stanfield, Premier at that time, was followed by the Hon. George I. Smith who assumed office Sept. 13, 1967, and the Hon. Gerald A. Regan on Oct. 28, 1970.

The Premier of the province receives a salary of \$18,500 per annum and each Cabinet Minister a salary of \$16,500 per annum. Each member of the House of Assembly receives a sessional indemnity of \$5,000 and an allowance of \$2,500 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$16,500 in addition to his sessional indemnity.

### 18.—Legislatures of Nova Scotia, 1955-71, as at June 30, 1971

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76; for 1924-33 in the 1938 edition, p. 111; and for 1933-49 in the 1963-64 edition, p. 83.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution

### Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors since Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 108; since that date, the position has been held by the Hon. J. Leonard O'Brien, appointed June 6, 1958, followed by the Hon. John B. McNair, appointed June 9, 1965, and the Hon. W. S. Bird, appointed Feb. 1, 1968.

The Legislature elected Oct. 26, 1970 is the 47th in New Brunswick's history and the 20th since Confederation. It has 58 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108; the Hon. Louis J. Robichaud assumed office on July 12, 1960 and the Hon. Richard Hatfield on Nov. 12, 1970.

The Premier receives \$20,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$12,000 and the amount paid as indemnity to each member of the House of Assembly is \$5,000 plus an additional \$2,500 allowance for expenses. The Leader of the Opposition receives an additional \$8,000 and the Speaker receives an allowance of \$1,000 in addition to the regular indemnity.

### 20.—Legislatures of New Brunswick, 1955-71, as at June 30, 1971

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77; for 1924-35 in the 1938 edition, p. 112; and for 1936-48 in the 1963-64 edition, p. 84.

### Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a National Assembly. The Legislative Council—the upper chamber of the Quebec Government for 101 years—was abolished by Act of the Quebec Legislature on Nov. 29, 1968, effective Dec. 31, 1968, and by the same Act the name of the Legislative Assembly was changed to “National Assembly of Quebec”.

Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109; since that date the position has been held by the Hon. Onésime Gagnon, commissioned to office Feb. 14, 1958, followed by the Hon. Paul Comtois, commissioned to office Oct. 6, 1961, and the Hon. Hugues Lapointe, commissioned to office Feb. 22, 1966.

The National Assembly has 108 members elected for a maximum period of five years. Prime Ministers of Quebec from Confederation to 1959 are listed in the 1960 Year Book, p. 110; Mr. Jean Lesage became Prime Minister in 1960, Mr. Daniel Johnson in 1966, Mr. Jean-Jacques Bertrand in 1968 and Mr. Robert Bourassa on Apr. 29, 1970.

### 22.—Legislatures of Quebec, 1955-71, as at June 30, 1971

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78; for 1924-35 in the 1938 edition, p. 113; and for 1936-48 in the 1963-64 edition, p. 85.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
July 16, 1952	24th.....	4	Nov. 12, 1952	Apr. 25, 1956
June 20, 1956	25th.....	4	Nov. 14, 1956	Apr. 27, 1960
June 22, 1960	26th.....	3	Sept. 20, 1960.	Sept. 19, 1962

June 5, 1966	28th.....	5	Dec. 1, 1966	Mar. 12, 1970
Apr. 29, 1970	29th.....	1	June 9, 1970	1

<sup>1</sup> Life of the Legislature not expired at June 30, 1971.

Each member of the National Assembly receives a sessional indemnity of \$12,000 and an expense allowance of \$6,000. In addition to this indemnity and allowance, the Prime Minister receives an annual salary of \$16,000, a representation allowance of \$4,000 and a housing allowance of \$2,000; members of the Cabinet receive an annual allowance of \$12,000 and a supplement of \$3,000 in the form of representation allowance. Ministers without Portfolio receive an annual indemnity of \$8,000 with a representation allowance of \$3,000. The Chief Whips and Parliamentary Assistants receive an annual indemnity of \$3,000 and a representation allowance of \$1,000. The Speaker of the National Assembly receives an indemnity of \$10,000, a representation allowance of \$2,000 and a housing allowance of \$1,000; the Deputy Speaker receives an indemnity of \$5,000 and a representation allowance of \$1,000. The Leader of the Opposition receives an indemnity of \$10,000, a representation allowance of \$3,000 and a housing allowance of \$2,000.

Members of the National Assembly, with the exception of Ministers, are entitled to a supplementary allowance of \$200 a month for the maintenance of an office where they may receive their constituents and fulfil other responsibilities. In addition, legislation was passed on July 17, 1970 providing for an indemnity of \$3,000 and an allowance of \$1,000 a year to be paid to members who head an opposition party that has at least 12 members sitting in the National Assembly or has obtained 20 p.c. of the votes in the whole of the Province of Quebec at the latest general election.

**23.—Twenty-sixth Ministry of Quebec, as at Nov. 26, 1971**

**Subsection 6.—Ontario**

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112; since that date the position has been held by the Hon. Justice John Keiller Mackay, appointed effective Dec. 30, 1957, followed by the Hon. William Earl Rowe, appointed effective May 1, 1963, and the Hon. W. Ross Macdonald, appointed effective July 4, 1968.

The House of Assembly, the single-chamber Legislature of the province, is composed of 117 members elected for a statutory term of five years. Prime Ministers from Confederation to 1959 are listed in the 1960 Year Book, p. 112; the Hon. John Parmenter Roberts became Ontario's Prime Minister on Nov. 8, 1961 upon the resignation of the Hon. Leslie M. Frost, Prime Minister from May 4, 1949; the Hon. William Grenville Davis became Prime Minister on Mar. 1, 1971, upon the resignation of Mr. Roberts.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission are in operation.

**24.—Legislatures of Ontario, 1955-71, as at Oct. 21, 1971**

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79; for 1924-34 in the 1938 edition, p. 114; and for 1935-50 in the 1963-64 edition, p. 87.

<sup>1</sup> 29th Legislature not yet in session on Oct. 21, 1971.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208 as amended) each member of the Assembly is paid an annual indemnity of \$12,000 and an allowance for expenses at the rate of \$6,000. In addition, the Speaker receives a special indemnity at the annual rate of \$5,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$4,000; and the Leader of the Opposition a salary of \$15,000 per annum in addition to his indemnity as a member. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Prime Minister is \$20,000 and for a Cabinet Minister having charge of a department \$15,000. By the 1956 amendment, Ministers of the Crown who are in charge of departments, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receive a representation allowance of \$2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives \$5,000 salary and \$1,000 representation allowance per annum.

The reader is referred to Appendix I for Table 25 showing the party standing following the General Election of Oct. 21, 1971, and the new Ministry. Results of that election had not been finalized at the time of going to press with this Chapter.

**Subsection 7.—Manitoba**

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 14 members and a Legislative Assembly of 57 members elected for a statutory term of five years. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113; since that date, the position has been held by the Hon. Errick F. Willis, sworn in on Jan. 15, 1960, followed by the Hon. Richard S. Bowles, sworn in on Sept. 1, 1965 and the Hon. William John McKeag, appointed July 3, 1970. Premiers since Confederation are listed in the 1960 Year Book, p. 114; the Hon. Dufferin Roblin, who became Premier on June 30, 1958 and remained in office until Nov. 27, 1967, was succeeded by the Hon. Walter Weir who remained in office until July 15, 1969, when the present Premier assumed office.

The Premier of the province is paid a salary of \$16,600 per annum and each of the other members of the Cabinet \$15,600. Members of the Legislature are each paid a sessional indemnity of \$4,800 and a tax-free expense allowance of \$2,400 plus an allowance of \$20 a day for a period of 60 days continuous sitting including Saturdays and Sundays for members outside Metro Winnipeg who have to take board and lodging in Winnipeg during legislative sessions. The Leader of the Opposition is paid \$15,600 and the Speaker of the Legislature receives \$9,600, which is an amount equal to double the indemnity of an individual member.

**26.—Legislatures of Manitoba, 1955-71, as at June 30, 1971**

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80; for 1924-36 in the 1938 edition, p. 115; and for 1937-49 in the 1963-64 edition, p. 88.

**Subsection 8.—Saskatchewan**

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115; since that date the office has been held by the Hon. F. L. Bastedo, commissioned to office Jan. 27, 1958, the Hon. Robert L. Hanbidge, commissioned to office Mar. 1, 1963, and the Hon. Stephen Worobetz, commissioned to office Feb. 3, 1970.

The statutory number of members of the Legislative Assembly is 59, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115; the Hon. W. S. Lloyd became Premier in 1961, the Hon. W. Ross Thatcher in 1964 and the Hon. A. E. Blakeney on June 30, 1971.

The Premier receives \$18,500 and each Cabinet Minister \$13,500 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$13,500 plus an office allowance of \$17,500 per annum, the Speaker \$4,500 and the Deputy Speaker \$2,500. The

sessional indemnity of a member of the Legislature is \$6,000 together with an expense allowance of \$3,000. Each of the members for the three northernmost constituencies of Prince Albert East-Cumberland, Athabasca and Meadow Lake receives a \$6,000 sessional indemnity and a \$3,500 expense allowance.

### Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are listed in the 1960 Year Book, p. 116; since that date the office has been held by the Hon. J. Percy Page, commissioned to office Dec. 19, 1959, followed by the Hon. J. W. Grant MacEwan, commissioned in January 1966.

There are 75 members in the Legislative Assembly, elected for a maximum period of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 117; the Hon. Ernest C. Manning, the Premier at that time, resigned in 1968. The Hon. Harry E. Strom became Premier on Dec. 12, 1968, and the Hon. Peter Lougheed on Sept. 10, 1971.

Each member of the Legislative Assembly (except the Speaker, the Deputy Speaker and the Leader of the Opposition) receives a sessional indemnity of \$4,800 plus \$2,400 expense allowance plus \$15 for each day during the session when the member is necessarily absent from his ordinary place of residence, both tax-free. The Speaker's sessional indemnity is \$8,000 plus \$1,000 expense allowance, the Deputy Speaker's sessional indemnity

is \$6,400 plus \$3,200 expense allowance, and the Leader of the Opposition's sessional indemnity is \$7,200 plus \$3,600 expense allowance. Each also receives \$15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives \$18,000 and each of the other Ministers receives \$15,000.

### Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118; since that date the position has been held by Maj. Gen. the Hon. George Randolph Pearkes, commissioned to office Oct. 12, 1960, followed by Col. the Hon. J. R. Nicholson, commissioned to office on July 2, 1968.

The Legislative Assembly, elected for a statutory term of five years, has 55 members. Premiers from Confederation to 1959 are cited in the 1960 Year Book, p. 118; the present Premier assumed office in 1952.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$5,000 and \$2,500 for expenses. There is also paid to each member

a living allowance of \$2,000 (based on a per diem rate of \$50, not exceeding 40 days) and each member receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of \$500 for telegraph and telephone expenses. In addition, the Premier receives a salary of \$23,000, each member of the Executive Council with a portfolio receives \$20,000 annually and each member of the Executive Council without portfolio receives \$6,500. The Leader of the Opposition receives a special allowance of \$9,000 for expenses, the Speaker receives a special allowance of \$9,000 and the Deputy Speaker a special allowance of \$3,500.

### Subsection 11.—Yukon Territory and Northwest Territories

#### Yukon Territory\*

The Yukon was established as a separate territory in 1898 to meet a need for local government created by the influx of miners during the gold-rush period. The Yukon Territory Act provided for a Commissioner and a Council of not more than six, all appointed by the Governor in Council. The Commissioner in Council was given legislative powers comparable to those held by the Lieutenant-Governor and the Legislative Assembly of the Northwest Territories. By 1902, five elected councillors had been added and in 1908 a fully elected Council of ten members was introduced. A population decline following the end of the gold rush was accelerated by enlistment during World War I and in 1919 the Council was reduced to three elected members. This remained the level of government until after World War II when population and economic activity again showed an increase, beginning with the building of the Alaska Highway. In 1960, the Council was increased to seven elected members and provision was made for the appointment of an Advisory Committee on Finance.

**Basic Legislation.**—A principal feature of territorial government is its very close constitutional and working relationship with the Government of Canada. Although the provinces and the Federal Government each has jurisdiction and powers allocated by the British North America Act, the authority of the Territorial Government is allocated only by federal legislation. The Yukon Act prescribes the structure of the executive, legislative and judicial branches of the Territorial Government and the scope of their authority; all residual matters remain under federal control. The Territory has fully representative but not responsible government. Under authority of the Act, Whitehorse, the single large community in the Territory, was designated as the seat of government in 1953.

The Government Organization Act, 1966, which describes the responsibilities of the Department of Indian Affairs and Northern Development for the development of Northern Canada, is the other piece of basic legislation under which the Territorial Government operates. The Minister is responsible for the management of the natural resources (except game) and for the development of the North generally. Although he shares authority with the Governor in Council for directing the Commissioner in his duties, he is the effective link between the Territorial and Federal Governments.

**The Executive.**—The executive side of the Territorial Government is headed by a Commissioner appointed by the Federal Government. He is directed to administer the Government of the Territory under instruction from the Governor in Council or the Minister of Indian Affairs and Northern Development. In practice, the Commissioner is much more responsive to the wishes of his elected Council than the Yukon Act implies and he cannot spend any territorial funds which have not been voted by Council. There is also a growing body of other territorial legislation (Ordinances) on which the Commissioner is required to obtain Council approval for specific actions; actually, he never acts on any major issue without consulting Council.

Because the Commissioner does not sit with Council, an amendment was made to the Yukon Act in 1960 to bridge the gap between the executive and legislative functions of government at Council Sessions. This amendment provided for the formation of an Advisory Committee on Finance to be composed of three members of Council appointed by the Commissioner on the advice of Council. Another step to bring the executive and legislative functions of government in closer harmony was the formation in November 1970 of an Executive Committee consisting of the Commissioner as Chairman and four members, the Assistant Commissioner (Executive) and Administrator of the Yukon Territory as Vice-Chairman, the Assistant Commissioner (Administrative) and two members of Council to

\* Revised under the direction of the Commissioner of the Yukon Territory, Whitehorse.

be appointed by the Commissioner upon the recommendation of the Territorial Council. The Executive Committee was duly sworn in and took office in December 1970. The two Council members on the Executive Committee are also members of the Advisory Committee on Finance, leaving the third member to be appointed by Council. As part of their administrative duties, one elected member has been given responsibility for the Department of Education and the other for the Department of Health, Welfare and Rehabilitation.

Below the Commissioner's office, the Territorial Public Service is organized into ten conventional administrative departments under the direction of the Commissioner; all are located in Whitehorse. Territorial Government administration is represented in outlying communities by a limited number of territorial agents who are concerned mainly with the sale of liquor and licences but most territorial services are administered from Whitehorse. Health facilities are administered mainly by the federal Department of Health and Welfare. Federal involvement in the operation of health services in the Territory stems from its responsibility for Indians and from practical administrative considerations. All schools are under the direction of the Territorial Department of Education with headquarters in Whitehorse. The Territorial Government has well-developed engineering and welfare services. The Territorial Public Service numbers about 1,000 persons, including some 265 school teachers and vocational school instructors.

Some administrative areas such as natural resources, which are the responsibility of the Department of Indian Affairs and Northern Development, are administered by federal public servants. The Commissioner, in addition to his territorial role, is also the Department's senior federal representative in the Territory. The Minister of Justice is the Attorney General of the Territory for purposes of the Criminal Code of Canada, with responsibility for the administration of criminal justice in the Territory but not for civil matters or the constitution or organization of the courts. Law enforcement is provided by the Royal Canadian Mounted Police and the contract for its services is negotiated by the Territorial Government.

**The Court System.**—On Apr. 1, 1971, amendments to the Yukon Act were promulgated into force simultaneously with certain Ordinances of the Yukon Territory allowing the Yukon Territorial Government to assume the administration of justice. Ordinances coming into force that day provided for a Territorial Court, a Magistrate's Court, justices of the peace and a court of appeal. The Territorial Court consists of a single judge of superior court rank and of the Magistrate's Court (one magistrate). Both are located in Whitehorse, although from time to time Magistrate's Court sittings are held in other communities. There are 32 justices of the peace, appointed by the Commissioner, located at 15 points in the Territory. The Judge of the Territorial Court of the Northwest Territories is ex officio Judge in the Yukon Territory and vice versa. The Court of Appeal consists of the Chief Justices of British Columbia, the Justices of Appeal of British Columbia and the Judge of the Territorial Court of the Northwest Territories.

**The Legislature.**—The Legislative Council consists of seven members elected for a term of four years. Three of the members represent electoral districts located in or close to Whitehorse where about half of the some 20,000 residents of the Territory live. As in many other matters, a federal agency (Chief Electoral Officer) conducts the territorial elections as a free service to the Territory. Council normally meets in session twice each year. The first session commences in January and has as a major part of its work the voting of the main territorial estimates which have been prepared by the Commissioner and agreed to by its Advisory Committee on Finance and the Minister. The second session is usually called in November and special sessions can be held at any time. Main sessions last from

one to two months and the debates are recorded verbatim and published under the title of Votes and Proceedings. The Commissioner calls Council into session and prorogues it; he sits with it only by invitation to explain or defend a proposed expenditure, draft legislation or policy papers which he has placed before Council. All sessions are presided over by a Speaker who is appointed by Council from among its members for the duration of each Council but is given no specific responsibilities or authority under the Yukon Act. In practice, he conducts Council proceedings under Rules of Council which are an adaptation of Canadian parliamentary procedures. A Clerk of Council controls the administrative side of its proceedings.

The matters on which Council can legislate are not significantly fewer than those enjoyed by the provinces. The main exceptions concern natural resources. These are a responsibility of the Federal Government which has to provide the heavy investments in transportation and other facilities needed to bring them into production. Most major policy matters are first placed before Council in the form of a Sessional Paper prepared by the Commissioner, and the draft legislation is then presented at the next session in the form of a Bill, although amendments to existing legislation may be processed concurrently with the Sessional Paper or without the assistance of this background information. Discussion is conducted usually with the Council resolved into Committee of the Whole when the Commissioner, heads of departments and outside specialists appear to give detailed information and advice on the subject concerned. Bills are given three readings and require the assent of the Commissioner before they become law as Ordinances of the Territory. The Commissioner can reserve assent to legislation but rarely does so. As with provincial legislation, the Federal Government may disallow any Ordinance but within a period of one year. New Ordinances are published after each session; Consolidated Ordinances of the Yukon Territory are usually revised every ten years.

**The Role of the Federal Government.**—Direct federal involvement in the affairs of the Territorial Government extends from control of its constitution to responsibility for the operation of certain provincial-type services and for providing most of its finances. The constitutional arrangement has been described above, as have such federally operated provincial-type services as justice and law enforcement and the health services. Beyond these special services, the Federal Government provides the usual range of national services such as the operation of Canadian Broadcasting Corporation radio stations, mail delivery and mainline airports. Full assistance under all national welfare programs is available in the Territory. Even with special financial assistance in many particular areas, the low volume of local revenues falls far short of meeting the high cost of services provided by the Territorial Government. The Federal Government picks up this financial deficit through annual fiscal arrangements known as Federal-Territorial Financial Agreements. The amount of federal financial assistance given to the Territorial Government is simply the difference between the forecast of revenues available to the Territorial Government and the forecast of the cost of a reasonable level of services to be provided by that Government. In the process, the Territorial Government forgoes its authority to tax private and corporate incomes and to collect other corporation taxes and succession duties.

Setting aside special accounts such as housing loans and amortization of borrowings from the Federal Government for which individual arrangements are made, the Yukon Government in the year ended Mar. 31, 1971 spent \$16,098,612 on operational account and another \$7,265,414 on capital account. Of the total expenditure, the Territorial Government raised \$5,534,183 locally and recovered another \$5,299,666 from the Federal Government via shared-cost programs. The remainder was provided by the Federal Government under its financial agreement with the Territory.

## COMMISSIONER, COUNCIL AND COUNCIL STAFF OF THE YUKON TERRITORY

(As at June 30, 1971; Members of the Council were elected Sept. 8, 1970)

<b>Commissioner</b> .....	J. SMITH
<b>Executive Committee—</b>	
Chairman.....	J. SMITH
Vice-Chairman and Member.....	R. A. HODGKINSON
Member.....	G. K. FLEMING
Member.....	HILDA WATSON
Member.....	NORMAN S. CHAMBERLIST
<b>Members of the Council—</b>	
Carmacks-Kluane.....	HILDA WATSON
Dawson.....	MIKE STUTTER
Watson Lake.....	DONALD E. TAYLOR
Mayo.....	RONALD A. RIVETT
Whitehorse East.....	NORMAN S. CHAMBERLIST
Whitehorse North.....	CLIVE TANNER
Whitehorse South.....	JOHN KENNETH MCKINNON
<b>Officers of the Council—</b>	
Clerk of the Council.....	C. W. PEARSON
Legal Adviser.....	P. O'DONOGHUE

**Northwest Territories\***

The Temporary Government Act of 1869 was the first legislation by the Federal Government to establish government in the newly acquired Rupert's Land and North-Western Territory. However, functional territorial government really dates from the North-West Territories Act of 1875. The creation of the Provinces of Saskatchewan and Alberta in 1905 and the adjustment of the northern boundaries of the Provinces of Manitoba, Ontario and Quebec by 1912 pushed the Territories north of the 60th parallel. The 1905 legislation provided for a federally appointed Commissioner with wide executive and legislative powers and a Council of four but no Councillors were appointed for 16 years. In 1921 the Council was expanded to six members and, until 1946 when the first territorial resident was appointed, it was comprised entirely of senior federal officials.

Defence early warning systems, radio and greatly improved air transportation after World War II ended the extreme isolation of the North and pressures for improved territorial government soon followed. Legislative changes in 1951 and 1952 increased Council membership to eight, three of them elected from the Mackenzie District. A fourth was added in 1954. At least two Council sessions were required to be held in a year; one in the Territories and all others at the seat of government in Ottawa. The subjects on which the Commissioner in Council could legislate were increased to approximate those of the provincial legislatures except that natural resources (other than game) were reserved to the Federal Government. A Territorial Court was established.

**Recent Constitutional Developments.**—The quickening of federal interest in the North in the 1950s and 1960s stimulated concern and effort to arrange for a resident territorial government and to chart the course of its future development. An amendment to the Northwest Territories Act in 1966 created three new electoral districts in the Eastern Arctic and, for the first time, gave elected representation to all residents of the Territories. Also, at the ensuing election the first Eskimo was elected to the Territorial Council. A separate consolidated revenue fund was set up for the Territorial Government and wider powers in other areas of financial administration were introduced.

Meanwhile, in 1965, the Federal Government had appointed an Advisory Commission on the Development of Government in the Northwest Territories which travelled widely

\* Revised by the Commissioner of the Northwest Territories, Yellowknife.

in the North to examine into the local needs for change. Following receipt of its recommendations in 1966, the Federal Government acted quickly to provide for a territorial administration resident in the Territories. Yellowknife was designated as the seat of territorial government. In June 1970, the Federal Government passed amendments to the Northwest Territories Act which increased the number of elected Council members from seven to 10 and decreased the number of appointed members from five to four. The amendments also extended the life of Council from three to four years; permitted Council to set its own indemnities and to establish the voting age in territorial elections, and reduced the period of federal disallowance of Territorial Ordinances from two years to one.

**Changes in Territorial Administration.**—Unlike the Yukon Territory which has had its own public service since the turn of the century, the Government of the Northwest Territories, until recently, has been largely dependent upon the Federal Government for staff to implement its legislation and to operate its public services. Until 1963, the Deputy Minister of Northern Affairs (now Indian Affairs and Northern Development) was Commissioner, and the Northern Administration Branch of that Department was devoted to operating most government services in the Northwest Territories with federal public servants. In that year, a full-time Commissioner was appointed and charged with building up a territorial administration located initially in Ottawa but to move into the Territories as soon as possible and in September 1967 the Commissioner and his staff of about 50 persons moved to Yellowknife and immediately assumed responsibility for the operation of the liquor system (already staffed by territorial contract employees), for the game management service, for municipal affairs and for the issuing of all licences and the collecting of taxes. Operational responsibility for other government services was transferred from federal to territorial control in the Mackenzie District on Apr. 1, 1969, and in the Eastern Arctic on Apr. 1, 1970. The Territorial Government is structured to carry out its administration through seven line and three service departments, each under the direction of a senior public servant reporting to the Executive which consists of the Commissioner, the Deputy Commissioner and the Assistant Commissioner. The field staff is organized into four regions with Regional Directors at Fort Smith, Inuvik, Frobisher Bay and Churchill.

**Present Government Structure.**—The Northwest Territories Act, 1952, as amended, provides for an executive, legislative and judicial structure. The Commissioner is the chief executive officer. He is appointed by the Federal Government and is responsible for the administration of the Territories under the direction of the Minister of Indian Affairs and Northern Development. In practice, all major policy decisions are taken on the advice of this Council. The Commissioner can spend funds only to the extent voted by Council and all new revenue measures are subject to the approval of Council. Normally, the Commissioner obtains prior federal approval of proposed legislative and budgetary measures before submitting them to Council.

The Council of the Northwest Territories consists of 10 elected and four appointed members and has a life of four years. It meets at least twice a year, usually for a period of three weeks, but more often if required. The Commissioner presides over Council in Session and the Deputy Commissioner sits as an appointed member. A Clerk of Council and a Legal Adviser provide the main administrative assistance and debates are recorded verbatim.

The Northwest Territories Act gives the Territorial Council authority to legislate in most "provincial" areas of government activity except for natural resources (other than game); these are reserved to the Federal Government which alone can provide the necessary development funds. Legislation (Ordinances) must receive three readings and have the assent of the Commissioner; he can reserve assent but this is a rare occurrence and the Federal Government may disallow any ordinance within one year. The Commissioner proposes most legislation but private members' Bills are allowed except for money

matters which are the prerogative of the Commissioner. Besides draft legislation, the Council gives considerable time to policy papers in which the Commissioner asks for advice or seeks authority to take a particular course of action.

The court system in the Territories consists of a superior court called the Territorial Court of the Northwest Territories, presided over by one judge who is located in Yellowknife. The Court of Appeal of the Territories consists of the Justices of Appeal of Alberta and the Judges of the Yukon and Northwest Territorial Courts. There are also two full-time magistrates appointed by the Commissioner who have jurisdiction similar to provincial judges and a number of justices of the peace also appointed by the Commissioner serve in widely scattered settlements in the Territories.

The Minister of Justice is the Attorney General of the Territories under the Criminal Code, with responsibility for the criminal administration of justice but not for civil matters or the constitution or organization of the courts. Law enforcement is provided by the Royal Canadian Mounted Police.

**Continuing Federal Responsibility.**—The Government Organization Act, 1966 charges the Minister of Indian Affairs and Northern Development with responsibility for the development of the North and for the general co-ordination of federal activities in the area. His responsibilities for the Territorial Government through the Northwest Territories Act have been described as has the operation of government services by the staff of his Department. Other Federal Government agencies, such as the Northern Health Service of the Department of National Health and Welfare and the Royal Canadian Mounted Police, are responsible for health and police services with the Territorial Government sharing their costs. The Ministry of Transport operates mainline airports throughout the whole of the North and the Canadian Broadcasting Corporation provides special shortwave northern broadcasts and maintains a growing number of local stations in the Territories. Federal cost-shared national assistance programs, within the competence of the Territorial Government, are available to it on the same conditions as to the provinces.

There are about 7,000 Indians and 12,300 Eskimos in the Northwest Territories for whom the Federal Government has a special responsibility. Although there are no Indian reserves in the Territories, two treaties were entered into which established certain claims to land and certain other rights. As in the provinces, legislative authority with respect to Indians and lands reserved for Indians is vested exclusively in the Federal Government and this authority extends to Eskimos.

Extensive financial assistance is given to the Territorial Government under special federal-territorial agreements, usually spanning a period of five years. These agreements serve both to allocate the financial responsibility of each government for the provision of services in the Territories and to fix the amount of the federal financial payments to the Territorial Government for the life of the agreement. At the present stage of development, territorial revenues fall far short of meeting the expenditures of the Territorial Government. Under the financial agreements, all taxes on personal and corporate incomes, corporation taxes and succession duties are reserved to the Federal Government.

Excluding amortization of borrowings, the Territorial Government, during the year ended Mar. 31, 1971, spent about \$58,600,000 on operating accounts and about \$13,900,000 on capital projects. Of these expenditures, approximately \$6,000,000 was raised within the Territories through taxes, licences and liquor revenues and \$13,600,000 was recovered from residents of the Territories for services supplied. A further \$3,300,000 was recovered under federal shared-cost programs. The remainder was provided by the Federal Government as special operating grants and loans under the financial agreement and under the special arrangements relating to the move to the seat of government in Yellowknife.

## COMMISSIONER, COUNCIL AND COUNCIL STAFF OF THE NORTHWEST TERRITORIES

(As at June 30, 1971; the latest General Election was held on Dec. 21, 1970)

Legal Adviser.....	F. G. SMITH

## Section 3.—Local Government\*

Local government in Canada comprises all government entities created by the provinces and territories to provide services that can be more effectively discharged through control at the local level. Broadly speaking, local government services are identified in terms of nine main functions—protection, transportation, environmental health, public health, welfare, environmental development, recreation, community services and education. In addition, local government, through the medium of government enterprises, may operate such facilities as public transit and the supply of electricity and gas. Education is normally administered separately from the other local functions (see Chapter VII).

Many local government organizations antedate Confederation but under the British North America Act local government was made a responsibility of the provincial legislatures, a responsibility subsequently extended to the territories when their governments were constituted in the present forms. The unit of local government, apart from the school board, is usually the municipality which is incorporated as a city, town, village, township or other designation depending on the province. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial or territorial legislatures. Some of these statutes apply to all municipalities within a province, some to a certain type or group, and many to one municipality only.

Rapid and continuing urbanization during the past two decades and the demand for services in rural areas comparable to those obtainable in urban areas have placed great strains on local government. These strains have been aggravated by the inelasticity of the major local revenue source—the taxation of real property; at the same time, the small populations of most municipalities have hindered attempts to provide services that require economies of scale for efficient operation.

The provinces have taken a number of steps to assist local governments to meet these challenges. An increasing number of special agencies or joint boards and commissions have been created to provide certain services for groupings of municipalities. Local government revenue has been supplemented by grants from the provinces, either made unconditionally

\* Prepared in the Governments Division, Financial Statistics Branch, Statistics Canada.

or for specific purposes. Certain functions traditionally assigned to local government have been assumed in whole or in part by the provinces. Besides encouraging the amalgamation of small units, the provinces have also established new levels of local government to provide services which can be better discharged at a regional level. "Second-tier" local governments now cover the whole of British Columbia and are planned for all of Ontario, where five now exist, and for Quebec, where three have been established. Reorganization of the only other local government of this type—the Metropolitan Corporation of Greater Winnipeg—appears likely during 1971 or 1972.

The major local revenue source available to local government is the taxation of real property, supplemented in varying degrees by taxation of personal property, business and amusement taxes, or sales taxes on specific commodities. Revenue is also derived from licences, permits, rents, concessions, franchises, fines and surplus funds from municipal enterprises.

Since a description of all forms of local government would be too complex for easy comprehension, the following paragraphs describe only municipal organization in each province and in the territories as at Jan. 1, 1971. Tables 34 and 35 give the total number of each type of municipality in each province and territory as well as numbers in each metropolitan area.

**Newfoundland.**—At Jan. 1, 1971, Newfoundland had 218 incorporated areas comprising two cities, 73 towns, five rural districts, 35 local improvement districts, 102 local government communities and one metropolitan area. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities are established under the Community Councils Act in the smaller settlements and have limited powers and functions. The St. John's Metropolitan Area, incorporated under a special Act, covers the area adjoining and surrounding the city of St. John's and the town of Mount Pearl and is similar in organization to a local improvement district. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Housing.

**Prince Edward Island.**—In this province, one city and seven towns have been incorporated under special Acts and 24 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province, although it is divided into three counties which are subdivided into school sections having elected school boards. The organized municipalities are administered by the Department of Community Services.

**Nova Scotia.**—This province is geographically divided into 18 counties; 12 of these constitute separate municipalities and the remaining six are divided into two districts or municipalities, making a total of 24 rural municipalities. Within and under the jurisdiction of these municipalities there are 25 incorporated villages that provide limited services. In addition, there are three cities operating under special charters and special legislation and 38 towns operating under the Town Incorporation Act. Although geographically located within counties or districts, cities and towns are entirely independent of them except as to joint expenditures. There is no part of the province that is not municipally organized. Supervision of municipalities is exercised through the Department of Municipal Affairs.

**New Brunswick.**—In 1967, the New Brunswick Government assumed direct responsibility for justice, health, welfare and education and fully reorganized the municipal system. The municipal organization is now comprised of six cities, 21 towns and 94 villages. The remainder of the province is not municipally organized and is administered by the provincial government. There are 160 unincorporated local service districts established

to provide services that are municipal in nature but these are administered by the Department of Municipal Affairs and are not municipal organizations. Municipalities are supervised by the Department of Municipal Affairs.

**Quebec.**—The more thickly settled areas of Quebec, comprising about one third of the area of the province, are municipally organized; the remainder is governed by the province as "territories". The organized area is divided into 74 county municipalities which look after matters of general interest within the county. Cities and towns are excluded from the county system for political and administrative purposes except for certain joint expenditures. The remaining municipal corporations and the unorganized territory within counties fall under the county system. The counties have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. The municipalities are governed by Special Charter, by the Cities and Towns Act or by the Municipal Code. On Jan. 1, 1971, there were 1,599 municipalities, divided as follows: 67 cities, 195 towns, 285 villages, 507 parishes, 157 townships, 13 united townships and 375 municipalities without designation. There have been several attempts by the province during recent years to consolidate municipalities, the most notable example being the fusion in 1965 of 14 municipalities on Île Jésus to form the city of Laval. At the beginning of 1970, the Montreal and Quebec Urban Communities and the Outaouais Regional Community were established in which integration of services will be staged gradually. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission.

**Ontario.**—Slightly more than one tenth of Ontario's area is municipally organized (which includes 95 p.c. of its total population) and the remainder is governed entirely by the provincial government. The settled section of the province is divided into one metropolitan municipality, three regional municipalities, one district municipality and 34 counties. In addition, there are 34 cities, six separated towns, five boroughs, 146 towns, 144 villages, 531 townships and 16 improvement districts. The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city and five boroughs, and is responsible for assessments, police, water supply, sewerage, metropolitan road systems, planning, etc. The regional municipalities of Ottawa-Carleton, York, and Niagara have replaced the county administrations in their respective areas and assumed certain responsibilities over all the municipalities within their boundaries. The District Municipality of Muskoka was incorporated on Jan. 1, 1971 to assume responsibilities, similar to those of the regional municipalities, over the reorganized municipalities of the former district of Muskoka. This form of regional government in Ontario is also contemplated in other areas. Each county, although an incorporated municipality, is comprised of the towns (with the exception of six separated towns), villages and townships situated within it. Some municipalities are located outside the counties in areas called districts. These districts are in the western and northern parts of Ontario and are not municipal entities. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

**Manitoba.**—Manitoba has one metropolitan municipality, 11 cities, 34 towns, 41 villages and 109 rural municipalities supervised by the Department of Urban Development and Municipal Affairs under the Municipal Act and special charters. The Metropolitan Corporation of Greater Winnipeg has been in existence since 1960 and 12 municipalities are within its boundaries. It is responsible for such services as planning, assessments, sewage disposal, water supply, etc. There are 18 local government districts incorporated under the Local Government Districts Act where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

**Saskatchewan.**—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 131 towns, 358 villages and 292 rural municipalities. The area so organized consists of most of the southern part of the province, the remainder of this portion being administered by the province through nine unincorporated local improvement districts. The northern part is sparsely populated and some municipal services are provided by the province through the operation of the Northern Administration District. Municipalities are supervised by the Department of Municipal Affairs.

**Alberta.**—This province has an Act applying to each type of municipality and, under these Acts, the Department of Municipal Affairs supervises the nine cities, 101 towns, 168 villages, 18 municipal districts and 30 counties. The counties administer schools in addition to municipal functions. There are 24 improvement districts administered directly by the Department of Municipal Affairs and three special areas under the Special Areas Board also responsible to the Department of Municipal Affairs.

**34.—Number of Municipalities in Canada classified by Type and Size, by Province, as at Jan. 1, 1971**

<sup>1</sup> Includes urban communities in Quebec; Metropolitan Toronto, regional municipalities and the district municipality in Ontario; and Greater Winnipeg in Manitoba.

<sup>2</sup> Includes the five boroughs of Metropolitan Toronto.

<sup>3</sup> Includes five rural districts.

<sup>4</sup> Includes municipalities in Nova Scotia; parishes, townships, united townships and municipalities in Quebec; townships in Ontario; rural municipalities in Manitoba and Saskatchewan; municipal districts and counties in Alberta; and districts in British Columbia.

<sup>5</sup> Includes local government communities, local improvement districts and the metropolitan area in Newfoundland; improvement districts in Ontario and Alberta; local government districts in Manitoba; local improvement districts in Saskatchewan and Yukon Territory; and hamlets in the Northwest Territories.

**British Columbia.**—In 1967, the Government of British Columbia instituted regional government in the province and by Jan. 1, 1970, 28 regional districts had been established. These regional districts are developing and are assuming responsibility for certain services from municipalities within their boundaries as well as providing services to previously unorganized areas. There are 31 cities, 14 towns, 56 villages and 39 districts. Districts are mostly rural although there are some adjacent to the principal cities of Vancouver and Victoria that are largely urban in character. Municipalities are supervised by the Department of Municipal Affairs. In addition, there are unincorporated local districts supervised by the Department of Lands, Forests, and Water Resources that have been set up to provide certain municipal services such as protection, waterworks, irrigation, etc.

**Yukon and Northwest Territories.**—In the Yukon Territory, there are two cities, one village and three local improvement districts and in the Northwest Territories, there are one city, three towns and three hamlets. The local improvement districts in the Yukon and the hamlets in the Northwest Territories, although incorporated, are developmental forms of local government. Supervision of these municipalities is provided by the Departments of Local Government of the respective Territorial Governments.

### 35.—Number of Municipalities in Metropolitan Areas, by Type, as at Jan. 1, 1971

## PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

### Section 1.—Financial Administration

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all federal taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through re-

sponsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

**Estimates and Appropriations.**—The co-ordination of the Estimates process is carried out by the Treasury Board. This Board is a separate department of government, its Minister having the designation of President of the Treasury Board. In addition to the President, the Board consists of the Minister of Finance, and four other Privy Counsellors. Under the Financial Administration Act, the Board may act for the Privy Council in all matters relating to financial management including estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the Public Service and general administrative policy in the Public Service.

Present practice calls for departments to submit forecasts of their requirements for the next fiscal year many months in advance and in two stages. In the first stage, which starts about 15 months in advance of the beginning of the new fiscal year, the departments present forecasts of what they will require in each of the coming three years to maintain the current levels of service in each program. These are termed their "A Budgets". In the second stage, beginning about three months later, departments submit forecasts of requirements for new activities or expansion in existing activities—their "B Budgets". These proposals are reviewed by the Treasury Board in the light of expenditure guidelines approved by the Cabinet, the guidelines being expressions of the government's current priorities. The Treasury Board prepares recommendations for the budgetary and non-budgetary allocations to each program for Cabinet review. In August of the year preceding the fiscal year, departments are advised of the allocations as eventually approved by Cabinet. Departments then develop their detailed estimates of resource requirements for the new year against these approved allocations. The Estimates are submitted at the end of October. Following review by the Treasury Board and approval by Cabinet, they are tabled in Parliament in February.

Main Estimates and Supplementary Estimates are referred to Committees of the House of Commons. The timing of such referrals, the timing of committee reports and all other matters having to do with the business of supply in the House of Commons are regulated by the Standing Orders of the House (October 1969). The relevant provisions are briefly summarized here. Sect. 58 of the Standing Orders establishes three supply periods ending, respectively, not later than Dec. 10, Mar. 26 and June 30. The first Supplementary Estimates for a year are usually dealt with in the Dec. 10 period and the final Supplementary Estimates in the Mar. 26 period. In addition, interim supply (consisting of 3/12ths for all items in Estimates and extra 12ths for some items) is dealt with in the Mar. 26 period. In the June 30 period, the House is asked to provide full supply. The Standing Orders call for the referral of the new year Main Estimates to standing committees of the House by Mar. 1 of the then expiring fiscal year and reports back to the House by such committees not later than May 31 in the then current fiscal year. Supplementary Estimates are referred immediately after they are tabled, usually to the Miscellaneous Estimates Committee of the House, and dates by which reports must be made to the House are stipulated. In each supply period, a number of days are allotted to the business of supply. Opposition motions have precedence over all government supply motions on allotted days and opportunities to put forward motions of non-confidence in the government are provided. On the last allotted day in each period at 15 minutes before the ordinary time of adjournment the Speaker interrupts the proceedings then in progress and puts every question necessary to dispose of any business relating to supply. No debate takes place after the Speaker has acted in this way and the Appropriation Act or Acts then before the House have to be voted upon. These Appropriation Acts call for payments out of the Consolidated Revenue Fund of the amounts included in the Estimates, whether Main or Supplementary, and subject to the conditions stated in those Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt and family allowances, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision also exists for the expenditure of public money in emergencies where no parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the President of the Treasury Board that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant must be published in the *Canada Gazette* within thirty days of issue and reported to Parliament within fifteen days of assembly. The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the Estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust accounts and annuity, insurance and pension accounts which the Government holds or administers, including the old age security fund and the Canada Pension Plan fund which are operated as separate entities. These disbursements are excluded from the calculation of the annual budgetary surplus or deficit.

**The Budget.**—Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament at least one day prior to the presentation of the Budget, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for Supplementary Estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into committee, the debate on which may take up six sitting days. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

**Revenues and Expenditures.**—The administrative procedures whereby revenues are collected and expenditures made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. (The Minister of Supply and Services is

the Receiver General of Canada.) The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund are in excess of requirements for the immediate future they may be invested in interest-earning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The Treasury Board exercises central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the annual consideration of departmental long-range plans and the Estimates, the Board has the right to maintain continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, the Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price charged is reasonable or according to contract, together with such documents as may be required, are presented to the Receiver General, who makes the payment.

At the beginning of each fiscal year, or at such other times as the Treasury Board may direct, each department, unless otherwise directed by the Board, submits a division into allotments of each vote included in its Estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, commitments coming in course of payment within the year for which Parliament has provided or has been asked to provide appropriations are recorded and controlled by the departments concerned. (The Minister of Supply and Services may perform these services on behalf of departments.) Records are maintained of commitments made under contract that will fall due in succeeding years, since the Government must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts payable prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Receiver General by cheque or other instrument in such form and authenticated in such manner as the Treasury Board may direct. In practice, such cheques or instruments are cleared daily by the chartered banks through the Bank of Canada to the Cheque Adjustment Division of the Receiver General, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

**Public Debt.**—In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

**Accounts and Financial Statements.**—Under the Financial Administration Act, and subject to regulations of the Treasury Board, the Receiver General requires accounts to be kept to show the revenues of Canada, the expenditures made under each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are shown on the statement of assets and liabilities at a nominal value of \$1.

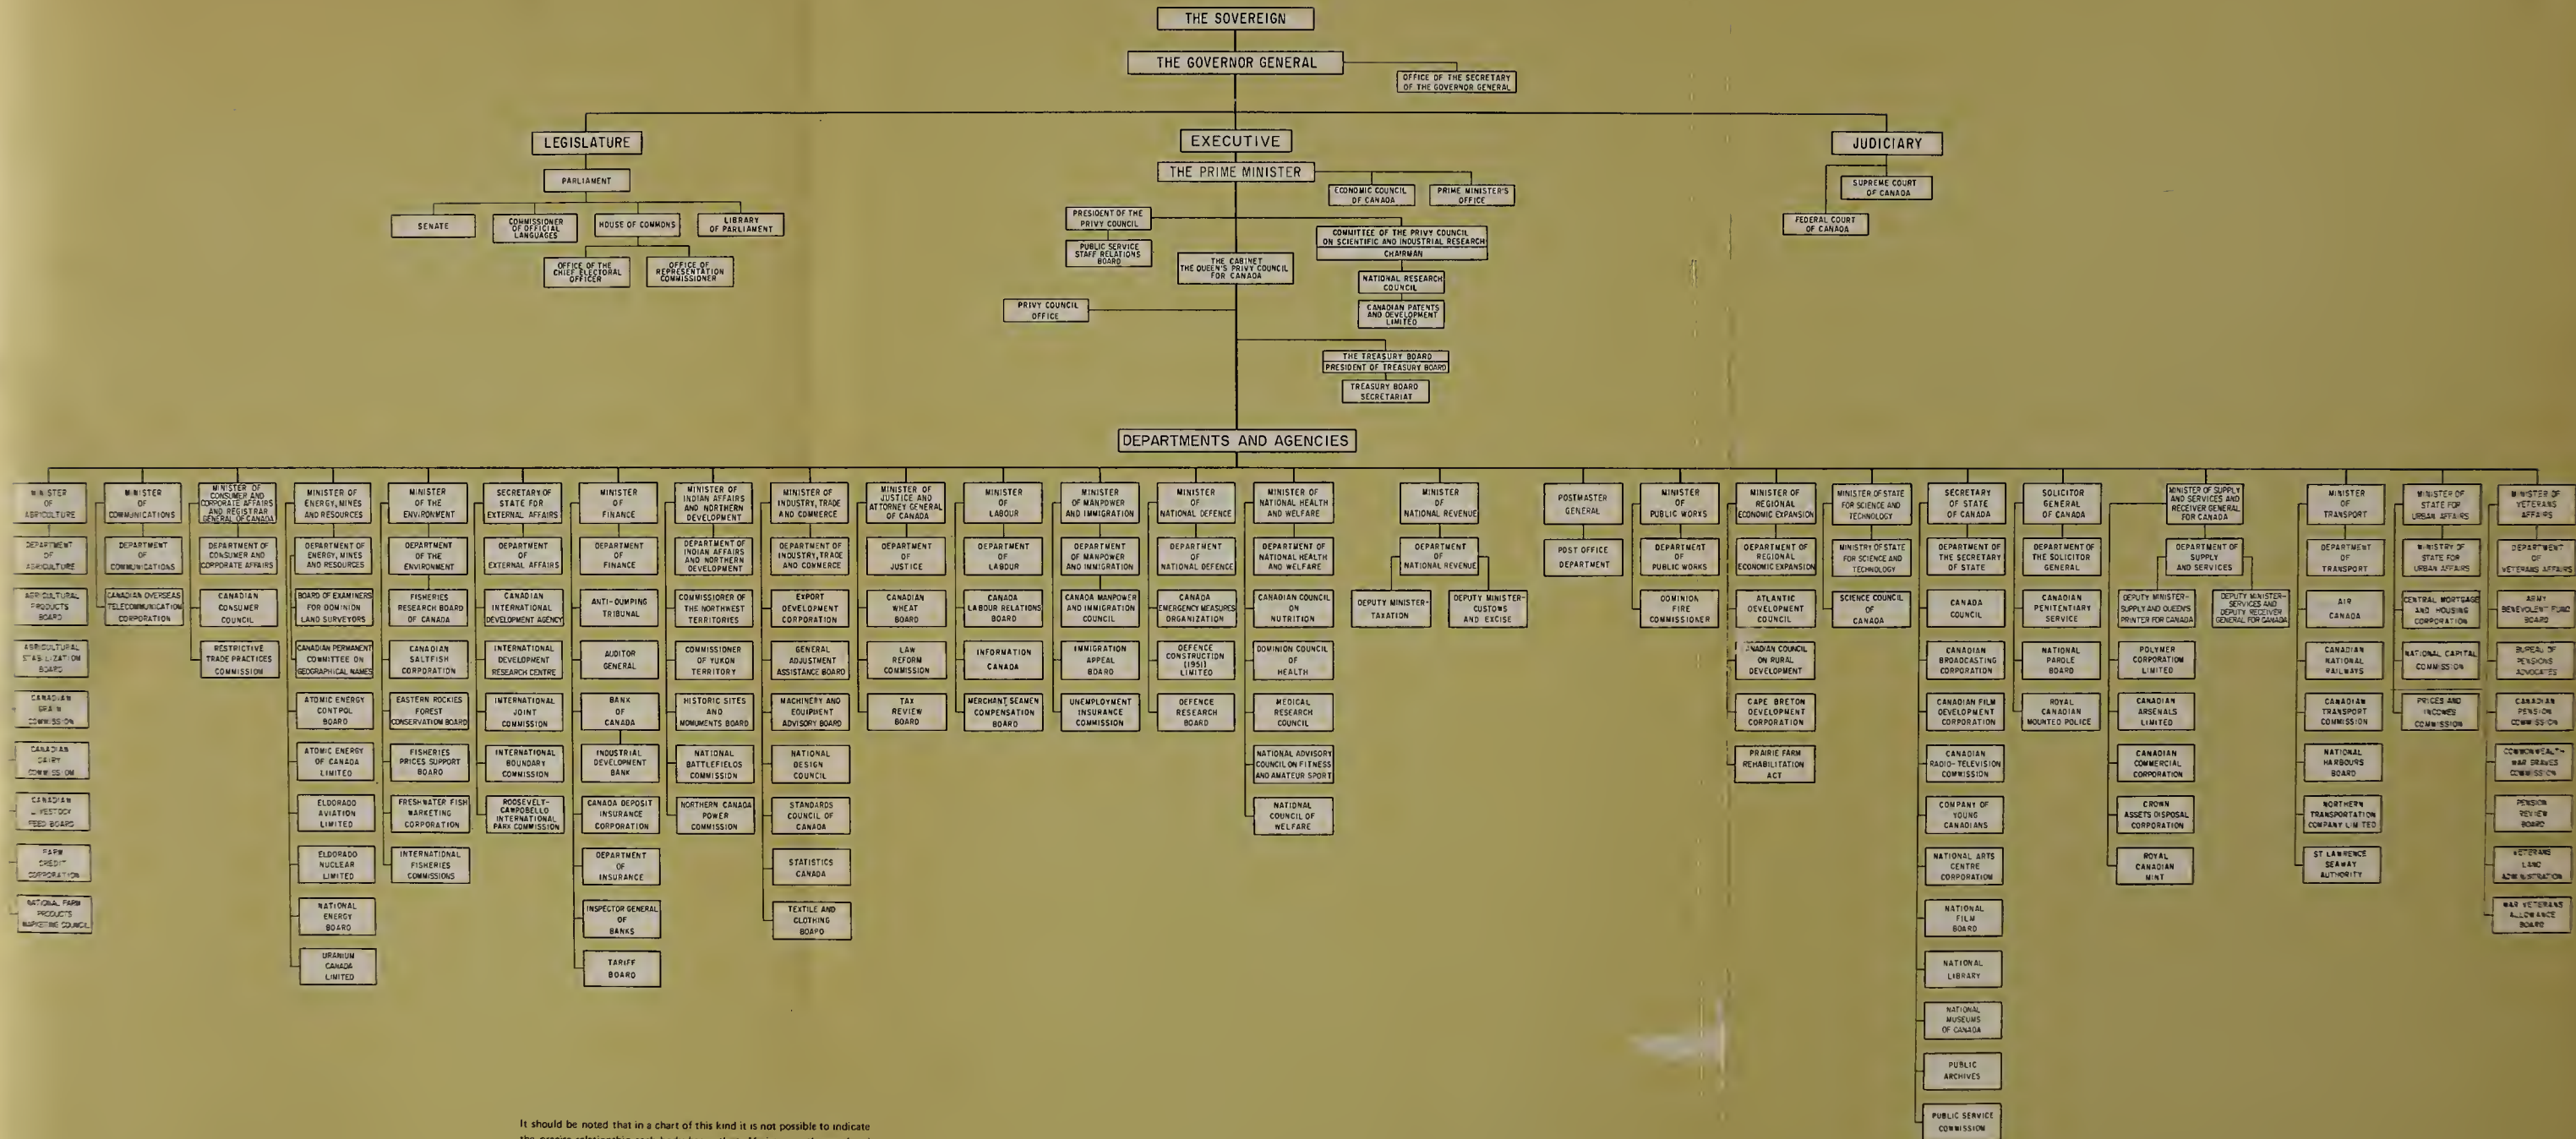

Annually, on or before Dec. 31 or, if Parliament is not then sitting, within any of the first fifteen days next thereafter that Parliament is sitting, the *Public Accounts*, prepared by the Receiver General, is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year ended the previous Mar. 31, statements of the revenues and expenditures for that year and of the assets and direct and contingent liabilities as at the end of that year, together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. Monthly financial statements are also published in the *Canada Gazette*.

**The Auditor General.**—The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the department or agency requisitioning the payment. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

**Public Accounts Committee.**—It is the usual practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons, which may review them and report the findings and recommendations to the House of Commons.

# THE GOVERNMENT OF CANADA

It should be noted that in a chart of this kind it is not possible to indicate the precise relationship each body has with its Minister on the one hand and with Parliament on the other. Nor is it possible to show the great variety of such relationships that exist.

## Section 2.—Departments, Boards, Commissions, etc.\*

This Section indicates the functions of the various departments and the special boards and commissions conducting the work of the Government. Although it is not possible, owing to limitations of space, to include the details of each service or the divisions or sections of all departments, in general the main branches are given along with services that differ in some quality from the larger class of subjects handled. The work of many of the departments and agencies is given in detail in later Chapters of this volume; the Index will be useful in locating required information.

The Public Service is under almost continual change in response to the growth in number, variety and complexity of the services required of the Government. In 1966, a major reorganization took place, partly to achieve a functional rationalization of existing activities and partly because new activities had to be undertaken. These changes, reflected in the Government Organization Act (SC 1966, c. 25), are outlined briefly in the 1967 Year Book, pp. 83-84. With the passage of the Government Organization Act of 1969 (SC 1968-69, c. 28), additional changes were effected which are outlined in the 1970-71 Year Book, pp. 137-139.

Further major reorganization measures were introduced under the Government Organization Act of 1970 (SC 1970-71, c. 42). The Department of Fisheries and Forestry became the core of a new Department of the Environment, headed by a Minister who is responsible for Canada's renewable resources and environmental quality. To assist the Minister and, at the same time, delineate his functions, former responsibilities for water on the part of the Department of Energy, Mines and Resources and for water and air pollution monitoring and control activities on the part of the Departments of National Health and Welfare and Transport were transferred to the new Department.

The 1970 Act introduced the concept of "Ministries and Ministers of State". For the purposes of meeting the rising demands on the Government and easing Ministerial burdens, two types of Ministries of State may be established by proclamation following approval by resolution of the House of Commons of the text of the proposed Order in Council authorizing the issuance of the proclamation. One type is the Minister (for example, the Minister of Science and Technology) who is charged with a particular mission, usually of a policy nature, generally of short, or not necessarily of permanent, duration. The other is the Minister who is assigned to assist any Minister or Ministers with particularly heavy responsibilities or with a specific responsibility requiring special attention.

Ministries of State are not designed to be departments. They have no significant operational responsibilities, are relatively small in size and in most instances are of a temporary nature. Their fundamental purpose is to enable the Government to assign responsibility to a Minister for the development of policy in an area where the development of such policy is urgently required, and to equip him with suitable staff resources to discharge this responsibility.

The 1970 Act brought about other significant changes. The number of Parliamentary Secretaries formerly restricted to 16 may now equal the number of Ministers who hold offices listed in Sect. 4 of the Salaries Act. Where previously the Minister of Communications was also the Postmaster General, the Act provides that the Minister of Communications would retain the portfolio unless a Minister were appointed to the office of Postmaster General by commission.

The Act also provides for improved early retirement benefits for certain categories of persons employed in the Public Service and enables former deputy heads to elect to continue to make contributions under the Public Service Superannuation Act after they cease to be actively employed in the Public Service.

\* As at or under organization at June 30, 1971. The accompanying organization chart is brought up to the latest possible date before going to press; see lower right-hand corner.

**Department of Agriculture.**—This Department was established in 1867 (SC 1868, c. 53) and now operates under authority of RSC 1970, c. A-10. It undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch and the Health of Animals Branch; the Canada Grain Act, as it pertains to the inspection, weighing, storage and transportation of grain, is administered by the Canadian Grain Commission; and farm income security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act, the Canadian Dairy Commission Act, the Agricultural Stabilization Act and the Agricultural Products Board. The Agricultural Stabilization Board, the Farm Credit Corporation, the Canadian Grain Commission, the Canadian Dairy Commission and the Canadian Livestock Feed Board report to Parliament through the Minister of Agriculture.

**Anti-dumping Tribunal.**—Under the Anti-dumping Act (RSC 1970, c. A-15, as amended by SC 1970-71, c. 3), the Anti-dumping Tribunal is declared to be a court of record and makes formal inquiry into the impact of dumping on production in Canada. Within 90 days of a preliminary determination of dumping by the Deputy Minister of National Revenue for Customs and Excise, the Tribunal must make an order or finding on the question of injury, threat of injury or material retardation to production in Canada of like goods. Decisions of the Tribunal are final and conclusive. In addition, the Tribunal shall inquire into and report to the Governor in Council on any matter or thing in relation to the importation of goods into Canada that may cause or threaten injury to the production of any goods in Canada that the Governor in Council refers to the Tribunal for inquiry and report.

The Tribunal consists of a chairman and not more than four other members. Its offices are located in Ottawa and it may conduct hearings in other centres in Canada. The Tribunal reports to Parliament through the Minister of Finance.

**Canadian Grain Commission.**—The Canada Grain Act (SC 1970-71, c. 7) came into force on Apr. 1, 1971, repealing the Canada Grain Act, 1930 (RSC 1952, c. 25) and replacing the former Board of Grain Commissioners for Canada. The new Commission reports to Parliament through the Minister of Agriculture, as did the Board, and the responsibilities are unchanged. The Commission provides general supervision over the physical handling of grain in Canada by licensing elevators and elevator operators, by inspecting, grading and weighing grain received at and shipped from terminal services, and by other services associated with regulating the grain industry. It manages and operates the six Canadian Government elevators in Western Canada.

The Commission consists of a chief commissioner and two commissioners. Its objects are, in the interests of grain producers, to establish and maintain standards of quality for Canadian grain, to ensure a dependable commodity for domestic and export markets and to regulate grain handling in Canada. It has authority to conduct investigations and hold hearings on matters coming within its purview, and to undertake, sponsor and promote research in relation to grain and grain products.

**Canadian International Development Agency.**—The operation and administration of Canada's programs of international development are the responsibility of the Canadian International Development Agency (CIDA). Originally established by Order in Council in 1960 and known until 1968 as the External Aid Office, the Agency is under the direction of a president and reports to Parliament through the Secretary of State for External Affairs.

**Canadian Penitentiary Service.**—The Penitentiary Service operates under the Penitentiary Act (RSC 1970, c. P-6) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith.

**Canadian Pension Commission.**—This Commission, established in 1933 by amendments to the Pension Act (RSC 1970, c. P-7), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pensions in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X and Part XII of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service directly related to the prosecution of World War II. It also adjudicates on claims for pension under various other measures; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants. The Commission consists of eight to twelve commissioners and up to five *ad hoc* commissioners appointed by the Governor in Council. Its chairman has the rank of a Deputy Minister and it reports to Parliament through the Minister of Veterans Affairs.

**Canadian Radio-Television Commission.**—This Commission, established under the provisions of the Broadcasting Act, 1967-68 (RSC 1970, c. B-11), is given authority to regulate and supervise all aspects of the Canadian broadcasting system. The Executive Committee, after consultation with the part-time members in attendance at a meeting of the Commission, may issue broadcasting

licences or renewal licences for such terms, not exceeding five years, and subject to such conditions related to the circumstances of the licensee as the Executive Committee deems appropriate for the implementation of the broadcasting policy enunciated in Sect. 2 of the Broadcasting Act. Under the same circumstances, the Executive Committee may, upon application by a licensee, amend any conditions of a broadcasting licence issued to him. Applications for licences to establish new broadcasting undertakings, for amendments to licences, for renewal licences, or for changes in the ownership or in the share structure of licensees are filed with the Secretary, Canadian Radio-Television Commission, Ottawa, Ont. A public hearing shall be held by the Commission in connection with the issue of a broadcasting licence, other than a licence to carry on a temporary network operation, or where the Commission or the Executive Committee has under consideration the revocation or suspension of a licence. A public hearing shall be held by the Commission, if the Executive Committee is satisfied that it would be in the public interest to hold such a hearing in connection with the amendment of a licence, the issue of a licence to carry on a temporary network operation or a complaint by a person with respect to any matter within the powers of the Commission. A public hearing shall be held by the Commission in connection with the renewal of a licence unless the Commission is satisfied that such hearing is not required.

The Commission consists of five full-time members and ten part-time members. It reports to Parliament through the Secretary of State.

**Canadian Transport Commission.**—The Canadian Transport Commission, created in 1967 by the National Transportation Act (RSC 1970, c. N-17), took over powers formerly vested in the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission, giving it regulatory and judicial functions with respect to almost all aspects of railway, commercial air and merchant marine services. The Act also provides for the regulation of extra-provincial motor vehicle transport and commodity (solids) pipelines but the applicable parts of the Act were not yet in effect as at mid-1971. The Commission is divided into five Committees for the purpose of performing its regulatory duties under the Act: the Railway Transport Committee; the Air Transport Committee; the Water Transport Committee; the Motor Vehicle Transport Committee; and the Commodity Pipeline Transport Committee.

The Canadian Transport Commission is also given the responsibility for undertaking studies and research into the economic aspects of all modes of transport within, into or from Canada. It reports to Parliament through the Minister of Transport.

**Commissioner of Official Languages.**—Appointed by Parliament pursuant to the Official Languages Act (RSC 1970, c. O-2), the Commissioner holds office for a term of seven years, renewable until retirement age. He is responsible to Parliament for ensuring recognition of the equal status of French and English as Canada's official languages and for ensuring compliance with the spirit and intent of the Act in all the institutions of the Parliament and Government of Canada. To this end, the Commissioner is empowered to receive and investigate complaints from the public, and, on his own initiative, to conduct investigations into possible violations of the Act. The results of investigations must be communicated to the complainants and the institutions concerned and may, in the Commissioner's discretion, be the subject of a special report to Parliament. The Commissioner reports annually to Parliament on the conduct of his Office and may make recommendations for changes in the Act as he deems necessary or desirable.

**Department of Communications.**—The Department of Communications was established under Part II of the Government Organization Act, 1969 and operates under authority of RSC 1970, c. C-24. The duties and powers of the Minister cover all matters over which the Parliament of Canada has jurisdiction relating to telecommunications and the development and utilization generally of communication undertakings, facilities, systems and services for Canada. They include the planning and co-ordination of telecommunication services for departments and agencies of the Government of Canada, formerly under the jurisdiction of the Department of Transport, assistance to communications systems and facilities to adjust to changing domestic and international conditions, and the securing, by international regulation or otherwise, of the rights of Canada in communications matters.

The Canadian Overseas Telecommunications Corporation reports to Parliament through the Minister of Communications. Telesat Canada, a mixed-investment satellite communications corporation, also reports to Parliament on certain matters through the Minister of Communications.

**Department of Consumer and Corporate Affairs.**—Legislation to establish this Department (RSC 1970, c. C-27) received Royal Assent on Dec. 21, 1967. This statute transformed the former Department of the Registrar General of Canada into the new Department of Consumer and Corporate Affairs. The duties, powers and functions of the Minister extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: consumer affairs; corporations and corporate securities; combines, mergers, monopolies and restraint of trade; bankruptcies and insolvencies; and patents, copyrights and trade marks.

The functions of the Department are divided into three main areas. The Bureau of Consumer Affairs co-ordinates government activities in the field of consumer affairs, the Bureau of Corporate Affairs administers the Government's corporate activities, and competition policy is regulated by the Director of Investigation and Research under the Combines Investigation Act.

In addition, as Registrar General of Canada, the Minister of Consumer and Corporate Affairs is the custodian of the Great Seal of Canada, the Privy Seal of the Governor General, the Seal of the Administrator of Canada and the Seal of the Registrar General of Canada. He is also Custodian of Enemy Property.

The Restrictive Trade Practices Commission (Combines Investigation Act) is domiciled in the Department and reports directly to the Minister.

**Department of Energy, Mines and Resources.**—The Department of Energy, Mines and Resources was created in 1966 by the Government Organization Act (RSC 1970, c. E-6). The Department, in addition to its administrative services, is organized into three groups: the Science and Technology Group includes the Geological Survey of Canada, the Mines Branch, the Surveys and Mapping Branch, the Earth Physics Branch and the Polar Continental Shelf Project, all of which are engaged in research and the provision of information in their respective fields; the Mineral Development Group includes the Mineral Resources Branch, which gathers economic data for all minerals for use of government, industry and the public and conducts administrative functions of resource management, the Explosives Division which controls, under the provisions of the Explosives Act, the production and handling of explosives, and the Quebec Regional Office; the Energy Development Group has broad responsibilities relating to the development of plans and policies for all forms of energy, the development of programs, legislation and agreements to implement those policies, the direction of studies relating to energy sources and requirements, and the co-ordination of policy advice. The Assistant Deputy Minister (Energy) serves as adviser on over-all plans and policies relating to energy sources and requirements.

Atomic Energy of Canada Limited, Eldorado Nuclear Limited, Eldorado Aviation Limited, the Atomic Energy Control Board, the National Energy Board, the International Boundary Commission and the Interprovincial Boundary Commissions report to Parliament through the Minister of Energy, Mines and Resources.

**Department of the Environment.**—This Department was established by Act of Parliament in 1971 (SC 1970-71, c. 42), its function being to improve the environment of Canada and to unite the efforts of the Federal Government and other governments and agencies related to the improvement of the threatened world environment. It is essentially a reorganization and a grouping together of many already existing agencies. The former Department of Fisheries and Forestry formed the nucleus of the new Department and complete units, branches or sectors already working on environmental problems were transferred from other departments, such as the Water Sector from Energy, Mines and Resources, the Canadian Meteorological Service from the Ministry of Transport, the Air Pollution Control and Public Health Engineering Divisions from the Department of National Health and Welfare, the Canadian Wildlife Service from the Department of Indian Affairs and Northern Development and the Canada Land Inventory from the Department of Regional Economic Expansion.

The Department is organized into two main wings, each under an Assistant Deputy Minister. The Operations Wing consists of six services: the Environment Protection Service; the Fisheries Service; the Lands, Forests and Wildlife Service; the Atmospheric Environment Service; the Water Management Service; and the Finance and Administration Service. The Policy, Planning and Research Wing advises the Minister and the Deputy Minister on Departmental policy and planning and on legal and intergovernmental affairs. A Canadian Environmental Advisory Council made up of experts from outside the Government service will be formed to advise the Minister following the review of activities that may be detrimental to the environment and the consideration of resource development projects in the context of their effect on the environment and to assist in the co-ordination of private and public groups working toward the resolution of environmental problems.

The Minister of the Environment reports to Parliament on behalf of the Fisheries Prices Support Board, the Freshwater Fish Marketing Corporation, the Canadian Saltfish Corporation and the Eastern Rockies Forest Conservation Board.

**Department of External Affairs.**—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1970, c. E-20). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by an Associate Under-Secretary and by five Assistant Under-Secretaries and is advised by officers in charge of Bureaus, Offices and Divisions. The Directors-General or Directors of these units are each responsible for a part of the work of the Department and are assisted by Foreign Service Officers, Administrative Services Officers and specialists in various occupational groups, as well as by an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. Canada maintains approximately 152 diplomatic, consular and other missions, 59 of which are non-resident.

The work of the Department in Ottawa is carried on by four regional, six functional and three administrative bureaus, in addition to a number of operational units performing staff or special functions. The four regional bureaus administer 11 geographical divisions, each of which is respons-

ible for a number of the countries that make up the region administered by the bureau to which it belongs: (1) the European Affairs Bureau includes three divisions—Western Europe, Eastern Europe and Northwestern Europe including Britain; (2) the Bureau of Asian and Pacific Affairs includes two divisions—East Asia, and Pacific and South Asia; (3) the Bureau of African and Middle Eastern Affairs includes three divisions—African Affairs I, African Affairs II, and Middle Eastern; and (4) the Bureau of Western Hemisphere Affairs includes three divisions—Caribbean (Commonwealth), Latin American, and United States. The six functional bureaus include 18 divisions: (1) the Bureau of Economic and Scientific Affairs includes four divisions—Aid and Development, Commercial Policy, Scientific Relations, and Environmental Problems, Transportation, Communications and Energy; (2) the Bureau of Legal and Consular Affairs includes three divisions—Consular, Legal Advisory, and Legal Operations; (3) the Bureau of Defence and Arms Control includes two divisions—Arms Control, Disarmament and Peace-keeping, and Defence Relations; (4) the Bureau of Public Affairs has four divisions—Academic Relations Service, Cultural Affairs, Historical, and Information; (5) the Bureau of Coordination includes three divisions—Commonwealth Institutions, Federal-Provincial Coordination, and Francophone Institutions; and (6) the Bureau of United Nations Affairs includes two divisions—United Nations Economic and Social Affairs, and United Nations Political and Institutional Affairs. The three administrative bureaus are responsible respectively for Personnel, Finance and Administration, and Communications and Information Systems. In addition, there is an Inspection Service, a Policy Analysis Group, an Operations Centre, a Central Staff and an Interdepartmental Committee on External Relations.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States. The Secretary of State for External Affairs reports to Parliament for the Canadian International Development Agency.

**Department of Finance.**—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1970, c. F-10). The Department is responsible for the financial administration of Canada including the raising of money required for the various government activities by way of taxation or borrowing. The work of the Department is organized into the following Divisions: Personal, Estate and Commodity Tax, Corporations and Business Incomes, Economic Development, Federal-Provincial Relations, Fiscal Policy, Pensions and Social Insurance, Resource Programmes, Municipal Grants, Economic Analysis, Government Finance, Capital Markets, International Finance, Tariffs, International Economic Relations, and International Programmes. The Inspector General of Banks is a branch of the Department. The Tariff Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, the Anti-dumping Tribunal, the Canada Deposit Insurance Corporation, and the Department of Insurance report to Parliament through the Minister of Finance who is also the spokesman in the Cabinet and the House of Commons for the Auditor General of Canada.

**Historic Sites and Monuments Board.**—This Board was established in 1919 and now operates under authority of RSC 1970, c. H-6. It is an appointed body of 12 provincial and two federal officials which advises the Minister of Indian Affairs and Northern Development on matters of national historic importance with particular reference to commemoration or preservation.

**Department of Indian Affairs and Northern Development.**—The Department of Indian Affairs and Northern Development was established in June 1966, superseding the Department of Northern Affairs and National Resources; it now operates under authority of RSC 1970, c. I-7. In 1968, the Department was reorganized, creating, in addition to departmental support services and a Technical Services Branch, three distinct program areas: (1) the Indian and Eskimo Affairs Program includes education, Indian trust administration and an Indian-Eskimo Bureau which provides a focal point for the federal administration for Indian and Eskimo affairs; (2) the Northern Development Program covers major resource development in the Canadian North, industrial development for Indians and Eskimos, land management of Indian reserves, wetland acquisition, management of territorial resources along with economic research and advice; (3) the Conservation Program, including National Parks and Historic Sites and Parks. As a result of the proposed Indian Policy, a group called the Indian Consultation and Negotiation Group has been created to carry out negotiations and consultations with Indian organizations and bands and with provincial governments on the policy proposals.

The Commissioner of the Northwest Territories and the Commissioner of Yukon Territory report to Parliament through the Minister of Indian Affairs and Northern Development. The Minister is also responsible to Parliament for the Northern Canada Power Commission, the National Battlefields Commission and the Historic Sites and Monuments Board of Canada. The Northern Scientific Adviser's Office acts in an advisory capacity to the Minister.

**Department of Industry, Trade and Commerce.**—In 1969, the Departments of Industry and of Trade and Commerce were merged to form the Department of Industry, Trade and Commerce, which operates under authority of RSC 1970, c. I-11. Its functions are to: (1) promote the establishment, growth and efficiency of manufacturing, processing and tourist industries in Canada, contribute to the sound development and productivity of Canadian industry generally and foster the expansion of Canadian trade; (2) develop and carry out such programs and projects as may be appropriate to (a) assist manufacturing and processing industries to adapt to changes in technology and to changing conditions in domestic and export markets, (b) assist manufacturing and processing

industries to develop their unrealized potential, to rationalize and re-structure their productive facilities and corporate organizations and to cope with exceptional problems of adjustment, and (c) promote and assist product and process development and increased productivity, the greater use of research, the application of advanced technology and modern management techniques, the modernization of equipment, the utilization of improved industrial design and the development and application of sound industrial standards in Canada and in world trade; (3) improve the access of Canadian produce, products and services into external markets through trade negotiations and the promotion of trade relations with other countries and contribute to the improvement of world trading conditions; (4) promote the optimum development of Canadian export sales of all produce, products and services; (5) provide support services for industrial and trade development, including information, import analysis and traffic service; (6) analyse the implications for Canadian industry, trade and commerce and for tourism of government policies related thereto in order to contribute to the formulation and review of those policies; (7) compile and keep up-to-date detailed information in respect of manufacturing and processing industries in Canada and of trends and developments in Canada and abroad relating to Canadian industrial development and trade; and (8) promote the optimum development of income from tourism and compile and keep up-to-date detailed information in respect of the tourist industry and of trends and developments in Canada and abroad relating to tourism.

The Department is organized into five major functional groups: Trade and Industrial Policy, Office of Economics, Industry and Trade Development, Office of Tourism, and Administration. The Trade and Industrial Development component comprises the Offices of General Relations, Area Relations, Industrial Policy Adviser and Special Import Policy. The Office of Economics is made up of the following Branches: General Analysis, Investment Analysis, Market Analysis, and Productivity. The Industry and Trade Development segment contains an Operations group composed of a Programs Office and nine industry sector Branches (Aerospace, Marine and Rail; Agriculture, Fisheries and Food Products; Apparel and Textiles; Chemicals; Electrical and Electronics; Machinery; Materials; Mechanical Transport and Wood Products); an External Services group consisting of a Programs Office, the International Defence Programs Branch and the Trade Commissioner Service (which operates 78 trade offices in 55 countries), an Office of Promotional Services that directs the Fairs and Missions Branch, the Publicity Branch and the Industry, Trade and Traffic Services Branch (which operates eight Regional Offices in Canada and a World Exhibitions Liaison Office), Offices of Science and Technology and of Design, and a Grains Program Office. The Office of Tourism includes the Canadian Government Travel Bureau and the Travel Industry Branch.

The Minister also reports to Parliament on behalf of Statistics Canada and the Export Development Corporation. Boards and other organizations reporting to the Minister are the Adjustment Assistance Board, the General Adjustment Assistance Board, the Machinery and Equipment Advisory Board, the Pharmaceutical Industry Development Advisory Committee, the National Design Council, the Standards Council of Canada and the Textile and Clothing Board.

**Information Canada.**—This organization, established Apr. 1, 1970, was created to advise federal departments on their information programs, to co-ordinate information programs involving more than one department, and to produce information on the Federal Government and on Canada in general. Such information will be disseminated by conventional means and also through Regional Enquiry Centres to be set up across the country. Equally important is its responsibility to provide Parliament and Federal Government agencies with information on the attitudes and opinions of the Canadian people, as expressed individually, through the media or through attitudinal surveys.

On the date of its establishment, Information Canada assumed responsibility for the publishing functions of the Queen's Printer and for the Canadian Government Exhibition Commission (now Information Canada—Expositions Division); it also assumed responsibility for the Still Photo Library of the National Film Board. Information Canada reports to Parliament through the Minister of State responsible for Information Canada.

**Department of Insurance.**—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1970, c. I-17). Under the Superintendent of Insurance, who is the Deputy Head, the Department administers the statutes of Canada applicable to: insurance, trust, loan and investment companies incorporated pursuant to an Act of the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; pension plans organized and administered for the benefit of persons employed in connection with certain federal works, undertakings and businesses; and life insurance issued to certain members of the Public Service prior to May 1954.

Under the relevant provincial statutes, the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia. It reports to Parliament through the Minister of Finance.

**International Joint Commission.**—This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government

of Canada), is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

**Department of Justice.**—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1970, c. J-2). The Minister of Justice is the official legal adviser of the Governor General and the legal member of the Queen's Privy Council for Canada. It is his duty to see that the administration of public affairs is in accordance with law, to superintend all matters connected with the administration of justice in Canada that are not within the jurisdiction of the provincial governments, to advise upon the legislation and proceedings of the provincial legislatures, and generally to advise the Crown upon all matters of law referred to him by the Crown. The Minister of Justice is, *ex officio*, Her Majesty's Attorney General of Canada. In this capacity it is his duty to advise the heads of the departments of the Government of Canada upon all matters of law connected with such departments, to settle and approve all instruments issued under the Great Seal of Canada, and to regulate and conduct all litigation for or against the Crown in the right of Canada.

The Minister of Justice reports to Parliament for the Tax Review Board.

**Department of Labour.**—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1970, c. L-2). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; female employee equal pay; government employee compensation; merchant seamen compensation; safety in employment; and hours of work, minimum wages, annual vacations and holidays with pay. It promotes joint consultation with industry through labour-management committees and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission and the Canada Labour Relations Board report to Parliament through the Minister of Labour. The Canada Labour Relations Board administers certain provisions of the Industrial Relations and Disputes Investigation Act.

**Library of Parliament.**—The Library of Parliament as such was established in 1871 although it existed earlier. It currently functions under RSC 1970, c. L-7. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the Parliamentary Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Federal Court of Canada, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. A special research branch serves Parliamentarians only. The Parliamentary Librarian has the rank of a Deputy Head of a department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

**Department of Manpower and Immigration.**—This Department was constituted in January 1966 and now operates under authority of RSC 1970, c. M-1. It is composed of two operational divisions and four support services.

The Canada Manpower Division is responsible for the counselling and placement of workers, the recruitment of workers to meet industry's requirements, manpower training and mobility, community adjustment of migrants and immigrants, rehabilitation of vocationally handicapped workers, and manpower adjustment and employer consultation services. The Canada Immigration Division administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants to Canada, and for the exclusion or deportation of undesirables.

The Program Development Service provides research and develops and evaluates programs for the two main operating divisions. Other support services are Financial and Management, Personnel, and Information.

The Department maintains 390 Canada Manpower Centres and 94 Canada Immigration Centres in Canada, as well as regional offices located in Halifax, Montreal, Toronto, Winnipeg and Vancouver. It also maintains 48 Canadian immigration offices abroad.

**Department of National Defence.**—The Department of National Defence and the Canadian Forces operate under the National Defence Act (RSC 1970, c. N-4). The control and management of all matters relating to national defence, the Canadian Armed Forces and the Defence Research Board are the responsibility of the Minister of National Defence; the duties and functions relating to civil emergency operations in peace and war are also assigned to the Department, with the Canadian Forces undertaking the role.

The Canadian Forces Reorganization Act, 1968 “unified” the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force into a single service called the Canadian Armed Forces. The civilian administration of the Department is organized under the Deputy Minister, who maintains control over the financial aspects of operational policy, logistics, and personnel and administration. The Defence Research Board, created in 1947, conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel.

A Defence Council, consisting of the Minister of National Defence as Chairman, the Deputy Minister of National Defence, the Chief of Defence Staff, the Chairman of the Defence Research Board and the Vice Chief of Defence Staff, meets at regular intervals to consider and advise on major policy matters.

The Crown corporation, Defence Construction (1951) Limited, reports to Parliament through the Minister of National Defence. The Emergency Measures Organization (EMO) reports to the Minister of National Defence through the Deputy Minister.

**National Energy Board.**—This Board was established under the National Energy Board Act, 1959 (RSC 1970, c. N-6) for the purpose of assuring the best use of energy resources in Canada. The Board, composed of seven members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the import of motor gasoline and motor gasoline-blending components, the export of electric power, and the construction of the lines over which power is exported or imported. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

**National Film Board.**—The National Film Board, established in 1939, operates under the National Film Act (RSC 1970, c. N-7) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is chairman of the Board, three members from the Public Service of Canada and five members from outside the Public Service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films “designed to interpret Canada to Canadians and to other nations”. The Board is responsible for the production and processing of films for government departments. Its head office is located in Ottawa and its operations are carried out in Montreal.

**Department of National Health and Welfare.**—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1970, c. N-9). The original Department of Health formed in 1919 later became part of the Department of Pensions and National Health, which was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is composed of: the Research and Statistics Directorate; the Administration Branch; and seven other Branches—Health Services, Health Insurance and Resources, Medical Services, Food and Drug, Income Security, Welfare Assistance and Services and Special Programmes. The health Branches come under the Deputy Minister of National Health and the welfare Branches under the Deputy Minister of National Welfare. They also carry responsibility in keeping with Canada’s role in the fields of international health and international welfare, respectively.

The Department has charge of matters relating to the promotion and preservation of the health, social security and social welfare of the people of Canada over which the Parliament of Canada has jurisdiction. Its functions include investigation and research into public health and welfare; inspection and medical care of immigrants and seamen and medical services for and in conjunction with the Canadian Coast Guard Service; supervision of health facilities on all forms of transportation; enforcement of regulations of the International Joint Commission relating to health; promotion and conservation of the health of Federal Government employees; collection, publication and distribution of information relating to health, sanitation and social and industrial conditions affecting the health of Canadians; and co-operation with provincial authorities with a view to the co-ordination of efforts directed toward the preservation and improvement of public health and toward the provision of social security and welfare for the people of Canada.

Departmental programs on health include: the Hospital Insurance and Diagnostic Services Program, under which contributions are made in respect of programs administered by the provinces providing hospital insurance and laboratory and other services in aid of diagnosis; the Medical Care Insurance Program, under which contributions are made toward the cost of insured medical care services incurred by the provinces pursuant to provincial medical care plans; the Health Re-

sources Fund Program, assisting the provinces in the acquisition, construction, and renovation of health training facilities and research institutions; the Food and Drug Program, for the protection of the Canadian consumer from health hazards and fraud in the manufacture, importation, advertising, and sale of food, drugs, cosmetics, medical devices, and hazardous products; the Narcotic Drug Control Program; the National Health Grant Program, providing for grants to the provinces for the development and extension of health services; federal emergency health services; assistance and consultation services to the provinces, upon request, respecting blindness control, child and maternal health, environmental health, mental health, dental health, nursing, medical rehabilitation, bacteriology, virology, parasitology and clinical chemistry, zoonoses, nutrition, and health facilities design; an environmental health program, concerned with the provision of advice, the development of standards, and the design and conduct of studies and research directed to the assessment of the health significance and control of such environmental health hazards as air and water pollution, noise, industrial hazards, and exposure to harmful radiations; a drug adverse reaction reporting program, and a central clearing house for the Canadian Poison Control Centres; health, medical and hospital services to the Indians and Eskimos across Canada and to other elements of the population in the Yukon and Northwest Territories; government employee health services; and leprosy control.

Departmental operating programs on *welfare* include: the Canada Pension Plan, a contributory insurance program providing a retirement pension at age 65, survivors' benefits for widows, disabled widowers, orphans, and a lump-sum death benefit; the old age security program, a monthly pension payable without a means test to all persons aged 65 and over who meet the residence requirements; a guaranteed income supplement to old age security pensioners who have little or no income other than the pension; programs of family allowances, providing a monthly payment to the mother on behalf of children under 16 years of age; a program of youth allowances, providing a monthly payment on behalf of children aged 16 and 17 who are attending school full time or unable to attend because of mental or physical disability; the Canada Assistance Plan, a measure to complement other income security measures, administered by the provinces which are reimbursed by the Department for 50 p.c. of the cost; emergency welfare; a fitness and amateur sport program; and a system of welfare grants for professional training and research.

The National Council of Welfare, reconstituted in 1969 as a citizens advisory council, reports directly to the Minister who also reports to Parliament for the Medical Research Council.

**National Library.**—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1970, c. N-11). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the *National Union Catalogue* which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. The Library's own bookstock totals more than 400,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

**National Parole Board.**—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (RSC 1970, c. P-2) by which it is given absolute jurisdiction over all matters of parole, except that in respect of commuted death sentences it may only recommend rather than approve parole. It is composed of a chairman and eight members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Solicitor General of Canada.

**Department of National Revenue.**—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as of sales and excise taxes. The Taxation Division is responsible for the assessment and collection of income taxes, gift tax, old age security tax, Part I of the Canada Pension Plan, and estate taxes for Canada and all provinces, with certain exceptions, through its 28 district taxation offices and its Taxation Data Centre; on Jan. 1, 1972, the Division assumes responsibility for collecting premiums under the revised Unemployment Insurance Act.

**Office of the Auditor General.**—This Office originated in 1878 and currently functions under the Financial Administration Act (RSC 1970, c. F-10). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities. The Minister of Finance acts as spokesman in Parliament for the Auditor General.

**Office of the Chief Electoral Officer.**—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (SC 1969-70, c. 49), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Ter-

ritories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer is responsible directly to Parliament, the President of the Privy Council acting as spokesman for him in the Cabinet and the House of Commons.

**Office of the Representation Commissioner.**—The Office was established in 1963 under the provisions of the Representation Commissioner Act (RSC 1970, c. R-6). After each decennial census, the Representation Commissioner is responsible for preparing maps showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province. These maps are supplied to the 10 electoral boundaries commissions (one for each province) established under the provisions of the Electoral Boundaries Readjustment Act (RSC 1970, c. E-2). The Representation Commissioner is a member of each of the 10 commissions. The Secretary of State acts as spokesman for the Office in the Cabinet and the House of Commons.

**Post Office Department.**—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (RSC 1970, c. P-14) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of the money order service.

The Department's headquarters is located in Ottawa, with regional headquarters in Halifax, Montreal, Toronto and Vancouver. District offices are located in St. John's, Halifax, Moncton, Quebec City, Montreal, Ottawa, North Bay, Toronto, London, Winnipeg, Saskatoon, Edmonton and Vancouver.

**Privy Council Office.**—For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the Government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of Cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and Secretary to the Cabinet. Since 1946, the Privy Council Office has been further reorganized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office have been closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Cabinet Secretariat with the following divisions reporting to the Clerk of the Privy Council and Secretary to the Cabinet: Deputy Secretary to the Cabinet (Operations); Deputy Secretary to the Cabinet (Plans); and Deputy Secretary to the Cabinet (Federal-Provincial Relations). Within the Privy Council Office, submissions to the Governor in Council are received, draft orders and regulations prepared, approved Orders are circulated and, in addition, the duties of editing, registering and publishing the federal statutory regulations in Part II of the *Canada Gazette* are carried out. The various secretaries deal with secretarial work for the Cabinet and for Cabinet Committees and interdepartmental committees. This involves the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions; liaison with departments and agencies of the government; and the preparation of material for the Prime Minister.

The Office of the Prime Minister is organized as a Secretariat associated with the Privy Council Office and includes members of the Prime Minister's personal staff responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and for assisting the Prime Minister in his parliamentary duties.

**Public Archives.**—The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1970, c. P-27) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of source material relating to the history of Canada. It also has broad responsibilities in regard to the promotion of efficiency and economy in the management of the Federal Government records. The Historical Branch, located in the National Library and Archives Building, is a centre for research on the development of Canada. In addition to the selected records of the Federal Government, it possesses an extensive collection of private papers of individuals and societies, a map collection which is the most important of its kind in the country, and an extensive collection of paintings, drawings, prints, photographs, sound recordings and films relating to Canada. A specialized library is also at the disposal of searchers. The Records Management Branch operates a large Records Centre in Ottawa and regional centres in Toronto and Montreal where non-current departmental records are centralized, stored and serviced. It assists departments in their records management program. The Administrative Technical Services Branch operates the Central Microfilm Unit for the several departments of government.

Under the terms of the Laurier House Act (RSC 1952, c. 163), the Public Archives is responsible for the administration of Laurier House as a museum.

**Public Service Commission.**—Arrangements were made for civil service appointments under the first Civil Service Act of 1868 but the first Civil Service Commission was created only in 1908. This established the beginnings of the merit system which is today the cornerstone of personnel administration in the Public Service. The Act of 1918 gave the Commission authority to control recruitment, selection, appointment, classification and organization and to recommend rates of pay. The next Civil Service Act, passed in 1961, strengthened the principles of the merit system, clarified the Commission's role in other areas of personnel administration, and gave the staff associations the right to be consulted on matters about remuneration and conditions of employment.

The Public Service Employment Act (RSC 1970, c. P-32) which came into force on Mar. 13, 1967, redefined the Commission's role as the central staffing agency and extended its authority to the Public Service, covering certain groups of employees exempt from the previous Acts. The Public Service is specified in Schedule A of the Public Service Staff Relations Act. It does not include Crown corporations, such as the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and Air Canada. The new Act also reaffirms the merit principle, at the same time permitting delegation of the Commission's authority, although not its responsibility to Parliament. Under the Act, the Commission is relieved of responsibility for recommending rates of pay and conditions of service to the Government, for classification, and for consultation with staff associations on matters that are now the subject of collective bargaining.

The Public Service Commission reports to Parliament through the Secretary of State.

**Department of Public Works.**—The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act (RSC 1970, c. P-38). It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and protection work. Federal Government interest in the Trans-Canada Highway and the Northwest Highway System is also handled by the Department. The Department has six Regional Offices—one each at Halifax, Montreal, Ottawa, Toronto, Edmonton and Vancouver—and District Offices at other key points across the country are also maintained. Departmental organization includes a Design and Construction Branch, and Directorates of Customer and Public Relations, Program Planning and Coordination, Property Services and Building Administration, together with a Planning and Systems Branch, Financial Adviser, Personnel Adviser, Departmental (Executive) Secretary, Directorate of Program Management Evaluation and the Dominion Fire Commissioner.

**Department of Regional Economic Expansion.**—This Department was established in 1969 (RSC 1970, c. R-4). Its function is to ensure that economic growth is dispersed widely enough across Canada to bring employment and earning opportunities in the slow-growth regions as close as possible to those in the other parts of the country, without interfering with a high over-all rate of national growth. The legislation authorizes the Department, in co-operation with provincial governments and other federal agencies, to prepare development plans and programs designed to meet the special needs of particular areas.

The Department has five major divisions, each under the control of an Assistant Deputy Minister: Planning, Incentives, and the Eastern, Central and Western Regions. A major program provides development incentives to industry, in the form of cash grants, to encourage new productive employment in Designated Regions where such employment has been scarce. In 22 Special Areas, the Department is taking special action to encourage economic development and social adjustment. The Department is also responsible for programs under the Agricultural and Rural Development Act (ARDA); the Fund for Rural Economic Development (FRED); and the Prairie Farm Rehabilitation Act (PFRA)—which is concerned with land use adjustment, water development projects, and the establishment of tree shelterbelts. An Atlantic Development Council advises the Minister on programs and policies for fostering economic development and social adjustment in the Atlantic region.

The Minister of Regional Economic Expansion reports to Parliament for the Cape Breton Development Corporation.

**Royal Canadian Mounted Police.**—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North-West Mounted Police. It now operates under the Royal Canadian Mounted Police Act (RSC 1970, c. R-9) and is responsible for enforcing federal laws throughout Canada. By agreement with the governments of eight provinces (all provinces except Ontario and Quebec) it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. A Commissioner, appointed by the Governor in Council, has the control and management of the Force and of all matters connected therewith; he functions under the direction of the Solicitor General of Canada.

**Department of the Secretary of State.**—The duties, powers and functions of the Secretary of State of Canada extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: citizenship; elections; State ceremonial, the conduct of State correspondence

and the custody of State records and documents; the encouragement of the literary, visual and performing arts, learning and cultural activities; and libraries, archives, historical resources, museums, galleries, theatres, films and broadcasting.

The responsibilities of the Department of the Secretary of State include those pertaining to the administration of the following branches: Citizenship; Citizenship Registration; Education Support; Bilingualism Development Programmes; Arts and Cultural Support; Ceremonies and Special Events; and Translation Bureau. The Citizenship and Citizenship Registration Branches report to the Minister without Portfolio responsible for citizenship.

The Secretary of State reports to Parliament for the Canadian Film Development Corporation, the National Arts Centre Corporation, the National Film Board, the National Library, the Public Archives, the National Museums of Canada, the Canada Council, the National Broadcasting Corporation, the Canadian Radio-Television Commission, the Company of Young Canadians and the Public Service Commission.

**Department of the Solicitor General.**—Before 1936, the Office of the Solicitor General was either a Cabinet post or a Ministerial post outside the Cabinet. From 1936 to 1945 the position did not exist, the duties of the Office being wholly absorbed by the Attorney General of Canada. The Solicitor General Act, 1945 re-established the Solicitor General as a Cabinet officer and provided that "the Solicitor General shall assist the Minister of Justice in the Counsel work of the Department of Justice, and shall be charged with such other duties as are at any time assigned to him by the Governor-in-Council". This legislation was repealed in 1966 when a new Department of the Solicitor General was created and the Solicitor General of Canada was assigned responsibility for the Royal Canadian Mounted Police and the Canadian Penitentiary Service (RSC 1970, c. S-12). The Solicitor General also reports to Parliament for the National Parole Board, which is an independent agency. With this new legislation, the Solicitor General of Canada becomes the Cabinet Minister with primary responsibility in the fields of correction and law enforcement.

**Standards Council of Canada.**—This Council was established by Act of Parliament (SC 1969-70, c. 73), which received Royal Assent on Oct. 7, 1970. Its objects are to foster and promote voluntary standardization in fields relating to the construction, manufacture, production, quality, performance and safety of buildings, structures, manufactured articles and products and other goods, including components thereof, not expressly provided for by law, as a means of advancing the national economy, benefiting the health, safety and welfare of the public, assisting and protecting consumers, facilitating domestic and international trade and furthering international co-operation in the field of standards. Its function also includes the encouragement of preparations for change to the metric system.

The Council consists of not more than 57 members, of whom six are federal representatives, 10 are provincial representatives and 41 are representatives of national organizations. Membership is broadly representative of all levels of government, primary and secondary industries, distributive and service industries, trade associations, labour unions, provincial associations, consumer associations and the academic community.

The Council reports to Parliament through the Minister of Industry, Trade and Commerce.

**Statistics Canada.**—Statistics Canada became the new name for the Dominion Bureau of Statistics with the proclamation of a new Statistics Act (SC 1971, c. 15) on May 1, 1971. The bureau was initially set up by statute in 1918 as a central statistical agency for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257) which was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953. The 1971 Act replaces that statute.

The functions of Statistics Canada are to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct regularly a census of population and agriculture of Canada as required under the Act.

Statistics Canada is a major publication agency of the Federal Government; its reports cover all aspects of the national economy and social conditions of the country. The administrative head of the bureau is the Chief Statistician of Canada who has the rank of a Deputy Head of a department and reports to Parliament through the Minister of Industry, Trade and Commerce.

**Department of Supply and Services.**—The Department of Supply and Services was established on Apr. 1, 1969 (RSC 1970, c. S-18) incorporating certain services previously provided by other departments as recommended by the Royal Commission on Government Organization which stressed the need for the Federal Government to foster efficiency and effect economies wherever possible. The Minister of Supply and Services is also the Receiver General for Canada and exercises all the duties, powers and functions assigned to the Receiver General by law.

The Department is organized into two major administrations, each headed by a Deputy Minister directly responsible to the Minister. The Supply Administration administers the Supply Programme, the objective of which is to acquire and provide, at minimum cost, goods and services required by Federal Government departments and agencies. It also functions to maintain Federal Government equipment and provides printing facilities. Besides the 13 Field Supply Offices, the Supply Administration has one office each in London, England, and Koblenz, Germany. Some of

these Field Supply Offices perform purchasing, equipment maintenance and asset management functions; others are purchasing and maintenance centres or purchasing supply centres. As of Apr. 1, 1971, the Supply Administration was reorganized into the Commercial Supply Service, the Engineering Procurement Service and the Planning Service.

The Services Administration, acting for the Receiver General, provides payment or cheque-issuing services on behalf of all federal departments, maintains the fiscal accounts of Canada and prepares the public accounts. It offers departments and agencies a broad range of management and advisory services in management consulting, auditing and computer services fields. It also provides for all departments administrative services in connection with pay, pensions and other employee benefit plans, together with financial management reports and statistical information related to its cheque-issuing function. Services functions are carried out through approximately 40 regional and district offices throughout Canada and abroad.

The Minister of Supply and Services reports to Parliament for Polymer Corporation Limited, Canadian Commercial Corporation, Canadian Arsenals Limited, Crown Assets Disposal Corporation and the Royal Canadian Mint.

**Tariff Board.**—Constituted in 1931, the Board derives its duties and powers from four statutes: the Tariff Board Act (RSC 1970, c. T-1); the Customs Act (RSC 1970, c. C-40); the Excise Tax Act (RSC 1970, c. E-13) and the Anti-dumping Act (RSC 1970, c. A-15).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from customs duties or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board.

Under the provisions of the Customs Act, the Excise Tax Act and the Anti-dumping Act, the Tariff Board acts as a court to hear appeals from decisions of the Department of National Revenue, Customs and Excise, in respect of excise taxes, tariff classification, value for duty, drawback of customs duties and determination of normal value or export price in dumping matters. Declarations of the Board on appeals are final and conclusive but the Acts contain provisions for appeal on questions of law to the Federal Court and thence to the Supreme Court of Canada.

**Tax Review Board.**—The Tax Review Board, created in 1949 as the Income Tax Appeal Board and later changed to the Tax Appeal Board, now operates under the Tax Review Board Act 1970 (SC 1970-71, c. 11). The Board is declared by statute to be a court of record and has jurisdiction to hear appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act, the Old Age Security Act and certain sections of the Canada Pension Plan. An appeal lies from the Board to the Federal Court of Canada and a further appeal from that court to the Supreme Court of Canada. The Board consists of a chairman, an assistant chairman and four other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, ten times a year. The Board is under the jurisdiction of the Minister of Justice but is independent of the Department of Justice.

**Ministry of Transport.**—The role and structure of the former Department of Transport were changed and a Ministry was created Feb. 17, 1970. The new Ministry is a corporate structure of Crown corporations and operating administrations having varying degrees of autonomy, together with separate agencies for development and economic regulation. A Ministry headquarters staff supports the Minister and Deputy Minister in the functions of planning, policy formulation and assessment of program achievements in terms of the objectives of the Ministry.

The Canadian Marine Transportation Administration co-ordinates the functions of the St. Lawrence Seaway Authority, the National Harbours Board and the Marine Services components of the former Department of Transport. Its operations include management of the St. Lawrence Seaway through the St. Lawrence Seaway Authority and direct supervision of nine harbours and other facilities through the National Harbours Board; 300 public harbours and 11 others are administered by commissions under the supervision of the Ministry. It is also responsible for aids to navigation, search and rescue, nautical and pilotage services, marine agencies, steamship inspection and the Canadian Coast Guard.

The Canadian Air Transportation Administration controls and operates Canada's airways and federal airports and provides technical supervision in Canadian airspace of all aeronautical activities in the flight safety sense. These activities are conducted through the branches of Civil Aviation, Telecommunications and Electronics, Airports and Field Operations, Air Traffic Control, and Construction Engineering and Architectural, and the support branches of Corporate Planning, Finance and Personnel. The Canadian Air Transportation Administration also provides telecommunications and flight services to other components of the Ministry.

The Canadian Surface Transportation Administration has planning, programming and co-ordinating responsibilities relating to federal participation in the development and, where appropriate, operation of railway and highway systems, ferry services and bridges. The Administration has an ongoing interest in emerging technology in the area of new modes of surface transportation and their potential for application in new operating systems.

The recently organized Arctic Transportation Agency is responsible for developing and administering policy related to Ministry-supported transportation facilities and services in the Canadian North, in furtherance of the Government's national objectives there. Intermodal relationships between air, surface and marine transportation systems are a particular concern, as well as the compatibility of these systems with economic and technological growth in the North and with the needs of the residents. In this connection there is a special relationship between the Agency and the Department of Indian Affairs and Northern Development.

The Transportation Development Agency is responsible for initiating, promoting and co-ordinating transportation research and development activities, working closely with government agencies, industry and the academic community to provide a national focus for changing technology and development opportunities in the field of transportation.

The Ministry also includes Air Canada, Canadian National Railways, and Northern Transportation Company Limited. These three Crown corporations are autonomous, maintaining close consultation with the Minister to be consistent with the Government's general policies in the field of transportation. The Minister of Transport also reports to Parliament for the Canadian Transport Commission, the National Harbours Board and the St. Lawrence Seaway Authority.

**Treasury Board.**—The Treasury Board was first established as a committee of the Queen's Privy Council for Canada by Order in Council PC 3 of July 2, 1867, and was made a statutory committee in 1869. The Minister of Finance was appointed Chairman of the Board, with four other Privy Councillors to be designated as members by the Governor in Council. The Secretary of the Board and the members of his staff were employed by the Department of Finance.

By the Government Organization Act, 1966 (SC 1966, c. 25) the Board Secretariat was established as a separate department of government with its own Minister, the President of the Treasury Board. The committee constituting the Treasury Board includes, in addition to the President, the Minister of Finance and four other Privy Councillors.

Amendments to the Financial Administration Act, 1966 (RSC 1970, c. F-10), define more clearly the Treasury Board's responsibilities as the central management agency of government. These responsibilities include expenditure control, including allocation of resources among departments and agencies of government; management of the personnel function in the Public Service; and improvement in the efficiency of management and administration in the Public Service.

The staff of the Treasury Board is divided into four Branches: the Administrative Policy Branch is responsible for developing administrative and accounting procedures throughout the Government and policies systems and methods with respect to the acquisition, disposal and use of real property, equipment, materials, supplies and common services; the Planning Branch is responsible for the development and application of systems and procedures for evaluating the effectiveness and efficiency of programs and projects and for providing advice and planning assistance for organizational change in government; the Personnel Policy Branch is responsible for the classification of positions, the rates of pay, conditions of employment and for representing the Government in collective bargaining with bargaining agents representing employees in the Public Service; and the Program Branch is responsible for such matters as the financial management functions of short- and long-range expenditure forecasting, program analysis, expenditure control and estimates preparation.

**Department of Veterans Affairs.**—This Department, established in 1944 (RSC 1970, c. V-1), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department is empowered to provide treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau, which on Mar. 31, 1971 (SC 1970-71, c. 31) became the Bureau of Pensions Advocates, assists veterans in the preparation and presentation of pension claims and reports directly to Parliament through the Minister of Veterans Affairs. The same statute authorized the establishment of the Pension Review Board, an independent body that provides new and improved adjudicating process of appeal for the veteran who is dissatisfied with a previous ruling of the Entitlement Board of the Canadian Pension Commission or a decision of two members of the Commission.

The Department has treatment institutions and facilities in nine major urban centres across Canada and it maintains administrative offices in the large cities and in London, England. The offices in Canada are shared with the Canadian Pension Commission, the War Veterans Allowance Board and the Bureau of Pensions Advocates.

The Canadian Pension Commission, established by the Pension Act (RSC 1970, c. P-7) and the War Veterans Allowance Board, established by the War Veterans Allowance Act (RSC 1970, c. W-5) report to Parliament through the Minister of Veterans Affairs.

**War Veterans Allowance Board.**—This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1970, c. W-5) is a quasi-judicial body consisting of 10 members, including a chairman and a deputy chairman, appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act. It reports to Parliament through the Minister of Veterans Affairs. Its functions include the responsibility of ensuring that the 19 District Authorities, located in various regions throughout Canada, interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body which may consider the appeal of an appellant against the decision of a District Authority.

### Section 3.—Crown Corporations

During the past quarter-century, as the work of government has become more complex, greater reliance than formerly has been placed on the Crown corporation type of organization as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation, about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations. The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation—departmental, agency and proprietary.

*Departmental Corporations.*—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. The following corporations are classified as departmental corporations in Schedule B to the Financial Administration Act:—

- Agricultural Stabilization Board
- Atomic Energy Control Board
- Director of Soldier Settlement
- The Director, the Veterans' Land Act
- Economic Council of Canada
- Fisheries Prices Support Board
- Medical Research Council
- Municipal Development and Loan Board\*
- National Museums of Canada
- National Research Council
- Science Council of Canada
- Unemployment Insurance Commission.

*Agency Corporations.*—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of

\* See footnote to p. 154.

trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following corporations are classified as agency corporations in Schedule C to the Financial Administration Act:—

- Atomic Energy of Canada Limited
- Canadian Arsenal Limited
- Canadian Commercial Corporation
- Canadian Dairy Commission
- Canadian Film Development Corporation
- Canadian Livestock Feed Board
- Canadian National (West Indies) Steamships Limited\*
- Canadian Patents and Development Limited
- Canadian Saltfish Corporation
- Centennial Commission\*
- Company of Young Canadians
- Crown Assets Disposal Corporation
- Defence Construction (1951) Limited
- National Battlefields Commission
- National Capital Commission
- National Harbours Board
- Northern Canada Power Commission
- Royal Canadian Mint.

*Proprietary Corporations.*—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following corporations are classified as proprietary corporations in Schedule D to the Act:—

- Air Canada
- Canada Deposit Insurance Corporation
- Canadian Broadcasting Corporation
- Canadian Overseas Telecommunication Corporation
- Cape Breton Development Corporation
- Central Mortgage and Housing Corporation
- Eldorado Aviation Limited
- Eldorado Nuclear Limited
- Export Development Corporation
- Farm Credit Corporation
- Freshwater Fish Marketing Corporation
- National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
- Northern Transportation Company Limited
- Polymer Corporation Limited
- St. Lawrence Seaway Authority
- Seaway International Bridge Corporation Limited (formerly Cornwall International Bridge Company Limited)\*.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act, although, if there is any inconsistency between the provisions of that Part and those of any

\* Not included in the thumbnail sketches. The Municipal Development Loan Board and the Centennial Commission are still in existence legally but are no longer operative. The Canadian National (West Indies) Steamships Limited no longer owns or operates vessels but still reports assets and the Seaway International Bridge Corporation Ltd. operates the international toll bridges system between Cornwall, Ont., and Roosevelttown, N.Y., on behalf of the owners, the St. Lawrence Seaway Authority and the Saint Lawrence Seaway Development Corporation.

other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, loans for limited working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance to the corporation. The corporation may secure financing through parliamentary grants, loans or advances, by the issue of capital stock to the Government, or by the sale of bonds to either the Government or the public. Several corporations finance all or a portion of their requirements from their own resources or earnings.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations. Crown corporations are also liable for the payment of provincial retail sales taxes, gasoline or motor vehicle fuel taxes and motor vehicle fees in terms of the Crown Corporations (Provincial Taxes and Fees) Act of 1964.

*Unclassified Corporations.*—The following Crown corporations, because of the special nature of their operations, are not classified in the Financial Administration Act but are governed by their own Acts of incorporation: the Bank of Canada; the Canada Council; the Canadian National Railways Securities Trust; the Canadian Wheat Board; the Industrial Development Bank; and the National Arts Centre Corporation. The only provision of the FAA to which they are subject is that governing the appointment of auditors. The Eastern Rockies Forest Conservation Board (a joint federal-provincial corporation) is also governed by its own Act of incorporation.

**Agricultural Stabilization Board.**—The Board was established in 1958 (RSC 1970, c. A-9) to administer the provisions of the Agricultural Stabilization Act. The Board reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

**Air Canada.**—Formerly Trans-Canada Air Lines, the corporation was incorporated by Act of Parliament in 1937 to provide a publicly owned air transportation service, with powers to carry on its business throughout Canada and outside of Canada. Air Canada now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, Belgium, France, Switzerland, West Germany, Austria, Denmark, the Soviet Union, Czechoslovakia, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. Air Canada is responsible to Parliament through the Minister of Transport.

**Atomic Energy Control Board.**—By Act of Parliament (RSC 1970, c. A-19) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

**Atomic Energy of Canada Limited.**—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1970, c. A-19) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Minister of Energy, Mines and Resources.

**Bank of Canada.**—Legislation of 1934 (RSC 1970, c. B-2) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment as far as may be possible within the scope of monetary action. The Bank acts as the

fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a governor, a deputy governor and 12 directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance.

**Canada Council.**—The Council was established by Order in Council dated Apr. 15, 1957, under the terms of the Canada Council Act (RSC 1970, c. C-2) assented to Mar. 28, 1957. It is composed of a chairman, a vice-chairman and 19 other members, a director and an associate director. The function of the Council is to encourage the arts, humanities and social sciences in Canada, mainly through a broad program of fellowships and grants. Its principal sources of income are an annual grant of the Canadian Government, which amounted to \$24,200,000 for the year ended Mar. 31, 1971, and to \$24,310,000 for the year ended Mar. 31, 1972, and an Endowment Fund, originally of \$50,000,000, which has an annual yield of approximately \$4,900,000. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Secretary of State.

**Canada Deposit Insurance Corporation.**—The Corporation was established by legislation (RSC 1970, c. C-3), which received Royal Assent on Feb. 17, 1967. It is empowered to insure Canadian currency deposits other than those of Canada, up to \$20,000 per person, in banks, federally incorporated trust and loan companies that accept deposits from the public, and in similar provincially incorporated institutions that are authorized by their provincial governments to apply for such insurance. The Corporation is also empowered to act as a lender of last resort for member institutions. The Board of the Corporation comprises a chairman, appointed by the Governor in Council, and four other directors who hold the positions of Governor of the Bank of Canada, Deputy Minister of Finance, Superintendent of Insurance and Inspector General of Banks. It reports to Parliament through the Minister of Finance.

**Canadian Arsenals Limited.**—The principal function of this Crown corporation is to operate the government-owned facilities for the production of certain defence materiel. It was established under the Companies Act by Letters Patent dated Sept. 20, 1945, and is subject to the Government Companies Operation Act (RSC 1970, c. G-7) and certain provisions of the Financial Administration Act (RSC 1970, c. F-10). It reports to Parliament through the Minister of Supply and Services.

**Canadian Broadcasting Corporation.**—The CBC was established by Act of Parliament in 1936, replacing an earlier public broadcasting agency, the Canadian Radio Broadcasting Commission, created in 1932. The Broadcasting Act of 1963 (RSC 1970, c. B-11) describes the CBC as "established by Parliament for the purpose of providing the national broadcasting service".

The Corporation has a president and fourteen other directors appointed by the Governor in Council. The President is the chief executive officer. The Executive Vice-President is appointed by the Corporation on the recommendation of the President and with the approval of the Governor in Council. He is responsible to the President for the management of broadcasting operations in accordance with policies prescribed by the Corporation.

CBC operations are financed by public funds voted annually by Parliament, with supplementary revenue obtained from commercial advertising. The CBC's accounts are audited annually by the Auditor General of Canada and the Corporation reports annually to Parliament through the Minister designated in the Broadcasting Act, the Secretary of State of Canada.

The CBC head office is located in Ottawa. The Corporation's three operational divisions are the English Services Division with headquarters in Toronto; the French Services Division with headquarters in Montreal; and the External Services Division encompassing all the CBC's foreign operations including the Montreal-based International Service. Regional and local production centres, serving their own areas and also contributing to national programming, are located at various points across the country.

**Canadian Commercial Corporation.**—Established in 1946 by Act of Parliament (RSC 1970, c. C-6), the Canadian Commercial Corporation is wholly owned by the Government of Canada. Initially it assumed the undertaking of the then Canadian Export Board covering procurement in Canada of goods and services on behalf of foreign governments and United Nations relief agencies. In 1947 responsibility for procurement of the requirements of the Department of National Defence was transferred from the Department of Reconstruction and Supply to the Corporation which fulfilled these additional functions until the formation of the Department of Defence Production in 1951. In 1963 the staff of the Corporation was integrated with that of the Department of Defence Production, now the Department of Supply and Services, which provides all the management and services required by the Corporation.

The Corporation continues to act primarily as the Canadian Government contracting and procurement agency on behalf of foreign countries desirous of purchasing defence or other supplies and services from Canada on a government-to-government basis. It reports to Parliament through the Minister of Supply and Services.

**Canadian Dairy Commission.**—This Commission, which reports to Parliament through the Minister of Agriculture, was established on Dec. 2, 1966 (RSC 1970, c. C-7) to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality. The Commission has three members appointed by the Governor in Council and operates with the advisory assistance of a nine-member Consultative Committee appointed by the Minister.

**Canadian Film Development Corporation.**—This Corporation, established by Act of Parliament in March 1967 (RSC 1970, c. C-8), has the function of fostering and promoting the development of a feature film industry in Canada through investment in productions, loans to producers, grants to film-makers and film technicians, awards for outstanding accomplishments, and advice and assistance in distribution and administrative matters. It works in co-operation with other federal departments and agencies and with provincial departments and agencies having like interests and finances its operations from a film development advance account in the Consolidated Revenue Fund. The Corporation consists of the Government Film Commissioner and six other members appointed by the Governor in Council for terms of five years, except for the first appointees, three of whom were appointed for three years and three for five years. The Corporation reports to Parliament through the Secretary of State.

**Canadian Livestock Feed Board.**—The Canadian Livestock Feed Board is a Crown corporation established pursuant to the Livestock Feed Assistance Act (RSC 1970, c. L-9). The objects of the corporation are to ensure that sufficient feed grain and storage for feed grain are available to meet the needs of livestock feeders and to ensure reasonable stability and fair equalization of feed grain prices in Eastern Canada and in British Columbia. Its powers include authority to make payments related to the cost of feed grain storage and transportation costs to attain its objectives. It may also buy, transport, store and sell feed grains in Eastern Canada and British Columbia when authorized by the Governor in Council.

The Board consists of a chairman, a vice-chairman and two members, and it reports to Parliament through the Minister of Agriculture. There is also an Advisory Committee made up of seven members.

**Canadian National Railways.**—The Canadian National Railway Company was incorporated (RSC 1970, c. C-10) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1958. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a chairman and board of directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

**Canadian Overseas Telecommunication Corporation.**—This Crown company was created on Jan. 1, 1950 by Act of Parliament (RSC 1970, c. C-11) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation reports to Parliament through the Minister of Communications.

**Canadian Patents and Development Limited.**—This Crown corporation was set up in 1947 pursuant to authority granted in an amendment to the National Research Council Act passed in 1946. The purpose of the company, which is a subsidiary to the National Research Council, is to patent and license new products and processes that come out of NRC research, research of other government departments and agencies, and research of Canadian universities. Proposals for patents are assessed with regard to originality, existence of similar patented products or processes, commercial appeal, humanitarian or scientific value, and cost of developing, promoting and marketing. CPDL initiates and finances the development of many inventions to a stage where it is economically possible for private industry to carry them through to production and sale, thus bridging the gap between research and industry. Profits from inventions are used to sponsor less profitable but often more beneficial inventions, such as highly specialized surgical or scientific instruments.

The company, whose Head Office is located at 275 Slater St., Ottawa, reports to Parliament through a designated Minister, at present the President of the Treasury Board.

**Canadian Saltfish Corporation.**—The Canadian Saltfish Corporation was established under the Saltfish Act (SC 1969-70, c. 32), assented to on Mar. 25, 1970, and became operative on May 4, 1970. Its main purpose is to improve the earnings of fishermen and other primary producers of cured saltfish. It does this by the purchase, processing, packing and marketing of the fish produced in

participating provinces. In 1971, these provinces were Newfoundland and Labrador, and Quebec in respect of its lower north shore. The Corporation operates without grant appropriation from Parliament and distributes any excess of income over expenses to participating fishermen and other primary producers. It reports to Parliament through the Minister of the Environment.

**Canadian Wheat Board.**—The Board was incorporated in 1935 under the Canadian Wheat Board Act (RSC 1970, c. C-12) to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board reports to Parliament through a designated Minister.

**Cape Breton Development Corporation.**—This Corporation was created by an Act of Parliament, assented to on July 7, 1967 (RSC 1970, c. C-13) and came into existence by proclamation on Oct. 1, 1967, as a proprietary Crown corporation. The Corporation was established to promote and assist the financing and development of industry on the Island and to provide employment outside the coal producing industry to broaden the base of the economy of the Island.

The Corporation has acquired the former interests of the major coal producer in the Sydney coalfield and, in accordance with its approved plan as required by Sect. 17 of the Act, is operating and reorganizing four mines with a view to the rationalization of coal production.

The Act provides for a board of directors, comprised of a chairman, a president and five other directors. Head Office is located in Sydney, N.S. The Corporation reports to Parliament through the Minister of Regional Economic Expansion. Its operations are financed by the Government of Canada with some assistance from the Government of Nova Scotia for industrial development projects.

**Central Mortgage and Housing Corporation.**—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (RSC 1970, c. C-16), the Corporation insures mortgage loans made by approved lenders for new and existing housing and makes direct loans in resource communities and rural areas; guarantees home improvement loans made by banks, undertakes subsidized rental housing projects and land assembly developments under federal-provincial arrangements; offers loans and subsidies for public housing projects; makes loans for land assembly projects to be used for general residential development; makes loans to individuals or organizations for low-rental housing projects; makes loans for students' housing and to provinces and municipalities with provincial concurrence for sewage treatment projects designed to eliminate water and soil pollution; makes contributions and loans to provinces and municipalities for urban renewal operations; conducts housing research; encourages urban planning and owns and manages rental housing units including those built for war workers and veterans. The Corporation arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Minister of State for Urban Affairs.

**Company of Young Canadians.**—This corporation was established by Act of Parliament on July 11, 1966, amended in 1969. It now operates under authority of RSC 1970, c. C-26. The corporation consists of a Council of the Company and persons who are officers, employees and volunteer-members of the Company. The Council has not more than nine members and not less than seven members appointed by the Governor in Council. Terms of office for members of the Council do not exceed three years. The objects of the Company are to support, encourage and develop programs for social, economic and community development in Canada through voluntary service. The corporation reports to Parliament through the Secretary of State.

**Crown Assets Disposal Corporation.**—This Corporation was established in 1944 as the War Assets Corporation under the Surplus Crown Assets Act (RSC 1970, c. S-20) and is subject to the Financial Administration Act (RSC 1970, c. F-10). It replaced the War Assets Corporation Limited which had been incorporated in 1943 and its name was changed to Crown Assets Disposal Corporation in 1949. The Corporation is responsible for the sale of Federal Government surplus real estate and commodities located in Canada and at Canadian Government establishments throughout the world. It also acts as agent on behalf of foreign governments in selling their surplus assets located in Canada and has reciprocal agreements with a number of European countries for marketing Canadian surplus assets located in their respective countries. The Corporation is responsible to Parliament through the Minister of Supply and Services.

**Defence Construction (1951) Limited.**—Defence Construction (1951) Limited, reporting to the Minister of National Defence, is the Crown agency that procures for the Department of National Defence the construction and repair of buildings, structures and engineering works and professional engineering and architectural services.

The forerunner of the present company, Defence Construction Limited, began operation in November 1950 as a Crown agency responsible for awarding and supervising defence construction projects. Defence Construction (1951) Limited, incorporated July 12, 1951, under authority of the Defence Production Act, took over the responsibilities of the former agency.

The company's prime responsibility in contracting for all new construction and repair and renovation projects (except contracts under \$10,000 which are arranged for the Department of National Defence via the Department of Supply and Services) includes: participation in preparation of design; calling and reviewing of tenders; award and administration of contracts; supervision of construction work; and certification of progress claims for work completed. Activities cover four distinct spheres: defence projects in Canada for the Department of National Defence; all defence projects in Europe for the Department of National Defence under the North Atlantic Treaty Organization Agreement; defence construction for the United States Government in Canada; and, by arrangement, acting as the contract agents or technical advisers on the rendering of assistance to other federal departments and agencies.

The head office of the agency is located at Ottawa and branch offices are maintained at Halifax, Montreal, Toronto, Winnipeg and Vancouver in Canada and in Lahr, Germany.

**Director of Soldier Settlement and Director of the Veterans' Land Act.**—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

**Eastern Rockies Forest Conservation Board.**—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. Its function is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the Federal and Alberta Governments, are co-ordinated by an officer of the federal Department of the Environment.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of the Environment.

**Economic Council of Canada.**—This corporation, established under legislation passed on Aug. 2, 1963 (RSC 1970, c. E-1), consists of a full-time chairman and two full-time directors appointed for a term not to exceed seven years and not more than 25 additional members to serve part-time and without remuneration. The Council is to be as representative as possible of labour, agriculture and primary industries, secondary industry and commerce, and the general public. Its functions are to advise and recommend measures that will achieve in Canada the highest possible levels of employment and efficient production so that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity; and to publish an annual review of medium- and long-term economic prospects and problems. The Council reports to Parliament through the Prime Minister.

**Eldorado Aviation Limited.**—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Nuclear Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Energy, Mines and Resources.

**Eldorado Nuclear Limited.**—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted in June 1952 and the name changed in 1968), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Energy, Mines and Resources.

**Export Development Corporation.**—This Corporation, under authority of the Export Development Act (RSC 1970, c. E-18), succeeded the 25-year-old Export Credits Insurance Corporation on Oct. 1, 1969. Its purpose is to facilitate the development of Canada's export trade by the provision of expanded insurance, guarantee, loan and other financial facilities which enable Canadian firms to meet international credit competition. It reports to Parliament through the Minister of Industry,

Trade and Commerce. Its affairs are administered by a 12-man board of directors. The chairman and six other directors are appointed from among persons employed in the Public Service of Canada, the remaining five from private business. The Corporation's functions are: to insure Canadian exporters against non-payment by foreign buyers due to credit or political risks over which neither buyer nor seller has any control; to issue guarantees to persons in respect of the financing of exports; to make loans to foreign buyers or to issue guarantees in respect of the purchase of capital goods or major services from Canada involving extended credit terms; and to insure Canadian investments abroad against non-commercial risks such as war or revolution, expropriation or confiscation, or the inability to repatriate capital or earnings.

**Farm Credit Corporation.**—This Corporation was established on Oct. 5, 1959 (RSC 1970, c. F-2) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation also administers the Farm Syndicates Credit Act and is responsible to Parliament through the Minister of Agriculture.

**Fisheries Prices Support Board.**—The Board was set up under the Fisheries Prices Support Act of 1944 (RSC 1970, c. F-23) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of the Environment and consists of a chairman, who is a senior officer of the Department and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fish products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

**Freshwater Fish Marketing Corporation.**—This Corporation was established under the Freshwater Fish Marketing Act (RSC 1970, c. F-13) which received Royal Assent on Feb. 27, 1969, and given the function of marketing and trading in fish, fish products and fish byproducts in and out of Canada with the objective of ensuring more orderly marketing for the benefit of the whole fishery and achieving higher and more stable prices for the catch. The Corporation received a grant for initial operating and establishment expenses but conducts its operations on a self-sustaining basis without parliamentary appropriations; it is financed by bank loans with government guarantee of repayment or by direct loans. The Corporation consists of a board of directors composed of a chairman, a president, one director for each participating province and four other directors appointed by the Governor in Council for a term not exceeding five years. The Corporation reports to Parliament through the Minister of the Environment.

**Industrial Development Bank.**—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to supplement the activities of other lenders with particular consideration to the financing problems of small enterprises.

**Medical Research Council.**—Established in 1969 and operating under authority of RSC 1970, c. M-9, the Council is an autonomous agency of the Federal Government. It is composed of a president, a vice-president, and 20 members. The primary aim of the Council is the support and development of research in the health sciences in Canadian universities and affiliated institutions. It reports to Parliament through the Minister of National Health and Welfare.

**National Arts Centre Corporation.**—The Act establishing this Corporation (RSC 1970, c. N-2) was assented to July 15, 1966. The Corporation consists of a Board of Trustees composed of a chairman, a vice-chairman, the Mayors of Ottawa and Hull, the Director of the Canada Council, the President of the Canadian Broadcasting Corporation, the Government Film Commissioner and nine other members appointed by the Governor in Council for terms not exceeding three years, except for the first appointees whose terms range from two to four years. The objects of the Corporation are to operate and maintain the National Arts Centre, to develop the performing arts in the National Capital Region and to assist the Canada Council in the development of the performing arts elsewhere in Canada. The Corporation reports to Parliament through the Secretary of State.

**National Battlefields Commission.**—This Commission was established by Act of Parliament in 1908 to preserve the Historic Battlefields at Quebec City. The Commission is composed of nine members, seven appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by annual appropriations of the Federal Government and is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

**National Capital Commission.**—This Commission, successor to the Federal District Commission, is a Crown agency created by the National Capital Act (RSC 1970, c. N-3), proclaimed Feb. 6, 1959. Headed by a chairman, it is made up of 20 members, representing the 10 provinces of Canada, and its work force fluctuates between 600 and 850, depending on the season.

The Commission is responsible for the acquisition, development and maintenance of public lands in the National Capital Region; it co-operates with municipalities by providing planning aid or financial assistance in municipal projects of benefit to the region; and advises the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament through the Minister of State for Urban Affairs.

**National Harbours Board.**—The Board was established by Act of Parliament in 1936 (RSC 1970, c. N-8). It is responsible for the administration of port facilities at the harbours of St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois-Rivières and Montreal, Que.; Vancouver, B.C.; and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

**National Museums of Canada.**—The National Museums of Canada is a departmental Crown corporation established Apr. 1, 1968, by the National Museums Act (RSC 1970, c. N-12). The corporation was established to join under one administration the four existing museum activities: the National Gallery of Canada; the National Museum of Man (including the Canadian War Museum); the National Museum of Natural Sciences; and the National Museum of Science and Technology (including the National Aeronautical Collection). The corporation reports to Parliament through the Secretary of State.

The Board of Trustees is composed of the Director of the Canada Council, the President of the National Research Council, and 10 other members. All members of the Board are appointed by the Governor in Council for fixed terms of office.

The purposes of the corporation, according to the Act, are "to demonstrate the products of nature and the works of man, with special but not exclusive reference to Canada, so as to promote interest therein throughout Canada and to disseminate knowledge thereof". To these ends the corporation is empowered to: (a) collect, classify, preserve and display objects relevant to its purposes; (b) undertake or sponsor research relevant to its purposes; (c) arrange for and sponsor travelling exhibitions of materials in, or related to, its collections; (d) arrange for the publication or acquisition and the sale to the public of books, pamphlets, replicas and other materials related to its purposes; (e) undertake or sponsor programs for the training of persons in the professions and skills involved in the operation of museums; (f) arrange for or provide professional and technical services to other organizations whose purposes are similar to any of those of the corporation on such terms and conditions as may be approved by the Minister; and (g) generally, do and authorize such things as are incidental or conducive to the attainment of the purposes of the corporation and the exercise of its powers.

**National Research Council of Canada.**—This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian university and industrial laboratories; sponsors associate committees co-ordinating research on specific problems of national interest; and develops and maintains the nation's primary physical standards. The Federal Government has designated NRC as the co-ordinating body for the further development of a national scientific and technical information system (STI), under the general direction of the National Librarian. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited. The National Research Council consists of a president, three vice-presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the National Research Council Act (RSC 1970, c. N-14) and reports to Parliament through a designated Minister, at present the President of the Treasury Board.

**Northern Canada Power Commission.**—The Commission was established by Act of Parliament in 1948 (RSC 1970, c. N-21) to provide power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give the Commission authority to provide similar services in the Yukon Territory. The name of the Commission (formerly the Northwest Territories Power Commission) was changed in 1956. It is composed of the Deputy Minister of Indian Affairs and Northern Development, who is chairman, and two members appointed by the Governor in Council and reports to Parliament through the Minister of Indian Affairs and Northern Development.

The Commission operates three hydro-electric plants in the Northwest Territories (two on the Snare River near Yellowknife and one on the Taltson River near Fort Smith) and two hydro plants in the Yukon Territory (one on the Yukon River at Whitehorse and the other on the Mayo River near Mayo). Diesel-electric plants and distribution systems are operated at Fort Smith, Fort Simpson, Fort Resolution, Fort McPherson, Fort Good Hope, Norman Wells, Baker Lake, Chesterfield Inlet and Cambridge Bay, N.W.T., at Dawson, Y.T., and at Field, B.C.; diesel-electric power and central heating plants at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont.; and water supply and sewerage systems at Inuvik and Moose Factory. The Commission also operates, on behalf of the Government of the Northwest Territories, the diesel-electric plant at Aklavik, and heating plants and domestic water supply and sewerage systems at Fort McPherson and Fort Simpson. In the City of Dawson, the Commission operates the domestic water and sewerage system on behalf of the Government of the Yukon Territory.

**Northern Transportation Company Limited.**—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Nuclear Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed and the western Arctic. The Company is responsible to Parliament through the Minister of Transport.

**Polymer Corporation Limited.**—This Corporation was incorporated in 1942 by Letters Patent and is subject to the Government Companies Operation Act (RSC 1970, c. G-7) and the Financial Administration Act (RSC 1970, c. F-10). Its head office and main plant are located at Sarnia, Ont., where it produces synthetic rubbers, latexes, resins and related products. A subsidiary operation for the production of butyl is located in Belgium, and another subsidiary in France is responsible for production of general purpose and specialty rubbers for the European market. An international marketing subsidiary is located in Switzerland. The Company reports to Parliament through the Minister of Supply and Services.

**Royal Canadian Mint.**—The Royal Canadian Mint has been in operation since 1908. It was first established as a branch of the Royal Mint under the (Imperial) Coinage Act of 1870, and opened on Jan. 2, 1908. On Dec. 1, 1931, it became the Royal Canadian Mint and operated as a branch of the Department of Finance. In 1969, the Mint became a Crown agency corporation, reporting to Parliament through the Minister of Supply and Services. It operates under authority of RSC 1970, c. R-8.

The latter change was made to provide for a more industrial type of organization and for flexibility in producing coins of Canada and other countries; buying, selling, melting, assaying and refining gold and other precious metals; and producing medals, plaques and other devices. The Mint has a seven-man board of directors appointed by the Governor in Council—the Master of the Mint who is its chief executive officer appointed to serve during pleasure, the Chairman who is appointed for a four-year period, subject to re-appointment, and five other Directors, two from inside and three from outside the Public Service, who are appointed for terms of three years. The Mint now operates basically as a manufacturing enterprise, with the object of making a small profit. Financial requirements are provided through loans from the Consolidated Revenue Fund.

**Science Council of Canada.**—The Science Council of Canada was established in 1966 (RSC 1970, c. S-5) and became a Crown corporation on Apr. 1, 1969. The Council consists of 25 members each having a specialized interest in science or technology and four associate members chosen from among officers or employees of the Federal Government. Members hold office for terms of not more than three years and associate members hold office during pleasure. All are appointed by the Governor in Council. The duties of the Science Council are to assess in a comprehensive manner Canada's scientific and technological resources, requirements and potentialities and to make recommendations thereon. The Council reports to Parliament through a designated Minister, at present the Prime Minister.

**St. Lawrence Seaway Authority.**—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1970, c. S-1) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Crown corporation, Seaway International Bridge Corporation Limited, is subsidiary to the St. Lawrence Seaway Authority. The Authority is composed of a president, a vice president and a member, and reports to Parliament through the Minister of Transport.

**Unemployment Insurance Commission.**—The Commission was established under the provisions of the Unemployment Insurance Act, 1940 (RSC 1970, c. U-2); the Act was revised in 1955 and again in 1971. It administers the Unemployment Insurance Act and performs other duties which the Minister of Labour may require.

The function of the Commission is to provide employees with insurance and, subject to regulations, make weekly payments to them for a limited time during periods of unemployment. Under the 1971 legislation, about 1,200,000 more people are covered; only eight weeks of insured employment are required to qualify for some benefits; and under certain conditions an interruption of earnings caused by sickness or maternity can be covered. There is a minimum benefit rate of \$20 and a maximum benefit rate of \$100 weekly. Services of the Commission were also expanded to include a Claimant Assistance Program to help people become re-employed.

Three commissioners, consisting of the Chairman who is Chief Executive Officer, one Commissioner representing employees and one representing employers, operate the Commission. It functions at three levels—head office in Ottawa, five regional offices and a number of district and other offices across the country. The Commission reports to Parliament through the Minister of Labour.

## PART IV.—FEDERAL AND PROVINCIAL GOVERNMENT EMPLOYMENT

### Federal Government Employment

The Treasury Board (a statutory Committee of Cabinet) has over-all responsibility for personnel management in the federal Public Service. Its role is to develop and ensure the application of personnel policies, systems and methods in order that the human resources needed to carry out programs effectively are obtained at competitive prices and used efficiently with due regard for the individual and collective rights of employees.

The Public Service Commission (an independent agency responsible directly to Parliament) ensures that staffing requirements of departments and agencies are met in accordance with the merit principle, operates staff development and training programs, including language training, and establishes appeal boards to hear and render decisions on appeals that employees have a right to lodge pursuant to the Public Service Employment Act.

**Treasury Board.**—Under provisions of the amended Financial Administration Act and the Public Service Staff Relations Act, both proclaimed on Mar. 13, 1967, the Treasury Board is responsible for the development of personnel policies, regulations, standards and programs in the areas of classification and pay, conditions of employment, collective bargaining and staff relations, bilingualism, organization and establishments, manpower training, development and utilization, pensions, insurance and other employee benefits.

**Manpower.**—The Treasury Board is concerned with the development, implementation, maintenance and evaluation of policies, programs and procedures for the accurate determination, allocation, development and efficient utilization of employees needed in the Public Service to carry out programs effectively. These measures are aimed at improving the effective use of manpower resources in the Public Service and include recommendations on organization development, manpower planning, the determination and evaluation of training needs and educational programs, and advice to departments and agencies on the design and implementation of systems to achieve improvements in manpower management.

**Classification.**—The Treasury Board develops and maintains classification systems and standards for the 73 occupational groups into which the Public Service is divided. Classification standards contain criteria for measuring the relative value of jobs within groups of positions with like functions. One of the objectives of the classification system is the extensive delegation of authority to departments to classify positions in order to strengthen the management process in departments and contribute to accurate and expeditious classification decisions. Historically, both the responsibility for and the actual administration of classification has been done by central agencies but, under a program of progressive delegation, the Treasury Board has granted authority to most departments to classify most of their own positions without reference to the Board Secretariat. The Board retains authority for the classification of jobs in key areas and, through its staff, provides classification services to small departments and agencies, monitors and audits the work of departments with delegated authority and responds to classification grievances and challenges.

**Compensation.**—The Treasury Board develops, administers and monitors policies governing compensation and conditions of service for the Public Service, the Canadian Armed Forces and the Royal Canadian Mounted Police. It is the principal source of technical advice required in the bargaining process with respect to Public Service employees covered by collective bargaining and is directly responsible for policy on compensation and conditions of employment for those excluded from the collective bargaining system. The compensation policies developed apply to federal employees in Canada as well as to those in foreign countries and embrace all forms of payment made in return for services rendered, including pay, leave and allowances.

*Staff Relations.*—Under the system of collective bargaining established by the Public Service Staff Relations Act, Treasury Board is the employer for all employees in the Public Service, with the exception of a number of "separate employers", such as the National Research Council, the Defence Research Board and the National Film Board. The Treasury Board determines policies designed to promote good relations between the Government and its employees, negotiates collective agreements and co-ordinates consultations with the various certified bargaining agents, and administers the terms of the agreements which have not been delegated to departments. These policies, developed in relation to conditions of service, include the setting of appropriate standards for physical working conditions and occupational health and safety.

Much of the administration of agreements is delegated and in such cases the Board provides interpretations and advice to departments as required. The Treasury Board prepares and presents the employer's position on grievances that are referred to adjudication, and gives advice and assistance to departmental management at preceding stages in the grievance process. The Board presents the employer position concerning applications for certification by employee organizations and deals with the Public Service Staff Relations Board on the exclusion of employees from bargaining units.

*Pensions and Insurance.*—The Board develops policies, co-ordinates the administration and recommends periodic revision of pension programs for the Public Service, and negotiates reciprocal pension transfer agreements with outside employers. It also studies and proposes means of ensuring compatibility between Public Service employee benefits and medicare and other social security programs, and makes recommendations on the development and monitoring of Public Service income protection programs.

*Bilingualism.*—The Treasury Board Secretariat has over-all responsibility for the development of policy guidelines concerning implementation of the Government's bilingualism objectives within the Public Service, and for overseeing that activities by government departments and agencies in this area are consistent with stated policy. The Board also issues policy guidelines to deputy heads of departments to assist them in identifying bilingual positions within their organizations and to prescribe the linguistic requirements of such positions.

**Public Service Commission.**—The Public Service Employment Act, which became effective on Mar. 13, 1967, continues the status of the Public Service Commission as an independent agency responsible to Parliament. The Commission has the exclusive right and authority to make appointments to and from within the Public Service. The Commission is also empowered to operate staff development and training programs and to assist deputy heads in the carrying out of training and development.

It may establish boards to render decisions on appeals against appointments made from within the Public Service and against release or demotion for incompetence or incapacity, to make recommendations on the revocation of appointments improperly made under delegated authority and to render decisions on allegations of political partisanship.

The Commission may also approve leave of absence for public servants who wish to be candidates in federal or provincial elections and conduct investigations of allegations regarding improper political activities of public servants.

The Act authorizes the Commission to delegate to deputy heads any of its powers, except those relating to appeals and inquiries. The Commission has delegated its powers to make appointments in the Operational and Administrative Support Categories, with employing departments being required to use the Canada Manpower Centres as their recruitment agency in the case of appointment of people from outside the Public Service. Delegations of appointing authority in the Administrative and Foreign Service, Technical, and Scientific and Professional Categories have been made on a restricted basis. The Commission operates a monitoring program designed to ensure that appointments made under delegated authority comply with the law and with Commission policies.

*Staffing.*—The Public Service Commission performs its important role as guardian of the merit principle while ensuring the high quality of people within the Service, adequate representation of the two official language groups, a bilingual capability to the extent prescribed by the Government, equal employment and career development opportunities irrespective of sex, race, national origin, colour or religion, and encouragement of opportunities for disadvantaged people.

Every citizen has the opportunity of competing for positions in the service of his country. Competitive examinations are announced through the press and other news media and through posters displayed on public notice boards of the large post offices, offices of the Canada Manpower Centres, offices of the Public Service Commission and elsewhere.

The Commission's major task—staffing the Public Service according to merit—is done on an occupational basis. This is consistent with the classification system which divides the Service into six broad occupational categories which are further divided into groups of occupationally similar jobs. For each major occupation or group of occupations there is a program of recruitment, selection and placement. Comprehensive manpower planning, developed in co-operation with the Treasury Board and employing departments, has been introduced for several occupational groups. Continuous recruitment techniques, utilizing candidate inventories, have been developed and are utilized when appropriate.

Appointments are made from within the Service except where the Commission believes it is in the best interests of the Service to do otherwise. Appointments from within the Service are made either through a formal competition or from an employee inventory. "Data stream", the Commission's computerized manpower inventory, is the primary employee inventory for the Executive, Scientific and Professional, Technical and the Administrative and Foreign Service Categories.

*Language-training courses are provided by the Public Service Commission to meet the Federal Government's goal of creating a functionally bilingual public service. A sophisticated audio-visual teaching method is used, developed after intensive research, which is directed specifically to the needs of the Canadian public servant. The operation trains about 9,000 students a year and employs 400 language teachers.*

*Appeals.*—Under the Act, public servants who are candidates in a competition open to all or part of the Service may appeal the selections made as a result of the competition to the Public Service Commission. When a promotion is made without competition, those who would have been eligible to apply if a competition had been held may appeal. Public Servants may also appeal the decision of a Deputy Head to recommend release or demotion because of incompetence or incapacity.

*Training and Development.*—Consistent with the growing emphasis on managerial development and continuing education, the Public Service Commission offers interdepartmental courses in government administration, occupational training and management improvement. The Commission acts as the consultant and adviser to Deputy Heads on training matters and the training and development facilities of the Commission are available to employees to train them for specific occupations or for promotion within the administrative and managerial ranks.

*Bilingualism.*—In making appointments, the Commission ensures that employees are qualified in the knowledge and use of the English or French language or both, in order that departments may perform their functions effectively and that service can be provided to the public.

*Language Testing and Training.*—The Commission exercises specific responsibilities in the areas of language training, research, and the development of selection standards with regard to the linguistic requirements of positions and groups of positions within the federal Public Service. It must establish the degree of language knowledge or proficiency possessed by candidates for positions and establish the method of assessing the language knowledge of such candidates. The formulation of appropriate selection standards is to accord with the decisions of the individual Deputy Heads with respect to the linguistic requirements of positions and groups of positions.

### Statistics of Federal Government Employment\*

The current survey of Federal Government employment, introduced in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Canadian Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departments and departmental corporations, and (2) agency corporations, proprietary corporations and other agencies and corporations. Table 1 combines the two groups and Tables 2 to 4 cover employees in the first category; only totals are available for employees in the second category, as given on p. 170.

**Departments and Departmental Corporations.**—The salaries of employees in this category are paid from the Consolidated Revenue Fund. In earlier issues of the Year Book, employment data were provided under the categories "salaried", "prevailing rate", "ships' officers and crews", and "casuals and others". Effective Apr. 1, 1969, a system of identifying employees by occupational categories was adopted by the Federal Government. Definitions of the occupational categories are as follows:—

- (1) *Executive Category* is composed of occupational groups engaged in the development of government policy, the direction of government programs and related functions in which there is a requirement for exceptional ability in utilizing resources or in initiating or modifying administrative functions.
- (2) *Scientific and Professional Category* is composed of occupational groups engaged in the application of a comprehensive body of knowledge acquired through university graduation in fields specified in group definitions, and of professional groups in which membership in Canada is generally controlled by legally established licensing bodies. Some fields included within this occupational category are auditing, biological sciences, dentistry, economics, sociology and statistics, engineering and land survey.

\* Prepared in the Governments Division, Financial Statistics Branch, Statistics Canada.

- (3) *Administrative and Foreign Service Category* is composed of occupational groups engaged in the planning, execution, conduct and control of programs serving the public interest, the political and economic relations between Canada and other countries, and the requirements of internal management in the Public Service of Canada.
- (4) *Technical Category* is composed of occupational groups engaged in the conduct of analytical, experimental and investigative duties in the natural, physical and social sciences, in the preparation, inspection and measurement of biological, chemical and physical substances and materials, in the design, construction, inspection, operation and maintenance of complex equipment, systems and processes, and in the performance of similar technical duties.
- (5) *Administrative Support Category* is composed of occupational groups engaged in the preparation, transcribing, transmitting, systematizing and maintenance of records, reports and communications of manual processes, or by operating various machines and equipment, as in the direct application of rules and regulations.
- (6) *Operational Category* is composed of occupational groups engaged in the performance of a craft or of unskilled work in the fabrication, maintenance and repair activities, in the operation of machines, equipment and vehicles, and in the provision of postal, protective, correctional, personal or domestic services.
- (7) *Casual and Others Category* is composed of all employees in departments and departmental corporations of the Government of Canada who are not defined as in executive, scientific and professional, administrative and foreign service, technical, administrative support or operational categories.

Because Statistics Canada is precluded from publishing data that might permit the identification of individuals, it has been necessary to combine the data for the executive category with those for the scientific and professional category and also to combine the data relating to employment outside Canada with those for the Yukon and Northwest Territories.

<sup>1</sup> Excludes payments to the Governor General and Lieutenant-Governors amounting to \$57,566; Judges \$2,700,249; and Ministers of the Crown (including the Prime Minister, Speakers of the Senate and the House of Commons, Deputy Speaker of the House of Commons and Parliamentary Secretaries) \$128,997.

Table 4 presents statistics for departments and departmental corporations on the basis of a classification by function. The purpose of such classification is to provide a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

To ensure that individuals are not identifiable, it has been necessary to eliminate from this table the sub-functions shown in previous editions of the Year Book. Quarterly data on both the functional and departmental bases are available in the Statistics Canada publication *Federal Government Employment* (Cat. No. 72-004).

**Agency Corporations, Proprietary Corporations and Other Agencies and Corporations.**—The following organizations owned by the Federal Government as at Dec. 31, 1970 are included under this heading. Their employees at that date numbered 135,980 and their payrolls for the quarter ended Dec. 31, 1970 amounted to \$304,330,000. A provincial distribution of employees and a summary of the total payroll in each of the three groups are given in Table 1.

#### Agency Corporations

Atomic Energy of Canada Limited  
Canadian Arsenal Limited  
Canadian Dairy Commission  
Canadian Film Development Corporation  
Canadian Livestock Feed Board  
Company of Young Canadians  
Crown Assets Disposal Corporation

Defence Construction (1951) Limited  
National Battlefields Commission  
National Capital Commission  
National Harbours Board  
Northern Canada Power Commission  
Royal Canadian Mint

#### Proprietary Corporations

Air Canada  
Canada Deposit Insurance Corporation  
Canadian Broadcasting Corporation  
Canadian National Railways  
Canadian Overseas Telecommunications Corporation  
Cape Breton Development Corporation  
Central Mortgage and Housing Corporation  
Eldorado Aviation Limited

Eldorado Nuclear Limited  
Export Development Corporation  
Farm Credit Corporation  
Freshwater Fish Marketing Corporation  
Northern Transportation Company Limited  
Polymer Corporation Limited  
St. Lawrence Seaway Authority  
Seaway International Bridge Corporation Limited

#### Other Agencies and Corporations

Bank of Canada  
Canada Council  
Canadian Government Elevators  
Canadian Wheat Board

Industrial Development Bank  
Office of the Custodian of Enemy Property  
National Arts Centre

### Provincial Government Employment

Table 5 shows the numbers of persons employed by the various provincial and territorial governments, with the exception of British Columbia, at the end of December 1970 and gross payrolls (including retroactive pay, salary adjustments and overtime) for the year 1970. The only data available for British Columbia are for employees of institutions of higher education; these are included in the body of the table but not in the totals, all of which are, of course, exclusive of that province.

Of the total 1970 provincial and territorial government payrolls of \$2,378,989,000 (excluding British Columbia), departmental services employees received 59.9 p.c., employees of institutions of higher education 11.0 p.c., employees of provincial government enterprises 27.9 p.c. and employees of workmen's compensation boards 1.2 p.c.

## PART V.—CANADA'S EXTERNAL RELATIONS\*

### Section 1.—Canada's International Status

The growth of Canada's international status is reflected in the development of the Department of External Affairs. From Confederation until 1914, Canada's position in the British Empire was essentially that of a self-governing colony, whose external relations were directed and controlled by the Imperial Government in Great Britain. Canada's first efforts concerning its own external relations, in the early 1900s, merely took the form of creating improved administrative machinery at home. In 1909, Parliament authorized the establishment of a "Department of External Affairs" placing it under the Secretary of State, with an Under-Secretary of State for External Affairs to rank as the permanent deputy head of the Department. The title of the Department indicated that it was to deal with Canada's relations with other governments within the British Empire as well as with foreign powers but its establishment brought no constitutional change. In 1912, the Department was placed directly under the Prime Minister who held the additional portfolio of Secretary of State for External Affairs and this situation obtained until 1946 when the first separate Secretary of State for External Affairs was appointed.

The Department began with a modest staff consisting of the Under-Secretary and six clerks. In 1912 an Assistant Under-Secretary was added, and in 1913 a Legal Adviser. Before the establishment of the Department, a High Commissioner had been appointed to represent Canada in London (from 1880) and an Agent-General in France (from 1882), and Canada, in the closing years of the nineteenth century, was also represented abroad by trade commissioners and immigration officials. However, none of these officials had diplomatic status. Negotiations with foreign countries were conducted through the British Foreign Office and dealings with other parts of the Empire through the Colonial Office, with Canadian representatives frequently included in negotiations. Canadian interests abroad were handled by British diplomatic and consular authorities and all Canadian communications to other governments were made through the Governor General.

The gradual recognition of Canadian autonomy in international affairs and the growth of Canadian responsibilities abroad made expansion of services and representation inevitable. After 1920, it became increasingly apparent that Canada's interests could no longer be conveniently handled by the British diplomatic and consular authorities and the Department began to develop into an agency for the direct administration of Canada's external affairs. In 1921, the Office of the High Commissioner in London was placed under its direct control. In 1925, a Canadian Advisory Officer was appointed in Geneva to represent Canada at various conferences and League of Nations Assemblies and to keep the Canadian Government informed of the activities of the League and of the International Labour Office. In 1927, a Canadian Minister was appointed to Washington.

An advance of the first importance in the Department's development came as a result of an agreement reached at the Imperial Conference of 1926 by which the Governor General ceased to represent the British Government and became solely the personal representative of the Sovereign. This brought about two changes: as the British Government was now without a representative in Canada, it appointed, in 1928, a High Commissioner to represent it at Ottawa; and after July 1, 1927, correspondence from the Dominions Office in London and from foreign governments was directed to the Secretary of State for External Affairs instead of to the Governor General.

In 1928, the former Agent-General in Paris was appointed Minister to France and, in 1929, a legation was opened in Tokyo. At about the same time, the United States, France and Japan opened legations in Ottawa. The expansion of the service was then interrupted by the depression of the 1930s and the next steps in the exchange of diplomatic representatives with other countries were taken when Belgium sent a Minister to Ottawa in 1937 and Canada, in 1939, established legations in Belgium and the Netherlands.

\* Prepared (November 1971) by the Department of External Affairs, Ottawa.

With the outbreak of the Second World War, it became imperative that Canada have closer and more direct contact with other governments of the Commonwealth, with the Allied governments and with certain other foreign governments. The day after Canada's separate declaration of war on Sept. 10, 1939, it was announced that the Canadian Government would send High Commissioners to Australia, New Zealand, South Africa and Ireland, and these governments reciprocated. The appointment in 1941 of a High Commissioner to Newfoundland recognized the importance of that country to the defence of Canada. In 1942, by reciprocal agreement, Canada appointed Ministers to the Union of Soviet Socialist Republics and China. During the War, a single Canadian Minister was accredited to a number of Allied governments then functioning in London or Cairo—those of Belgium, the Netherlands, Czechoslovakia, Greece, Norway, Poland and Yugoslavia—and Canada received Ministers from each of these governments. After the liberation of France, this Minister, following a period in Algiers as representative to the French Committee of National Liberation, moved to Paris with the rank of Ambassador.

Another wartime development was the establishment of diplomatic relations with Latin America. In 1941, Canadian legations were opened in Brazil and the Argentine Republic (the Minister to the latter being also accredited in 1942 to Chile) and these countries sent their first Ministers to Ottawa. Diplomatic representatives were sent to Mexico and Peru in 1944 and to Cuba in 1945. Canada now has formal diplomatic relations with all 20 countries in Latin America and, because of developing ties with that area, a separate political division devoted to Latin America was set up in the Department in 1960.

Canada's external service continued to expand following the War. Embassies were opened in a number of countries and, after 1947, High Commissioners were accredited to India, Pakistan and Ceylon and subsequently to other countries which became Commonwealth members upon independence. In the 1960s, Canada also developed its diplomatic relations in the French-speaking world, particularly with the newly independent francophone States of Africa. Thus, relying on a system of multiple accreditation, Canada now has ambassadorial links with all of the 22 francophone African countries. The embassies are in Tunis, Algiers, Dakar, Abidjan, Yaounde and Kinshasa. The decision to establish diplomatic relations with the Holy See was taken in 1969. On Oct. 13, 1970, Canada established diplomatic relations with the People's Republic of China.

Membership in the United Nations has increased Canada's responsibilities outside its own borders and Canada has been represented on various organs of the UN since its formation in San Francisco in 1945. A Permanent Canadian Delegation was established in New York in 1948 and a year later a Canadian office was opened in Geneva, the European headquarters of the organization. These offices, now called Permanent Missions, have since been expanded. Canada was one of the founding members of the North Atlantic Treaty Organization in 1949 and has been active in the Organization throughout the years of its existence. In 1952, on the establishment of a NATO Permanent Council, a Canadian Permanent Delegation was set up in Paris (since moved to Brussels) to represent Canada's NATO interest. There is also in Paris a Canadian Permanent Delegation to the Organization for Economic Co-operation and Development. In addition to representing Canada on these permanent international bodies and their various committees, officials of the Department of External Affairs are members of Canadian delegations at many international conferences.

Today, Canada conducts diplomatic, consular and/or trade representation in 121 independent countries, details of which are contained in Section 2 which follows. Canada's main international activities from January 1970 to the end of March 1971 are reported in Section 3 of this Chapter. A brief review of the present functions and organization of the Department of External Affairs is given on pp. 142-143; a broader coverage may be found in the monthly bulletin *External Affairs* which is soon to be known as *International Perspectives* (Information Canada, Ottawa, \$2 per year) and in the Annual Report of the Department (Information Canada, Ottawa).

## Section 2.—Diplomatic and/or Consular Representation as at Aug. 17, 1971

### 1.—Canadian Representation Abroad

NOTE.—Changes in this listing subsequent to Aug. 17, 1971 and names of current representatives are given in *Canadian Representatives Abroad and Diplomatic Corps and Representatives of Other Countries in Canada*, published occasionally and obtainable from Information Canada, Ottawa.

Country and Year Representation Established	Present Status of Representative	Address
Afghanistan.....1968	*Ambassador	c/o Office of the High Commissioner for Canada, Hotel Shahrazad, Islamabad, West Pakistan. Postal address: P.O. Box 1042, GPO

**Federal-Provincial Aspects of Canada's International Relations.**—As a result of expanding provincial interests abroad and of the Federal Government's desire to develop more effective procedures to deal with them, machinery was established in 1967 within the Department of External Affairs to maintain close liaison with the provinces and to facilitate their international activities in a manner that would fully meet provincial objectives and at the same time be consistent with a unified Canadian foreign policy.

The Federal Government's position in this regard was outlined in the White Paper *Federalism and International Relations*, published early in 1968, in which it was emphasized that the Government was anxious to ensure that Canada's foreign relations would serve the best interests of all the provinces as well as those of the two major linguistic communities in Canada. Federal Government assistance to the provinces in this regard, therefore, is provided pursuant to a number of Government policies which include the continued promotion of national unity through an adequate projection internationally of Canada's distinct bilingual character, the preservation of Canada's international personality and the desirability of giving appropriate recognition to legitimate provincial interests beyond provincial borders.

In meeting some of these objectives, Canada participates in a variety of Francophone conferences, of particular interest to Quebec, New Brunswick, Ontario and Manitoba, where the Federal Government arranges and co-ordinates provincial participation of Canadian delegations to these conferences. In this connection, considerable attention was focused in 1970 on the founding conference, the Agence de coopération culturelle et technique, held at Niamey, Niger. At the annual general conference of the Agence, held in Canada in October 1971 and attended by over 200 delegates from the Francophone world, Quebec was admitted as a participating government to the institutions, activities and programs according to modalities worked out between the Government of Quebec and the Government of Canada.

Provincial participation in other international conferences and in the work of international organizations on a wide range of subjects, including human and civil rights, education, health, agriculture, labour and social defence, is assured by the inclusion on Canadian

delegations (where possible) of interested provincial officials, and by the canvassing of provincial governments (as appropriate) for their views on the positions and attitudes which Canada might adopt on these subjects internationally.

Other aspects of Canada's international relations that are of particular interest to the provinces include the promotion of trade, investment, new industries, immigration, tourism, cultural exchanges, environmental questions, science and technology, assistance to developing countries and bilateral and multilateral agreements.

The promotional activities of the provinces have led to an increasing number of provincial visitors to foreign countries, and the Federal Government, through the Department of External Affairs and Canada's network of Embassies and High Commissions abroad, has provided and continues to provide assistance to provincial premiers, ministers and officials in making necessary arrangements and appropriate appointments for their visits abroad. The Federal Government also assists in the co-ordination of visits of foreign personalities to provincial capitals.

With respect to Canada's program of assistance to developing countries, the Federal Government actively encourages wider federal-provincial consultation in order to ensure that specific aid projects initiated by the provinces are co-ordinated with the activities of the Canadian International Development Agency (CIDA) and with Canada's aid contribution as a whole.

Concerning the conclusion of treaties, conventions and other formal agreements between Canada and other countries, the Federal Government consults with the provinces regarding the ratification by Canada of all such agreements touching upon fields of provincial or joint federal-provincial jurisdiction. Such consultation is often undertaken before or in the negotiating stage of the treaties affecting them and provides the most effective means of harmonizing federal and provincial interests.

Prime Minister Trudeau  
visiting Singapore's  
Boys Town, a combined  
rehabilitation and educa-  
tional centre operated

\$100,000 from the  
Canadian International  
Development Agency  
has helped build a new  
des school with  
space for 600 boys.

## Section 3.—International Activities, 1970-71

### Subsection 1.—Canada and the Commonwealth

Over the years the Commonwealth has evolved significantly in size, shape and outlook from the compact and like-minded family of nations of predominantly European stock which first constituted the Commonwealth association at the time of the enactment of the Statute of Westminster in 1931. With its present membership of 31 sovereign states covering about one quarter of the earth's land surface, representing approximately 850,000,000 people of many races, colours, creeds and languages, and including both economically developed and developing countries as well as governments committed and uncommitted in the international power groupings, the Commonwealth more accurately reflects the world over which it spreads so widely. The interests of its members extend to all continents and the variety of issues demanding their attention has greatly increased during the decade of the 1960s and will undoubtedly continue in the 1970s.

Commonwealth members listed according to the year (if post-1931, noted in brackets) when membership was proclaimed are as follows: Britain; Canada; Australia; New Zealand; India (1947); Pakistan (1947); Ceylon (1948); Ghana (1957); Malaya (1957)\*; Nigeria (1960); Cyprus (1961); Sierra Leone (1961); Tanganyika (1961)†; Jamaica (1962); Trinidad and Tobago (1962); Uganda (1962); Kenya (1963); Malawi (1964); Malta (1964); Zambia (1964); The Gambia (1965); Singapore (1965)\*; Guyana (1966); Botswana (1966); Lesotho (1966); Barbados (1966); Mauritius (1968); Swaziland (1968); Tonga (1970); Western Samoa (1970); and Fiji (1970). Nauru, which became fully independent in 1968, has "special" membership in the Commonwealth which entitles it to all the advantages of membership except attendance at Prime Ministers' Conferences. Through their association with the United Kingdom, which remains responsible for Foreign Affairs and Defence, the six West Indies Associated States (Antigua, Dominica, Grenada, St. Kitts-Nevis-Anguilla, St. Lucia and St. Vincent) also have an appropriate relationship with the Commonwealth.

One important aspect of Canadian foreign policy has been continuing membership in the Commonwealth. Canada has supported the extension and development of a vigorous and effective Commonwealth capable of exerting a beneficial influence for international peace and progress. Commonwealth ties give Canada a special relationship with this group of nations which, despite the diversity of their backgrounds, share important common ideals and traditions. These ties are characterized in the main by a spirit of co-operation developed through consultation and a continuous exchange of views. These exchanges at many levels take place not only in Commonwealth capitals but also in other countries as well as at the United Nations and in other international gatherings.

The Commonwealth Secretariat was established by a 1965 decision of Prime Ministers and is located in Marlborough House in London. The first Secretary-General of the organization is Mr. Arnold Smith, a Canadian whose appointment has been extended for a second five-year term. The Secretariat has the responsibility of organizing and servicing official Commonwealth conferences; it facilitates the exchange of information between member countries and generally stands at the service of all Commonwealth governments as a visible symbol of the spirit of co-operation which animates the Commonwealth. Canada's contribution to the 1970-71 budget of the Secretariat was \$280,155, representing 18.8 p.c. of the total.

The single most important conference organized by the Secretariat is that of the Commonwealth Heads of Government; the latest was held in Singapore in January 1971.

\* When Singapore, Sarawak and Sabah joined the Federation in September 1963, Malaya became Malaysia; Singapore separated from Malaysia in August 1965 to become an independent republic.

† In early 1964, Tanganyika and Zanzibar joined to form the United Republic of Tanzania.

Meetings arranged by the Secretariat in 1970-71 included the Fifth Commonwealth Education Conference held in Australia in February 1971, the annual meeting of Commonwealth Finance Ministers and Senior Finance Officials in Cyprus in September 1970, and a number of special or regional meetings including the Caribbean Regional Seminar on Youth held in Trinidad and Tobago in August 1970. Immediately prior to the 1970 World Health Assembly Meeting held in Geneva, Commonwealth representatives in attendance met to discuss plans for the Commonwealth Medical Conference to be held in Mauritius in November 1971.

Commonwealth developing countries continued to receive considerable amounts of Canadian assistance. Canada's total allocated contribution under the Colombo Plan from its inception in 1951 to March 1971 was approximately \$1,371,000,000 (see pp. 199-200). Canadian allocations to Commonwealth countries in Africa through SCAAP amounted to more than \$179,000,000 for the period from 1960 to March 1971, and approximately \$128,000,000 was allocated to Commonwealth Caribbean countries from 1958 to March 1971.

Canada is an active participant in the Commonwealth Scholarship and Fellowship Plan which has been administered in this country by the Association of Universities and Colleges of Canada since 1969. Canada also supports the training and provision of teachers for service in Commonwealth countries and assists in plans for co-operation in technical education.

### Subsection 2.—Francophonie

Heir to the great traditions of the French language and culture, Canada contributes fully to the establishment of special links between francophone countries. Its bilateral relations with France have developed greatly in recent years through political consultations, parliamentary visits, cultural and scientific exchanges, increased trade, officer exchanges, defence production co-operation, and the like. Links with other French-speaking countries have also been strengthened by the establishment of diplomatic missions and developing exchanges in a number of fields. A growing proportion of Canadian economic aid has been directed to francophone countries in Africa. Canada has played an active role in developing multilateral co-operation between French-speaking countries, a policy based on the recognition of the value to Canada of its ties with a multi-racial community of some 30 countries with 150,000,000 inhabitants, linked together by French culture. In keeping with this policy, Canada is a founding member of the Agence de coopération culturelle et technique which came into being as a result of the conference of the wholly or partly French-speaking states of the world held at Niamey, capital of the Republic of Niger, in March 1970. Canada is also a member of the Conference of Education Ministers of the Francophone States of Africa and Madagascar. Likewise, Canada is a founding member of the Conference of the Youth and Sports Ministers of Francophone Africa and Madagascar which came into being in Paris in December 1969. Canadian participation is on the basis of full federal co-operation with the provinces interested in these organizations.

### Subsection 3.—Canada and the United Nations

Firm support for the United Nations is an essential element of Canadian foreign policy. Canada has contributed over the years to the efforts of the organization to keep the peace in various parts of the world, including the Middle East, Kashmir, the Congo, West Irian and Cyprus. In the 1956 Middle East crisis, Canada played a significant role in the establishment of the United Nations Emergency Force and participated in the Force until its withdrawal in 1967. In 1960, Canada responded to a UN request for support of its operations in the Congo by supplying military and civilian specialists and by pledging political and financial support. In 1962, Canada provided aircraft, pilots and maintenance crews to assist the United Nations Temporary Executive Authority (UNTEA) in the exercise of its peacekeeping functions in West Irian. Canada maintains a large contingent in Cyprus (UNFICYP) to assist the UN to prevent open fighting between the Greek and Turkish

communities. Canada has consistently advocated the strengthening of the peace-keeping capacity of the UN by means of advance planning at UN headquarters and advance cost-sharing arrangements and has taken steps to improve the readiness of its own forces and urged that others be invited to do the same. Despite slow progress and occasional setbacks, Canada continues to believe that the UN has an important role to play in the maintenance of international peace and security.

Canada also participates directly in the work of the UN through its membership in various UN bodies including all of the 13 specialized agencies and the International Atomic Energy Agency. The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only specialized agency of the UN with headquarters in Canada.

While not at present a member of the Economic and Social Council, Canada does hold membership on many of its most important sub-bodies, including the Economic Commission for Latin America, the Commission on Narcotic Drugs, the Commission for Social Development, the Commission on the Status of Women, the Subcommission on the Prevention of Discrimination and Protection of Minorities of the Commission of Human Rights (a Canadian is a member in his personal capacity), the Advisory Committee on Application of Science and Technology to Development (ACAST), and the Committee on Natural Resources.

Canada serves on the Governing Council of the United Nations Development Programme (UNDP) and on the Executive Board of the United Nations Children's Fund (UNICEF); is a member of the Trade and Development Board of the United Nations Conference on Trade and Development (UNCTAD); is a member of the Executive Committee of the Office of the United Nations High Commissioner for Refugees (since the Second World War, Canada has received approximately 350,000 refugees from overseas); and is a member of two of UNCTAD's four main committees—the Committee on Manufactures and the Committee on Invisibles and Financing Relating to Trade.

Canada belongs to 18 subsidiary or *ad hoc* bodies of the General Assembly, including the Committee on the Peaceful Uses of Outer Space, the Disarmament Commission, the Special Committee on Peacekeeping Operations and the United Nations Scientific Committee on the Effects of Atomic Radiation, the Board of Auditors, the United Nations Scientific Advisory Committee, the Conference of the Committee on Disarmament, the Special Committee on the Rationalization of the Procedures and Organization of the General Assembly, and the Committee on the Peaceful Uses of the Sea-Bed and Ocean Floor beyond the limits of National Jurisdiction. Canada is also a member of the Preparatory Committee for the United Nations Conference on the Human Environment which will be held in Stockholm in the fall of 1972. Canada maintains Permanent Missions at both UN headquarters in New York and at the European Office of the organization in Geneva.

Canada pays 3.08 p.c. of the organization's regular budget, and is the eighth largest contributor. In the UN financial year 1971, Canada's share of the net expenditures of about \$160,000,000 was approximately \$4,900,000. The cost to Canada of maintaining its contingent in Cyprus was about \$1,800,000 in 1970-71. In addition, Canada makes voluntary contributions to special UN programs such as the United Nations Development Programme (UNDP), the United Nations High Commissioner for Refugees (UNHCR), the United Nations Children's Fund (UNICEF), the United Nations Relief and Works Agency in the Middle East (UNRWA) and the World Food Programme (WFP).

Canada's total assessment and contributions to the UN, its specialized agencies and related bodies totalled approximately \$510,000,000 during the period 1945-71 and about \$50,000,000 in 1970-71. The Canadian subscription to the World Bank now totals \$856,000,000 or 3.43 p.c. of the total. The International Development Association, which is an affiliate of the World Bank, has received from Canada interest-free contributions or pledges which, since its inception, amount to \$167,000,000, including a recent replenishment of \$36,000,000. The International Finance Corporation, also a member of the World Bank group, has a total paid-in capital of about \$107,000,000 out of which the Canadian subscription amounts to \$3,600,000.

**Canadian Financial Contributions to the United Nations.**—In 1970-71, Canada's contributions to the United Nations system were as follows:—

<sup>1</sup> Estimated. This figure from April 1970 to March 1971 represents the cost to Canada of maintaining its contingent in Cyprus after reimbursement for certain expenses by the United Nations; it does not include salaries and similar costs that Canada would have had to pay if the personnel had remained in Canada. <sup>2</sup> This allocation to the Fund is a payment, not a disbursement.

**Specialized Agencies.**—Canada is a member of each of the 13 specialized agencies of the UN, and also of the International Atomic Energy Agency (IAEA), an autonomous international organizations under the aegis of the UN. These agencies are invested with wide international responsibilities established by intergovernmental agreement, and act in relationship with the UN to assist in carrying out the terms of the Charter. Co-ordination of activities of the agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. This Committee is composed of the Secretary General of the UN, the executive heads of the specialized agencies, the Director General of the IAEA and other high officials of the UN. It considers common administrative questions, inter-agency program co-ordination and projects or problems of special urgency to be undertaken jointly by several agencies.

**International Labour Organization.**—The International Labour Organization (ILO) was originally established with the League of Nations in 1919 and became a specialized

agency of the UN in 1946. It brings together representatives of governments, employers and workers from 121 (1970) member states in an attempt to promote social justice by improving living and working conditions in all parts of the world. The ILO is responsible for a number of technical programs financed by the United Nations Development Programme, as well as training programs under its regular budget. It holds numerous meetings during the year as well as a conference in Geneva each June.

*Food and Agriculture Organization.*—The Food and Agriculture Organization (FAO) celebrated its 25th anniversary in 1970. The First Conference was held in 1945 in Quebec. It is one of the largest of the specialized agencies, now having 125 members. Among its objectives are the raising of levels of nutrition and living standards of its members, the improvement in the techniques of production and distribution of food and agricultural, fishery and forestry products as well as the improvement of the condition of rural populations. To this end, the FAO Secretariat provides services of common benefit to its member countries such as the provision of expert advice, the collection and publication of agricultural and fisheries statistics, the organization of international conferences and meetings of experts concerned with agricultural, forestry and fisheries problems.

The FAO Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference meets every other year. Its 16th meeting was held in November 1971 at Rome. FAO headquarters are in Rome and regional offices are located in Washington, Bangkok, Rio de Janeiro, Santiago and Cairo. Canada participates actively in FAO functions and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-committee on Surplus Disposals, the FAO Group on Grains, the North American Forestry Commission, the Commission on Fisheries and other FAO bodies.

The World Food Programme first began operations on a three-year experimental basis at the beginning of 1963 under the joint auspices of the FAO and the UN. At the end of 1965, it was decided that the progress achieved warranted its establishment on a regular and continuing basis for as long as multilateral aid was found to be possible and desirable. One of its aims is to provide food aid on a multilateral basis for emergency relief and to promote economic and social development, including the feeding of children. At a UN-FAO Pledging Conference in New York in January 1970, \$215,600,000 was pledged toward a two-year program (1971-72). Canada with a pledge of \$30,000,000 is the second largest supporter of the Programme. In 1971, the Intergovernmental Committee (IGC) of the WFP approved a target of \$340,000,000 for the next biennium.

*World Health Organization.*—The World Health Organization (WHO) came into being in 1948 and is also one of the largest of the specialized agencies of the UN, having a total membership of 131 including three associate members. Functioning through the World Health Assembly, the Executive Board, the Secretariat and six Regional Committees, WHO acts as a directing and co-ordinating authority on international health matters. The objective of the Organization, as set out in its constitution, is "the attainment by all peoples of the highest possible level of health". In order to pursue this goal, the WHO, with headquarters in Geneva, provides advisory and technical services to help countries develop and improve their national health services. The 24th World Health Assembly was held in Geneva in May 1971. In order to bring into public focus the health problems with which the Organization is attempting to deal, the Assembly has proposed the celebration of a World Health Day in 1972.

*United Nations Educational, Scientific and Cultural Organization.*—The UNESCO was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms". Its headquarters is in Paris and total membership is 126 states.

The Organization is made up of three principal organs—the General Conference which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to con-

sider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. There is a Canadian member of the Executive Board who will serve on that body until his term expires in 1974. The 16th Session of the General Conference, held in Paris in October and November 1970, approved a budget of \$89,898,560 (U.S.) for 1971-72, giving priority to the educational needs of the developing countries and to science activities, particularly of the application of science to development; the Canadian assessment rate is 2.91. Further information about the Organization may be obtained from the Canadian Commission for UNESCO, Ottawa.

*International Civil Aviation Organization.*—The ICAO, with headquarters in Montreal, was established in 1947 to promote the safe, orderly and economic development of international civil aviation. It has a membership of 121 (1971). ICAO operations are conducted through its Assembly, Council, committees and Secretariat. Canada has been a member of the 27-nation Council, the governing body of ICAO, since its inception.

*International Telecommunication Union.*—Canada is a member of the International Telecommunication Union (ITU), which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The ITU is concerned with the maintenance of international co-operation for the improvement and use of telecommunications of all kinds for the benefit of the general public. It has 129 member countries. The International Telecommunication Convention which was adopted by the Plenipotentiary Conference of the Union at Montreux, Switzerland, in 1965 came into force on Jan. 1, 1967. Canada is represented on the 29-member Administrative Council, the executive organ of the ITU.

*World Meteorological Organization.*—Canada is a member of the World Meteorological Organization (WMO), a specialized agency of the UN since 1951 but developed from the International Meteorological Organization founded in 1878. The membership in 1970 was 133. One of the major programs of the WMO is the "World Weather Watch" for the development of an improved world-wide meteorological system and environment. Canada is a member of the Executive Committee of the Organization.

*Inter-Governmental Maritime Consultative Organization.*—The Inter-Governmental Maritime Consultative Organization (IMCO) was established in 1959 to promote international co-operation on technical shipping problems and the adoption of the highest standards of safety and navigation; its membership in 1971 was 73. IMCO exercises bureau functions for International Conventions on Safety of Life at Sea, Prevention of Pollution of the Sea by Oil and Facilitation of International Maritime Traffic. At the 7th Assembly in 1971, Canada was elected to the Council of IMCO for a two-year term and continues to hold a seat on the Maritime Safety Committee.

*Universal Postal Union.*—The Universal Postal Union (UPU) is one of the oldest and largest of the specialized agencies, having been founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration; membership in 1970 was 143. The Universal Postal Congress is the supreme authority of the UPU and normally meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, UPU activities are carried on by an executive council, a consultative committee on postal studies, and an international bureau. The 16th Congress was held in Tokyo in 1969.

*International Monetary Fund.*—The IMF, established by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems, including the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the regular resources of the Fund, which now amount to some \$30,000,000,000 (of which the

equivalent of about \$4,500,000,000 is in gold) or on the supplementary resources of \$6,000,000,000 made available in 1962 under the General Arrangements to Borrow, which have since been extended to October 1975. Canada's present subscription and quota in the IMF is \$1,100,000,000 (U.S.), of which 25 p.c. is payable in gold and the remainder in Canadian currency.

On Jan. 1, 1970, the first allocation of SDRs to the 104 countries participating in the Special Drawing Account took place. The 3,414,000,000 units of this new fiduciary reserve asset involved in this allocation represented the first instalment of a total of 9,500,000,000 SDRs to be created during the first three-year basic period ending Dec. 31, 1972. Considerable use was made of this new asset during 1970. Total transactions amounted to 672,000,000 units, with the General Account of the IMF acquiring about 290,000,000 units and participating countries the remainder. Among the latter, Canada accounted for almost 58,000,000 units, raising its total SDR holdings to a level 46 p.c. in excess of the 124,000,000 units allocated to Canada on Jan. 1, 1970. This was one of the highest percentage increases in SDR holdings during 1970 by any participating country. The Fund has 111 members. Canada has been represented on the Fund's Executive Board since its inception.

*World Bank Group.*—The World Bank Group, consisting of the International Bank for Reconstruction and Development or World Bank, the International Finance Corporation and the International Development Association, is by far the largest of the multilateral aid-giving institutions.

The *International Bank for Reconstruction and Development* or *World Bank*, like the International Monetary Fund, originated in the Bretton Woods Conference of 1944. Its early loans were made to assist in the postwar reconstruction of Europe but it has played an increasingly important role in the provision of financial assistance and economic advice to the less-developed countries.

By June 30, 1971, the Bank had made 783 loans totalling \$16,068,000,000 (U.S.). The resources available to the Bank for use in its lending operations are: (1) that portion of its subscribed capital which is paid in by governments and freely usable (\$2,384,431,000); (2) its retained income from operations (\$1,444,155,000); and (3) the funds it is able to raise by the sale of bonds to central banks and government agencies and on private capital markets. The World Bank's policy is to keep its lending rates as low as is compatible with the maintenance of its ability to borrow. The current lending rates are 7 p.c. and 7½ p.c. Maturity periods on loans usually range between 15 and 25 years. The level of the Bank's lending in the year ended June 30, 1971 was \$1,896,000,000. The greater part of the Bank's lending has financed so-called infrastructure projects which provide the framework supporting the rest of a country's economy but which generally do not attract private investors. About one third of the total loans has financed the development of electric power plants and transmission lines; another third has financed railways, roads and ports; and most of the remainder has been divided between industry and agriculture. In recent years, however, the Bank has been making loans for education and placing increasing emphasis on agriculture.

Canada's subscription to the World Bank is \$792,000,000 (U.S.) out of a total for all countries of \$23,871,000,000. Only 10 p.c. of each subscription is paid in, however, with the balance remaining as a guarantee against which the Bank is able to sell its own bonds in world capital markets. By selling such bonds and by selling loans from its portfolio to other investors, the World Bank augments its capital. As of June 30, 1971, the Bank had outstanding borrowings of \$5,424,162,000 (U.S.), mostly in the form of U.S. dollar bonds but also including issues denominated in Canadian dollars, Belgian francs, Deutsche marks, Italian lire, Netherlands guilders, British pounds sterling, Swedish kronor and Swiss francs. In all, the Bank has offered seven bond issues totalling \$135,000,000 (Cdn.) in the Canadian market. Maturities on these bonds ranged from one to 25 years and the interest rate from 3½ p.c. to 7 p.c.

The *International Finance Corporation* (IFC) was established in 1956 as an affiliate of the IBRD to assist less-developed member countries to promote the growth of the private

sector of their economies. IFC's principal objectives are to provide risk capital for productive private enterprises, in association with private investors and management; to encourage the development of local capital markets; and to stimulate the international flow of private capital. IFC makes investments in the form of share subscriptions and long-term loans, carries out standby and underwriting arrangements, and provides financial and technical assistance to privately controlled development finance companies. Of IFC's total subscribed capital of \$107,009,000 (U.S.), Canada provided \$3,600,000 (U.S.). In addition to its subscribed capital, IFC is able to finance its activities through loans from its parent institution, the World Bank. Total investments and underwriting commitments by IFC to June 1969 amounted to \$364,700,000 (U.S.). Commitments made during the year ended in June 1969 were \$92,900,000.

The *International Development Association* (IDA), also an affiliate of the IBRD, was established in 1960 to meet the situation of a growing number of less-developed countries whose need for, and ability to make use of, outside capital is greater than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to June 1971 have each been for a term of 50 years, bearing no interest but with a service charge of  $\frac{3}{4}$  of 1 p.c. per annum. IDA secures its resources from governments in the form of interest-free subscriptions and contributions and, to a smaller extent, from a portion of World Bank profits. As of June 30, 1971, resources made available to the Association totalled approximately \$3,015,000,000 (U.S.), of which Canada contributed \$154,530,000 (U.S.). Credits extended by the Association totalled about \$3,340,000,000 (U.S.).

**International Atomic Energy Agency.**—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the UN. The Agency has been empowered by the UN to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways. As of August 1971, membership consisted of 102 states. Because Canada has been designated as one of the members most advanced in nuclear technology, including the production of source materials, a Canadian representative has served on the IAEA Board of Governors since the inception of the Agency. Canada is the only non-nuclear weapon state to occupy a permanent seat on the Board of Governors.

Conferences and symposia, the dissemination of information and the provision of technical assistance are among the methods that the Agency adopts to carry out its functions. With the rapid expansion in the use of nuclear power, many of the Agency's activities are devoted to this field as well as to the use of isotopes in agriculture and medicine. Another significant role of the IAEA relates to the development and application of safeguards to ensure that nuclear materials supplied for peaceful purposes are not diverted to military uses. Under the Treaty for the Non-Proliferation of Nuclear Weapons (NPT), each non-nuclear weapon state which has adhered to the Treaty is bound to conclude an agreement with the IAEA before Mar. 5, 1972, providing for safeguards on its entire nuclear program. Agency inspectors are expected to be carrying out safeguards inspections in Canada in 1972 as well as in more than 60 other countries.

**International Law Commission.**—By Article 13(1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in their individual capacity. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. As of Dec. 31, 1971, the 25 countries whose nationals formed the International Law Commission were: Afghanistan, Algeria, Argentina, Brazil, Chile, Ecuador, Finland, France, Greece, Hungary, India, Iraq,

Israel, Italy, Japan, Madagascar, Mexico, the Netherlands, Nigeria, Senegal, the Union of Soviet Socialist Republics, the United Arab Republic, the United Kingdom, the United States of America and Yugoslavia. Canada's term expired in 1968.

#### **Subsection 4.—Canada and the Conference of the Committee on Disarmament**

"No single international activity . . . rates higher priority in the opinion of this Government than the pursuit of effective arms control and arms limitation agreements." These words, spoken by the Prime Minister of Canada in October 1969 during the Throne Speech Debate, clearly indicate the importance that is placed by the Canadian Government on working for a safer world through arms control and disarmament. Canada is an active member of the Conference of the Committee on Disarmament (CCD), the 26-nation United Nations negotiating body that meets in Geneva as successor to the Eighteen-Nation Disarmament Committee (ENDC). This Committee, of which the United States and the Soviet Union are co-chairmen, represents in microcosm the world-wide concern to stop the arms race. The CCD currently has before it the task of seeking agreements in such important areas of arms control as a comprehensive prohibition of nuclear weapons testing to include underground tests, and banning by international agreements of the research, development and production of chemical biological (bacteriological) weapons.

#### **Subsection 5.—Canada and the North Atlantic Treaty Organization**

During 1970, NATO continued its efforts to promote arms control and disarmament measures in Europe, and progress towards East-West political solutions. The defence problems of the Alliance were subjected to a searching review and NATO's newly initiated activities in the field of the environment were developed further.

At the meeting held at Rome on May 26 and 27, Ministers of the North Atlantic Alliance discussed means of promoting further improvement in East-West relations. One possibility was the idea of a large conference or series of conferences on European security and co-operation, as proposed by the Soviet Union and other Eastern European countries. Canada took the position that a conference at the right time and in the right circumstances would be most useful but that progress in individual East-West talks would be a good yardstick for determining when the time had come for multilateral discussions. Canada also urged the Alliance to make a clear and forthright offer to explore with the members of the Warsaw Pact how to start negotiations on balanced force reductions in Central Europe, including suggested guidelines for the reductions.

In both respects, the outcome of the Rome meeting was very satisfactory to Canada. The meeting agreed that the allied governments would be willing to enter into multilateral discussions to explore the possibility of a conference insofar as progress was recorded as a result of ongoing discussions, in particular on Germany and Berlin. On balanced force reductions, NATO's declaration explicitly invited interested states to hold exploratory talks, and suggested four specific considerations which the allies would put forward in such talks.

In October, Canada was the host at a two-day meeting of NATO's eight-member Nuclear Planning Group, held in Ottawa. Defence Ministers attending this meeting discussed the balance of strategic forces, refined the political guidelines for the initial defensive tactical use of nuclear weapons which they had adopted in 1969, and also agreed on political guidelines to cover the possible use of atomic demolition munitions in defence of the NATO area.

At a meeting of NATO Foreign and Defence Ministers held in Brussels in December, the member governments, with Canada's support, confirmed their readiness to hold multilateral talks on the holding of a conference on European security and co-operation, as soon as talks on Berlin had reached a satisfactory conclusion and insofar as other ongoing talks were proceeding satisfactorily. In addition, they renewed their invitation to hold explora-

tory talks on balanced force reductions in Central Europe, and indicated a readiness to examine different aspects of the question, including the idea of reductions in foreign forces which had been publicly advanced by Warsaw Pact countries during the summer.

Ministers at Brussels endorsed a recommendation that allied governments should achieve, by 1975 if possible, the elimination of international discharges of oil into the sea. This and other accomplishments of NATO's newly established Committee on the Challenges of Modern Society (CCMS) were welcomed as evidence that the allies were effectively combining their resources to stimulate action on environmental problems. Canada undertook during the year to lead an international study under CCMS auspices, in conjunction with France, Belgium and the United States, on inland water pollution, and also agreed to assist in an equivalent study on coastal water pollution.

At the Brussels meeting, Defence Ministers of the Alliance approved the conclusions of a comprehensive study of the defence problems which NATO will face in the 1970s. They underlined the special military and political role of North American forces in Europe, and welcomed the decision of European member nations to make an increased effort to strengthen the Alliance's defence capability.

**Canadian Contribution to NATO.**—During 1970, Canada implemented its decision, announced in 1969, to conduct a planned and phased reduction of its forces in Europe, against the background of the change that had taken place in the ability of the western European countries to provide necessary conventional defence forces and armaments. The land element of the Canadian Forces in Europe was co-located with the air element in Southern Germany, and the combined strength of the two was brought to 5,000 instead of the previous total of 10,000.

Canadian naval forces continued to be earmarked for assignment to the Supreme Allied Commander Atlantic (SACLANT), for the defence of the North Atlantic Region. Canada also participated with the United States in the defence of North America, which is part of the North Atlantic Treaty area, through the provision of sea, land and air elements. The latter are assigned to the operational control of the North American Air Defence Command (NORAD).

### Subsection 6.—Canada and the United States

Relations with the United States are of vital importance to Canada and constitute what is in many ways a unique experiment in international relations. Geography has made the two countries neighbours, community of interest has made them friends, and the demographic realities and economic patterns of today contribute to the conception of partnership which best characterizes the relationship between them. As an important example, Canada sells to the United States some three quarters of all its exports and buys almost one quarter of that country's exports, in an exchange of goods that now totals in excess of \$20,000,000,000 a year. Co-operation in bilateral and multilateral affairs has marked this relationship in the past and experience has demonstrated a willingness in both countries to maintain and foster a spirit of sympathy and understanding in dealing with one another.

As indicated in the previous Sections and Subsections of this Chapter, both countries are active members of the United Nations and its many specialized agencies and both participate actively in the North Atlantic Treaty Organization (NATO), the General Agreement on Tariffs and Trade (GATT), the Organization for Economic Co-operation and Development (OECD), and other important international organizations. There are also many bilateral bodies that facilitate Canada-United States co-operation. The Ministerial Committee on Trade and Economic Affairs annually brings together members of the Cabinet in both countries for extensive discussions on a wide range of problems of bilateral and international interest. The Permanent Joint Board on Defence and the International Joint Commission are forums, respectively, for the discussion of North American defence and problems related to boundary waters, and many joint committees

and agencies deal with other specialized subjects. But perhaps the most important factor in reinforcing the traditional friendship of the two countries is the continual intermingling of their peoples as private individuals across the shared border.

### **Subsection 7.—Canada and the Commonwealth Caribbean**

The present close relationship between Canada and the Commonwealth Caribbean has resulted as a logical progression from the historical ties existing between the two areas. Trading relations over several centuries have been close, and have been supplemented by considerable Canadian commercial interests and investment in the area. Canada's common association in the Commonwealth has also contributed to understanding through mutually shared traditions, institutions and values, resulting in increased communication between the two areas. In the past few years this communication has been emphasized through the large movement of people between the West Indies and Canada as tourists, students, businessmen and immigrants.

The current phase of Canadian relations with the Commonwealth Caribbean dates from the Commonwealth Caribbean/Canada Conference held in Ottawa in July 1966, which established a broad framework of guidelines along which relations between the two areas could develop. Considerable progress has been made in realizing the recommendations agreed to at the Conference. As part of the continuing process of consultation and review of relations, a special Canadian Mission to the Commonwealth Caribbean in the fall of 1970 visited 13 countries and territories. Specific discussions on the sugar rebate and the Agricultural Development Fund took place as well as talks on a wide range of matters of bilateral interest.

At present (September 1971) there is an estimated \$450,000,000 to \$550,000,000 in Canadian investment in the region. During 1970, Canadian exports reached \$134,100,000 as compared with \$113,000,000 in 1969, and imports totalled \$77,900,000 as compared with \$108,700,000. In the fiscal years ended Mar. 31, 1967 to 1971, more than \$100,000,000 was allocated to the Commonwealth Caribbean under the Canadian development assistance program; \$24,000,000 in 1970-71 alone. More than 3,000 Canadians live as permanent residents in the region and about 125,000 visit the islands annually. During 1970, nearly 14,000 West Indians immigrated to Canada. There are Canadian High Commissions in Jamaica, Trinidad and Tobago, and Guyana, and these three countries, as well as Barbados, maintain High Commissions in Ottawa. The Leeward and Windward Islands have a Trade Commissioner in Montreal.

### **Subsection 8.—Canada and Latin America**

Canada has formal diplomatic relations with all 20 Latin American republics and maintains 11 resident diplomatic missions in the area. Canada's relations with these countries have increased substantially during the past few years.

Canada has for some years been a member of several inter-American institutions linked with the Organization of American States (OAS): the Pan American Institute of Geography and History, the Inter-American Statistical Institute, the Inter-American Centre for Tax Administrators, the Centre for Latin American Monetary Studies and, recently, the Pan-American Health Organization. Canada also continues its membership in the Postal Union of the Americas and Spain, a body closely linked to the OAS although not part of it.

In April 1971, the Canadian Observer Delegation to the General Assembly of the OAS in San Jose, California, announced the Government's desire to establish closer ties with the OAS through the establishment of a Permanent Observer Mission. The General Assembly passed a resolution approving in principle the new status of Permanent Observer, and entrusted the Permanent Council of the OAS with the task of determining the timing and criteria for its implementation. In addition to this initiative, Canada has stated its intention to seek full membership in the Inter-American Development Bank, and negotiations

have begun in that connection. Moreover, Canada intends to become a member of the Inter-American Institute of Agricultural Sciences and of two other inter-American organizations as soon as the necessary formalities can be completed. It should also be mentioned that Canada has been an active member of the United Nations Economic Commission for Latin America since 1961. Lastly, Canada has inaugurated and is developing a special program of technical assistance in Latin American countries.

Canada has been officially represented at numerous meetings and conferences concerned with Latin America and inter-American affairs. Canadian observer groups have regularly attended the annual meetings of the Inter-American Economic and Social Council, the Inter-American Cultural Council and the Inter-American Committee for the Alliance for Progress, all of which are organs of the OAS. Canadian observers have also been present at meetings of the Inter-American Children's Institute and the Inter-American Indian Institute. As well, Canadian observer delegations have attended conferences of the Ministers of Education on Economic Planning for Latin America, meetings of the Board of Governors of the Inter-American Development Bank, the Inter-American Conference of Ministers of Labour, and the annual meetings of the Inter-American Tropical Tuna Commission. In addition, Canada acted as host for the American Regional Conference of the International Labour Organization held in Ottawa in September 1966, and for the UNESCO Conference of National Commissions in the Western Hemisphere held in Ottawa in August 1971.

In December 1964, the Canadian Government signed an agreement with the Inter-American Development Bank under which Canada agreed to make available \$10,000,000 (Cdn.) in development loan funds for use in financing development projects in Latin America. This initial commitment was followed in each of the six succeeding years by additional commitments of an equal amount, bringing the total Canadian development loan funds made available to Latin America to \$70,000,000 (Cdn.). As at August 1971, some 20 loans totalling approximately that amount had been approved for financing development projects in the area.

Although the volume of Canadian trade with Latin America is still a small part of total Canadian trade, it has more than quadrupled since 1946. In 1970, Canadian exports to this area exceeded imports for the first time. Argentina, Brazil, Cuba, Mexico and Venezuela rank among the top 20 Canadian export markets. The Canadian Government has directly facilitated Canadian exports to Latin America and indirectly assisted Latin American economic development through the provision of long-term credit under the Export Development Act. In terms of signed agreements, these credits in mid-1971 totalled almost \$300,000,000 (Cdn.).

#### **Subsection 9.—Canada and Europe, Africa, the Middle East, the Far East and the Asian Development Bank**

**Canada and Europe.**—While Canadian interest in most areas of the globe is increasing, Canada's relations with Europe remain of special importance. They are deeply rooted in Canada's origins, spring from the common cultural heritage which is shared with Britain and France and also reflect the ties with other European countries from which Canada's population is derived. They have been strengthened by Canada's substantial participation, on European soil, in two World Wars and by Canada's continuing stake in European security.

Canada's relations with Western Europe have developed steadily under the impulse of major Canadian interests in the area. These countries have long been major trading partners for Canada and its chief source of immigrants, and exchanges with them are having an increasingly important effect on Canada's cultural life and the development of its bicultural policy. Moreover, as a result of its growing prosperity and unity, Western Europe is likely to assume a greater importance for Canada because of the influence it wields, the possibility of fruitful co-operation it offers in many fields, and the element of

balance it can provide in Canada's external relations. Canada maintains close and extensive bilateral relations with Britain and France in particular, as well as with most other western European countries, and has resident diplomatic missions in almost all of them. As indicated in preceding Subsections, Canada is also, along with a number of western European countries, an active member of NATO and the OECD, as well as of wider international associations such as the General Agreement on Tariffs and Trade (GATT). Canada follows with great interest the evolution of the European Economic Community since European multilateral co-operation, particularly with British accession to the EEC, tends to add a new element to the Canadian-European relationship.

Canada has a substantial interest in improving relations with the communist countries of Eastern Europe, not only because of the benefits resulting from increased trade, scientific and technological co-operation and cultural exchanges with those countries but also because a better relationship can contribute to détente in Europe. The prospects for such co-operation with the Soviet Union are particularly good and were considerably enhanced by the Prime Minister's visit to the Soviet Union. The improved climate of East-West relations and the accompanying growth in East-West contacts and exchanges have improved the practical opportunities for Canada to pursue mutually advantageous relations with other eastern European countries as well. Canada has resident diplomatic missions in Moscow, Prague, Warsaw and Belgrade and maintains diplomatic relations with Hungary, Romania and Bulgaria through non-resident ambassadors.

**Canada and Africa.**—Canada in the past had a certain latent interest in Africa through the missionary and commercial activities of Canadians. Formal relations have evolved rapidly over the past 10 years, paralleling the accession to independence of the majority of former colonial territories. The increasing voice of these newly independent states in world affairs, the recognition of their development problems and the importance of the political issues affecting the whole African Continent have sparked this evolution.

Direct relations were first established with former British colonies as they became independent within the Commonwealth. Increasing contacts and diplomatic relations with the newly independent French-speaking African states soon followed in recognition of the bicultural outlook of this country and the important role played by these countries in African affairs. Canada now has diplomatic relations with almost all the independent African states and there are resident Canadian missions in 13 countries on that Continent. Coupled with the development of bilateral diplomatic and commercial relations has been the expansion of a significant program of Canadian aid to Africa. This program, with its English and French components, directed more than \$120,000,000 of aid funds to the African Continent in 1970-71.

**Canada and the Middle East.**—For the past quarter-century, the Middle East has been a focus of tension and conflict. During this period, Canada has participated in United Nations efforts to promote calm and stability in the area. It has also contributed substantially to measures to alleviate want among the victims of recurring hostilities.

Canada provided observers to the United Nations Truce Supervision Organization (UNTSO) and was closely associated with the formation of the United Nations Emergency Force (UNEF). Canadian troops served with UNEF in Gaza and Sinai from its inception until its withdrawal in May 1967. Canadian officers continue to serve with UNTSO, which is supervising the Arab-Israeli cease-fire.

Since the establishment of the United Nations Relief and Works Agency for Palestine refugees (UNRWA), Canada has been one of the leading contributors to that Agency. Canadian Government contributions have taken the form of cash, food and other supplies aimed at relieving human suffering in the Middle East. In emergency situations it has provided various forms of assistance through the International Red Cross.

*The recently completed Akonalinga Bridge over the Nyong River in Cameroon, built with Canadian assistance.*

**Canada and the Far East.**—For many years Canada has had important links, both official and private, with East and Southeast Asia, but over the past decade Canadians have become steadily more aware of their position as a Pacific as well as an Atlantic nation. With the development of modern transport and communications, the Pacific Ocean has ceased to be a barrier and, as a result, contacts with the countries and peoples of Asia are increasing rapidly in number and variety. Many of these contacts are based on the growing volume of trade and other economic activity, including tourism. Japan, for example, is Canada's third largest trading partner and bilateral trade between the two countries amounted in 1970 to almost \$1,375,000,000. The links between Canada and Japan have been greatly strengthened by the prominent role of Canada in Japan's 1970 World Exposition at Osaka and by frequent high-level visits and consultations between the two countries.

The establishment of diplomatic relations between Canada and the People's Republic of China was announced in Parliament on Oct. 13, 1970, and ambassadors were exchanged within a few months. In the course of 1971, Canada's Minister of Industry, Trade and Commerce led a high-level economic mission to Peking; a Canadian university group and several Canadian journalists travelled through China, each making a contribution to Canada's policy of further developing relations with China in all spheres.

As a member of the International Commissions for Supervision and Control in Indochina, Canada continues to maintain delegations in Laos and Viet-Nam. The Canadian delegation was withdrawn from Cambodia at the end of 1969 when the International Commissions there adjourned *sine die* at the request of the Cambodian Government.

Canada's relations with the other countries of the Far East are also of increasing importance, a fact reflected in the Pacific Policy Review undertaken by the Government early in 1970. The long-term objectives of regional co-operation and development are fundamental to the future growth and stability of the Pacific region and particularly of

Southeast Asia. Canada's interest in the area has been expressed through its participation in the Colombo Plan, its membership in the Asian Development Bank and its status as an observer in the Economic Commission for Asian and the Far East (ECAFE). Canada maintains missions in the capitals of most southeast Asian countries. The Philippines is Canada's largest trading partner in the area and Canada has a number of commercial dealings with Malaysia and Singapore in addition to economic and technical assistance programs. During his visit to Indonesia in 1971, the Prime Minister expressed Canada's intention to increase substantially its economic assistance to these countries.

The Canadian Government has expressed its readiness to contribute to international programs for economic rehabilitation of Viet-Nam and the other countries in Indochina after the end of hostilities and, as a member of the Asian Development Bank, is contributing to the Bank's technical assistance program and its special fund. Canada also continues to be a substantial contributor to United Nations agencies concerned with the economic development of Asian countries.

**Canada and the Asian Development Bank.**—Canada is a member of the Asian Development Bank, a regional development agency established in 1966 with Articles of Agreement patterned broadly after those of the World Bank and the other international financial institutions (see p. 190). The Bank's subscribed capital stock is \$1,005,380,000 (U.S.), of which one half was paid in over the five-year period 1966-70. The balance of member-country subscriptions will remain as a callable guarantee against which the Bank may sell its bonds on world capital markets. Asian regional countries, including Japan, Australia and New Zealand, have subscribed \$625,380,000 (U.S.) and non-regional countries have subscribed the remaining \$380,000,000 (U.S.). Canada's subscription is \$25,000,000 (U.S.), of which \$12,500,000 (U.S.) has been paid toward the paid-in portion.

For its ordinary operations, to be financed from paid-in equity capital or any resources raised on world capital markets, the Bank expects to follow a pattern similar to that of the World Bank and to lend at rates of interest related to the rate which the Bank itself would have to pay on any bond issues. The present lending rate (October 1971) has been set at 7½ p.c. As of September 1971, the Bank had made available 47 loans totalling \$366,635,000 (U.S.) from these ordinary resources to countries of the region.

The Bank also established Special Funds which may be provided to member countries on more flexible terms. Such special operations are financed by voluntary contributions and kept separate and distinct from the Bank's ordinary capital resources. Canada has agreed to make available \$25,000,000 (U.S.) over a five-year period for the Bank's special operations. As of September 1971, the Bank had supplied 23 loans totalling \$79,408,000 (U.S.) from these Special Funds to Afghanistan, Ceylon, Indonesia, Khymer Republic, Laos, Malaysia, Nepal, Philippines, Singapore, Viet-Nam and Western Samoa.

#### **Subsection 10.—Canada and the Organization for Economic Co-operation and Development**

The Organization for Economic Co-operation and Development (OECD) was established in September 1961, as successor to the Organization for European Economic Co-operation (OEEC), which had been founded in 1948 by the countries of Western Europe to facilitate the reconstruction of their war-shattered economies. With the establishment of the OECD, Canada and the United States and later Japan (May 1964) and Australia (June 1971) joined with the countries of Western Europe to form what is today a major, intergovernmental forum for consultation and co-operation among the advanced industrialized nations in virtually every major field of economic activity. At present, 23 countries are full members of the Organization, while Yugoslavia has a special status entitling it to participate in certain activities. The Organization's headquarters are in Paris.

The aim of the OECD is to facilitate the formulation of policy approaches which are conducive to the balanced economic growth and social progress of both member and non-member countries. The Organization provides an instrument for assembling and examining knowledge relevant to policy-making and also a forum, meeting the year round, for the exchange and analysis of ideas and experiences from all the member countries. (Recent examples of this consultative process are the report on Canadian science policy issued in December 1969, one of a series of reviews of national science policy of OECD member countries, and the attention given by the Organization and its members in the past year [1970-71] to the problems of inflation.)

The Organization plays a significant role in the harmonization of international economic and financial policy and constitutes the main forum for consultations among developed countries on development assistance questions. The original focus of the OECD upon more traditional economic, trade and development matters has altered and new activities have been undertaken in the areas of agriculture, the environment, industry, science and technology, and manpower policy. This broader orientation places increasing emphasis upon the qualitative, as well as the quantitative, aspects of economic growth and is most recently seen in the Organization's work on the problems of environment and welfare in the context of economic policy. At the first Ministerial Council in 1961, member countries approved a growth target of 50 p.c. for the decade to 1970; that goal has been considerably exceeded and a new growth target will be set for the coming decade.

The OECD brings together government officials as well as representatives of private business, labour unions, universities and other non-governmental bodies in both deliberative and consultative capacities, and provides for international liaison among such groups. Within Canada, liaison has been established with the business community through the Canadian Business and Industry Advisory Committee, which was established in 1962 and comprises representatives of the Canadian Chamber of Commerce, the Canadian Council of the International Chamber of Commerce and the Canadian Manufacturers' Association. Arrangements also exist for consultation with Canadian labour organizations, universities and other non-governmental bodies. Representatives of provincial governments frequently attend OECD meetings when subjects of particular interest to the provinces are being discussed.

### Subsection 11.—Canadian External Aid Programs

**The Colombo Plan.**—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, in January 1950. Although the Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development and the raising of living standards of all countries and territories in the general area of South and Southeast Asia. Its membership includes Afghanistan, Australia, Bhutan, Britain, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Iran, Japan, Republic of Korea, Laos, Malaysia, Nepal, New Zealand, Pakistan, the Philippines, Singapore, Thailand, Viet-Nam and the United States.

The Colombo Plan Consultative Committee is the top policy-making body and consists of Ministers of the member governments. The Committee meets each year to survey the Plan's progress, assess needs, and examine methods for filling in the gaps in resources and speeding up the pace of development. The Committee met in Victoria, B.C., in October 1969, and it was agreed at that time to streamline committee structure and procedure and to extend the life of the Plan to 1976. The most recent meeting was in Manila in the Philippines, in February 1971. As a consultative body, the Committee makes no collective policy decisions binding on member countries; a Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation

program of the Plan. The Colombo Plan Bureau in Ceylon services the Council, records all technical assistance given in the area, develops a program of intra-regional training and is responsible for the Plan's information program.

From the inception of the Plan in 1950 through March 1971, Canada made available a total of \$1,371,000,000 in aid for capital and technical assistance projects in South and Southeast Asia and a further \$136,000,000 as the initial allocation for 1971-72. The largest contributions were made to Ceylon, India, Malaysia and Pakistan and, following the Canadian Government's Foreign Policy Review of 1970, Indonesia also became a major recipient of bilateral assistance. The Canadian contribution to Colombo Plan countries consists primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, power-generating plants, fisheries projects, resource surveys, hospital equipment and books. It has also included grants for foodstuffs, through the internal sale of which recipient governments have been able to raise funds to meet local costs of economic development projects, and development loans for raw materials, fertilizers and certain commodities.

Through the Technical Assistance Program, more than 5,000 persons from all countries in the area have come to Canada under Federal Government auspices for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. More than 600 Canadian experts have been sent abroad for service in Colombo Plan countries in such fields as fisheries, forestry, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources-survey teams and on the installation and operation of capital equipment. As of January 1971, 29 Canadian advisers and 31 Canadian educators were serving under CIDA contracts in the region, and 586 trainees from Colombo Plan countries were in Canada under government auspices.

**Commonwealth Caribbean Program.**—In 1958, when the Federation of the West Indies was being formed, Canada undertook a five-year \$10,000,000-program of economic and technical assistance. Following the dissolution of the Federation in 1962, it was decided to continue providing assistance to its component territories—Jamaica, Trinidad and Tobago, Barbados, Guyana, British Honduras and the Leeward and Windward Islands—and, up to March 1971, \$128,730,000 in loans and grants had been made available to the area, with initial allocations for 1971-72 being a further \$26,600,000.

Under this program the area has received more Canadian development assistance per capita than any other region of the world. Projects have included bridges and water systems in Jamaica, dairy cattle development and rural electrification for Trinidad and Tobago, a deep-water wharf at St. Vincent, buildings on several islands for the University of the West Indies, improvements to a number of airports, and construction of many schools throughout the region. Assistance under a five-year program for development in the Leeward and Windward Islands, begun in 1967, is concentrated in the fields of education, airports, water supply improvement and agriculture.

A substantial amount of technical assistance has also been given. In January 1971 there were 359 trainees in Canada from the Commonwealth Caribbean, the fields of study including agriculture, engineering, fisheries, forestry, medicine and public administration. In addition, 129 Canadian teachers and advisers were serving in the Commonwealth Caribbean.

**Special Commonwealth Africa Assistance Plan.**—Canadian assistance to Commonwealth Africa began in 1960 through the Special Commonwealth Africa Assistance Plan, which arose from discussions at that year's meeting of Commonwealth Prime Ministers. Through the past decade the program has grown steadily from an initial concentration on high-priority technical and educational assistance to include a variety of capital projects and pre-investment surveys, while the original emphasis on West Africa has been

balanced by projects in energy, transportation, communications, agriculture and economic planning in the developing countries of eastern and southern Africa.

From 1960 up to March 1971, Canada made available a total of \$179,380,000 for bilateral development programs in Commonwealth Africa. The initial allocation for 1971-72 is \$35,800,000, with large programs under way in Ghana, Nigeria and Tanzania. Technical assistance continues to receive major emphasis; in January 1971, 301 Canadian advisers and educators were serving in Commonwealth Africa under CIDA contracts, while 424 trainees were in Canada.

Significant projects include the Accra Trades Training Centre and Volta River hydro-electric program in Ghana, the Benin City technical school and telephone equipment in Nigeria, power transmission, road and resource surveys, and economic advisers in Tanzania, resource surveys in Kenya, dairy and livestock improvement in Uganda, and technical/vocational education in Zambia. Locomotives have been provided recently to several countries through CIDA development loans, and an important power-generating project has begun to assist in the development of Botswana's mineral resources.

**Commonwealth Scholarship and Fellowship Plan.**—The proposal to establish a Commonwealth Scholarship and Fellowship Plan was made at the Trade and Economic Conference held at Montreal in September 1958. The conference envisaged a program of 1,000 university scholarships, of which Britain undertook to provide one half and Canada one quarter. This Plan was designed to enrich the intellectual life of each country of the Commonwealth by enabling an increased number of its brighter students to share in the wide range of educational resources available throughout the Commonwealth and thus promote the equality of educational opportunity at the highest level. The Association of Universities and Colleges of Canada took over administration of the Plan in 1969 although funds continue to be provided by the Canadian International Development Agency. The number of students on award in January 1971 was 229, and actual expenditures in 1969-70 were \$1,242,608.

In 1965, Research and Visiting Fellowships were introduced as part of the Canadian contribution to this Plan to enable senior educationists from other Commonwealth countries to visit Canadian universities and other educational institutions on invitation to carry out investigations, study or research in their particular field.

**Commonwealth Fund for Technical Co-operation.**—This major venture in multilateral aid to Commonwealth countries was established on Apr. 1, 1971 following a January conference of Commonwealth heads of government, with Canada and the United Kingdom as major contributors. The goal is to provide advisory services in fields such as economic planning, and to organize the system of "third country" training under which students will be enabled to attend institutions in other parts of the developing Commonwealth. Canada offered to contribute annually the lesser of 40 p.c. of the total financial contributions or \$350,000, in the initial phase.

**Francophone Africa Assistance Program.**—Canadian assistance to the French-speaking countries of Africa began modestly in 1961, with emphasis on the provision of Canadian teachers, but has grown rapidly in recent years following the 1968 visit of a special Canadian Government mission which examined development needs and recommended fields in which help could be offered. Today, half the Canadian teachers serving overseas through contracts with the Canadian International Development Agency are in Francophone Africa, and many significant projects are under way.

The total amount made available for assistance to the 21 countries of Francophone Africa up to March 1969 was \$56,986,600. Allocations for 1969-70 were \$32,000,000, for 1970-71, \$46,780,000 (plus a special allocation of \$17,440,000 to cover certain major projects

in Tunisia and Niger), and for 1971-72, \$50,780,000. In January 1971, there were 63 Canadian advisers and 408 teachers serving in Francophone Africa, and 416 trainees were studying in Canada. About 1,400 students came to Canada from French-speaking Africa in 1970 under CIDA sponsorship.

Important projects include the provision of food to Algeria, Morocco and Tunisia, schools in Senegal, regional development schemes in Tunisia and Morocco, a public health program in Cameroon, forestry assistance in Congo-Kinshasa, the "Unity Road" highway in Niger, and rural electrification in Ivory Coast.

**Latin American Program.**—Canadian assistance to Latin America began in December 1964, when the Canadian Government concluded an agreement with the Inter-American Development Bank (IADB) by which Canada allocated \$10,000,000 in "soft" development loan funds for use in high-priority economic, technical and educational projects in Latin America. Up to Mar. 31, 1971, Canada had allocated \$60,000,000 to the IADB. Further funds have been allocated for the year 1971-72. Under the terms of the agreement, the IADB selects and processes proposed loan projects before submitting those considered suitable to the Canadian Government for its approval.

With the approval by September 1971 of some 20 loan agreements, all funds have been committed. Of these loans, half are for pre-investment studies by Canadian experts to determine the economic and technical feasibility of potential projects. Two major loans were made to Brazil. One is for the building of an electric power project which will take four years to complete; Canadian engineering consultants will be retained to advise on the extension and improvement of the electrical distribution system of the region. The other, which will also employ Canadian consultants, is a study to determine the feasibility of building South America's first airport for supersonic and jumbo jets. A loan to Colombia will go toward the completion of one of the largest hydro-electric projects on the continent on the Upper Anheicaya River.

Following a 1968 ministerial mission to Latin America, a program of bilateral assistance was launched to bring country-to-country technical assistance in Latin America to a similar stage as in other regions. The new program, being developed in consultation with multilateral and private organizations already at work in the area, will emphasize projects in agriculture, forestry, fisheries, education and community development, to help create jobs and spread the benefits of change over a wide section of the public. The 1971-72 allocation for country-to-country technical assistance is approximately \$10,000,000.

**Co-operation with the United Nations and Its Specialized Agencies, and with other International Aid Programs.**—In addition to the annual contributions made to the United Nations Development Program, which encompasses all UN programs of technical assistance, Canada arranges training programs in this country for individuals studying under the auspices of the different specialized agencies. In 1970, 105 training places were made available under Plan "O" of the United Nations. Canada also assists in the recruitment of Canadians for service with the specialized agencies either at agency headquarters or in developing countries on specific technical assistance assignments. Canadian allocations to multilateral organizations—including UN agencies, the World Bank, and regional development banks—amounted to \$66,890,000 for 1970-71 and will exceed \$100,000,000 in 1971-72, for a total since 1951 of about \$580,000,000.

**The Canadian International Development Agency.**—Since 1960, the operation and administration of Canada's external assistance programs have been the responsibility of the External Aid Office, renamed in 1968 the Canadian International Development Agency, under the direction of a president. Canada's allocations for external aid rose from \$338,700,000 in 1969-70 to \$383,700,000 in 1970-71. The initial allocation for 1971-72 is \$426,400,000, of which \$101,160,000 is for multilateral programs such as support for United Nations agencies and development banks, \$85,000,000 is for food aid, \$43,000,000 is

for technical assistance, and \$179,650,000 is for bilateral economic aid. Canadian bilateral aid continues to be used mainly to provide Canadian goods and services to the less-developed countries, although the minimum Canadian content for goods supplied has been reduced from 80 p.c. to 66 $\frac{2}{3}$  p.c., permitting aid funds to be used for a much wider range of Canadian goods under competitive conditions.

During 1970, there were about 2,600 students and trainees from developing countries studying in Canada under CIDA auspices. About 850 Canadian educators are working overseas through CIDA programs, mainly to improve indigenous educational capabilities. Under the technical assistance program, CIDA has some 250 experts abroad carrying out a variety of professional and technical jobs. CIDA in 1969 launched a program to assist voluntary and non-government agencies to increase the scale and scope of their own contributions to international development. Another important addition to CIDA's activities during 1969 was the establishment of the Business and Industry Division. In conjunction with the Department of Industry, Trade and Commerce, the Agency will help Canadian firms to identify suitable opportunities for direct participation in the less-developed countries and use the various programs of special assistance available to them.

**International Development Research Centre of Canada.**—In May 1970, Royal Assent was given to legislation authorizing the establishment of an International Development Research Centre. Canadian-financed but international in character, the Centre will bring together experts from both the developed and the developing countries and provide them with the facilities and resources to conduct research into the problems of the economically under-developed regions of the world and into the means for applying scientific and technical knowledge to the advancement of those regions.

*A member of the Canadian medical team serving in Tunisia's Pediatric Institute tending one of her small patients.*

*Two students from Laos studying forestry engineering at Université Laval in Quebec. There are more than 1,800 trainees from 70 countries studying in Canada under the sponsorship of the Canadian International Development Agency.*

# CHAPTER III.—POPULATION

## CONSPECTUS

## Section 1.—Census of Population

This Section normally presents a limited summary of the voluminous data on population recorded by the Census of Canada. Such summary data resulting from the 1971 Census—Canada's eleventh decennial census since Confederation—as is available at the time of going to press with this publication (March 1972) will be found in Appendix II. Detailed census statistics and analyses are being published, as they become available, in census bulletins which are obtainable from Statistics Canada, Ottawa K1A 0T7. A list of these publications, with their prices and an order form, is obtainable on request. Reports are being issued in four main series, as follows:—

### Advance Series

Reports in the Advance Series provide summary information on basic topics for which there is wide demand and are published at earlier dates than the regular series of volume reports. They cover final population counts for various types of geographical areas and broad subject-matter classifications on the most frequently requested topics such as age, language, ethnic groups, etc. There are approximately 22 reports in the Advance Series, nine relating to data collected on a 100-p.c. basis and 13 relating to sample data.

### Volume Series

Reports in the Volume Series represent the main results of the 1971 Census and may be ordered singly or in volume sets. They are prepared in such a way that they may be combined within hard-covered binders to form the complete subject matter of each Volume or Volume Part. It is expected that there will be close to 200 individual reports in the complete Series to form over 20 Volume Parts.

### Census Tracts

Basic population and housing data will be issued for each of the larger cities (or metropolitan areas) according to census tracts (i.e., intra-city statistical areas of approximate uniformity in population size and composition). Some 29 cities are included in the census-tract program: St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Quebec, Montreal, Trois-Rivières and Sherbrooke, Que.; Ottawa, Toronto, Hamilton, London, Windsor, Oshawa, Sudbury, Kingston, Kitchener, Brantford, Niagara-St. Catharines, Peterborough, Sarnia, Sault Ste. Marie and Thunder Bay, Ont.; Winnipeg, Man.; Regina and Saskatoon, Sask.; Calgary and Edmonton, Alta.; and Vancouver and Victoria, B.C.

### Special Series

Special Series reports contain some basic materials not included in the regular Volume Series and which relate for the most part to more detailed geographical areas or represent data of more specialized interest. Also, it is an open-ended series to which later reports may be added as needs arise.

## Section 2.—Intercensal Population Estimates

Estimates of the total population of Canada and of the population of each province as of June 1 are prepared and appear about Sept. 1 of each intercensal year. Such estimates have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates of population begin with the preceding census counts; births and immigration are added, deaths and emigration are subtracted and, for provincial estimates, inter-provincial migration taken into account. When figures become available from a new census, the estimates for the intervening years are adjusted to the newly recorded population figures. Thus, the estimates prepared for the years 1967 to 1970, based on the 1966 Census, will be adjusted to the populations recorded by the 1971 Census. Such revisions are expected to be available in the spring of 1972 and may be secured from the Census Division of Statistics Canada on request.

## Section 3.—The Native Peoples of Canada\*

### The Indians

The 244,023 persons registered as Indians by the Department of Indian Affairs and Northern Development are persons who are entitled to be so registered in accordance with the provisions of the Indian Act. They are grouped for the most part into 558 bands and occupy or have access to 2,200 reserves having a combined area of 6,231,174 acres, distributed among the provinces as shown in Table 1. The 29 Indian bands in the Yukon and Northwest Territories are located in 59 settlements that have not been formally designated as reserves, and no permanent residents of Newfoundland are registered under the Indian Act.

\* Prepared by the Indian-Eskimo Bureau, Department of Indian Affairs and Northern Development, Ottawa.

### 1.—Number of Indian Bands, Reserves and Settlements, and Area of Lands in which Bands have a Recorded Interest, by Province, as at Mar. 31, 1971

**Administration.**—Pursuant to the British North America Act, the administration of Indian affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada in 1867. From January 1950 to December 1965, Indian affairs were the responsibility of a Branch of the Department of Citizenship and Immigration. By legislation passed in 1966 (RSC 1970, c. I-7) a new department was formed whereby the Indian Affairs Branch joined with part of the Department of Northern Affairs and National Resources to become the Department of Indian Affairs and Northern Development. This Department is composed of a headquarters staff at Ottawa, eight regional offices, and a varying number of district offices and field agencies. Attached to the headquarters and regional and district offices are specialists in such matters as education, economic and resource development, community affairs, social assistance, and engineering and construction.

**Education.**—The key to continual progress in Indian education is the active participation of the Indians themselves through their school committees and membership on school boards, strengthened by support from non-federal governments and from professional groups concerned specifically with the classroom instruction of Indian students. Although the Education Branch of the Department of Indian Affairs and Northern Development maintains and operates a number of schools for Indians, of the 66,707 Indian students in elementary and secondary schools in 1969-70, 38,837 attended non-federal schools, a system arranged for the most part through agreements between the Branch and individual school boards. In Manitoba, British Columbia and New Brunswick, however, under agreement with the respective provincial governments, a uniform tuition fee is paid for Indian students attending schools under the jurisdiction of the province. Federal financial assistance for Indian students attending non-federal schools varies from payment of tuition fees to full maintenance. Promising senior students are awarded scholarships to attend university or vocational school, and scholarships are given to those who show promise in the arts.

Federal schools for Indian children are in operation in all provinces except Newfoundland and school residences care for children who, because of isolation or other reasons, are unable to attend local schools. A two-year kindergarten program gives a head start to children who will receive classroom instruction in a language other than their mother tongue. This program is viewed as a major step in reducing premature withdrawal from school and age-grade retardation. The 1969-70 kindergarten enrolment in both federal and non-federal schools was 6,781.

### 3.—Enrolment of Indian Pupils in Elementary and Secondary Non-federal Schools classified by Grade and by Province, School Year 1969-70

**Band Management.**—Community development agreements are being concluded with Indian associations, provincial governments, and the Federal Government for representative Indian associations to take over the administration of the community development programs in their various provincial areas as these associations see the need, request the authority to take on the responsibilities involved and are prepared to do so. The first agreement was made in 1969 with the Manitoba Indian Brotherhood and similar arrangements have since been concluded with Indian associations in Nova Scotia, New Brunswick, Saskatchewan and Alberta. In 1970-71, \$938,000 was given to Indian associations to carry out this work. In Ontario there exists a federal-provincial community development agreement extending provincial services to the Indian people, with costs shared on a population basis where both Indians and non-Indians are involved.

Community development programs have led to a much closer involvement of Indian people in their own affairs and many bands across the country are developing their own management and administrative organizations. A grants-to-bands program makes it

An agreement giving the Union of New Brunswick Indians authority to organize community development services for 4,423 Indians living on 14 reserves in New Brunswick is signed by the Minister of Indian Affairs and Northern Development and the President and Executive Vice President of the Union. Similar agreements were previously signed with Manitoba, Saskatchewan, Alberta and Nova Scotia Indian associations.

possible for participating bands to operate and administer programs with financial and advisory assistance from departmental staff. Expenditures under this program increased from \$1,299,245 in 1968-69 to \$2,728,290 in 1970-71 for band administrative expenses, including recreation and library grants, and from \$3,548,440 to \$16,630,272 for program funds turned over to Indian bands to administer. These include money for operating their own housing programs, school maintenance and transportation, welfare, road building and maintenance, utilities, policing, fire prevention and protection, etc. In 1968-69, 200 bands participated in the program and in 1970-71, 323 bands were involved. In the latter year, training courses were carried on continually in all provinces in such fields as leadership, human resource development, education, band government, homemaking and folk activities, and in many related areas. Administration and managerial functions were stressed, including municipal aspects such as fire, police, health, housing, recreation, roads and bridges, welfare budgets and estimates. These courses involved 5,000 Indian people and 50 departmental staff, for an estimated 15,000 man-days.

**Cultural Development.**—In recent years, encouragement has been given to the Indian people to develop and perpetuate their own culture. Grants totalling \$543,741 in the period 1965-70 have been given to individuals, groups and organizations for the development of fine arts and crafts, literature, folk songs, dancing and related activities. Linguists are contracted to write such languages as Micmac, Mohawk and Algonquin, so that eventually the Indians may read and write in their own language.

**Community Improvement.**—The Department through its Community Affairs Branch assists with the physical development of Indian communities which involves community planning on reserves, housing accommodation, water and sanitation, electrification, construction and maintenance of roads and bridges, etc. On request, guidance and technical advice is provided and financial assistance is given for securing the services of consultants.

Although Indian bands are expected to make the greatest possible contribution from band funds toward the cost of housing and ancillary services and individuals are also

expected to make the greatest possible personal contributions toward the cost of their own housing, some financial assistance is also available. During 1971, a number of Indian bands and individuals obtained loans from the Central Mortgage and Housing Corporation on the strength of repayment guarantees given by the Minister of the Department. There were 1,856 new housing units constructed on Indian reserves in the year ended Mar. 31, 1971. The Department administers three basic housing programs on reserves and one off-reserve housing program, described as follows:—

1. Subsidy housing program..... Direct subsidy by the Federal Government through the Department.
2. Band-administered housing program... Band councils may, by resolution, request authority to administer federal appropriation, either as the sole source of financing or in conjunction with band funds and housing loans from the Central Mortgage and Housing Corporation.
3. Indian on-reserve housing program.... Individual housing loans, guaranteed by the Minister, from the Central Mortgage and Housing Corporation as the sole source of financing or in conjunction with band funds or federal subsidy.
4. Indian off-reserve re-establishment housing program..... Indians who obtain employment away from their reserves and who wish to live in non-Indian communities may obtain mortgage loans from the Central Mortgage and Housing Corporation or approved lenders in conjunction with forgivable mortgage loans from the Federal Government.

The Department continues to place emphasis on overcoming the isolation of many reserves by the building and upgrading of roads which are essential in facilitating the movement of Indian people between Indian and non-Indian communities for purposes of employment and marketing and participation of Indian children in off-reserve school programs. Where necessary and economically feasible, capital grants are made to provincial governments or their electric power commissions for the building of power lines to reserves and for the installation of water supply and sanitation systems. In isolated areas where the Indian people are unable to provide a supply of potable water by their own resources, they are assisted with the digging or drilling of wells and with the acquisition of either hand pumps or individual pressure systems.

**Economic Development.**—The Department, through its Indian and Eskimo Economic Development Branch, assists individuals and bands in their efforts to create business and employment opportunities in service and secondary industries and in areas of resource utilization and land development, including the development of mineral resources on Indian reserves. Many of these programs are conducted in co-operation with other Federal Government departments, provincial governments and private organizations. Assistance is in the form of loans, grants, loan guarantees, technical and management advice, and specialized training. The loans, grants and guarantees are provided from the Indian Economic Development Fund, capitalized at \$19,050,000 for the year ended Mar. 31, 1972. In addition, the Branch has 1971-72 appropriations totalling \$14,845,000 to be used for the encouragement of economic activity through the provision of basic infrastructure and professional and technical services. The Branch also administers the Indian reserves and surrendered lands as well as certain categories of Indian estates.

**Social Services.**—Indians, like other Canadians, are eligible for benefits from a number of welfare programs which are administered by different levels of government, Indian bands and private agencies. Like other Canadians, not all Indians have the same programs available to them, for some programs vary between and within provinces and on and off reserves.

Some Indian bands administer social assistance and child care for persons living on the reserve of the band. The criteria of eligibility and rates of payment for social assistance are generally based on those of the province in which the band is located. Family allowances, youth allowances, old age security and the guaranteed income supplement are paid to Indians by the Department of National Health and Welfare on the same basis as they are paid to other Canadians.

Indians are eligible for benefits from some, but not all, provincial welfare programs except in the Northwest Territories. Generally speaking, the provincial programs from which Indians are eligible for benefits are programs for specific categories of persons, such as the blind. Benefits from less specific programs, such as social assistance, are not generally available to Indians living on reserves, although they are in some parts of some provinces.

The federal Department of Indian Affairs and Northern Development provides social assistance, care for children and care for physically handicapped adults for Indians where these are not available from other sources. The criteria of eligibility and the rates used in calculating the amount to which an applicant for social assistance is entitled are based on those of the provinces in which the person applies for assistance.

**Indian Consultation and Negotiation.**—The proposals put forward in the 1969 Statement of the Government of Canada on Indian Policy were strongly criticized and rejected by most of the Indian people. This rejection extended to the Indian Consultation and Negotiation Group which had been formed during the late summer of 1969 to undertake consultation and negotiation with the Indians in respect to the Government's proposal. The Indians sought a different type of consultative structure, one that allowed direct dialogue at the political as well as the administrative level between the Indians and the Government of Canada. The Government reacted favourably—the Indian Consultation and Negotiation Group was phased out and discussion commenced with the Indians in regard to the format of a new consultative mechanism.

During 1970, considerable effort was made to develop criteria and procedures to enable the Government to respond to the needs of Indian groups to meet together and formulate their views and opinions and to prepare counterproposals. Discussions are continuing with other government departments that also provide funds to Indian groups and with the National Indian Brotherhood as to the best method of assisting the Indian association financially and to what degree. Substantial funds, in the form of per capita grants to assist in the organization and operation of association headquarters and financial contributions for all aspects of consultation and intercommunication, were made available to the various provincial brotherhoods and unions and to the National Indian Brotherhood as follows:—

<i>Brotherhoods and Unions in—</i>	<i>Per Capita Grant</i>	<i>Consultation Funds</i>	<i>Total</i>
	\$	\$	\$
Prince Edward Island.....	435	—	435

TOTALS.....	504,771	1,154,087	1,658,858

**Research and Liaison.**—A Research and Liaison Branch of the Department was formed during the latter part of 1970 to develop stronger liaison with Indian bands and

associations, carry out the research activities of the Indian-Eskimo program and collect and analyse data on Indian and Eskimo program activities. The Indians have expressed a desire to administer many activities at the band level and still others at the association level. Responsibilities for local administration and for economic and community development are being progressively transferred to the Indians themselves but such transfer presents difficulties that will not be easily or inexpensively met. Transfer techniques, financial arrangements, agreements and training programs are being developed and implemented in preparation for the federal staff to be phased out when the Indians are trained and competent. It is the task of the Branch to maintain and improve the reasonably effective dialogue that has been developed with most of the Indian associations.

A hundred years of federal administration of Indian affairs has left in its wake known problems pertaining to lands, treaty rights and other Indian rights, and others are in the course of identification by Indian research groups. Pressure is being exerted by the Indians to have many of these problems reviewed and a unit has been established to direct and co-ordinate the work, using a task-force approach to the problems.

The Program Information Unit acts as a focal point for program information of interest to Indian people. It is assembling descriptive and statistical information concerning the Department's programs, which will later be assessed, related and disseminated both inside and outside the Department. This work will be extended as may be appropriate to include programs of other agencies—federal, provincial and private—which might be of benefit to the Indians.

### **Eskimos**

Most of Canada's 17,000 Eskimos live in communities in the Northwest Territories and smaller numbers in Arctic Quebec (3,800), Labrador (1,300) and Manitoba (150). Since 1955, when the Federal Government began to take a more active interest in the North, considerable progress has been made toward improving the health standards, medical care and education of these northern people and toward establishing permanent communities in which such services can be offered.

As a result of a higher standard of living, the Eskimo birth rate is increasing from year to year. In 1970 it was 55 per 1,000 Eskimo population compared with the Canadian average of 18 per 1,000. In 1970, 95 p.c. of the school-age Eskimo children were in school, most of them in community schools in which grades one to six are taught. Those who continue their education move to larger communities to attend secondary or vocational schools. There are seven high schools in the Northwest Territories. Vocational schooling is available in Yellowknife and Frobisher Bay and pre-vocational courses are given in Churchill, Man. When Eskimo children must leave their communities to continue their education, the Government provides transportation, room and board, clothing, and a weekly allowance. A number of Eskimos have learned trades and special skills and have become pilots, authors, heavy equipment operators, classroom assistants, hairdressers and nurses' aides. Two Eskimos are members of the Northwest Territories Council (see p. 130) and many others are active in local community organizations. It appears now that Eskimo students are reaching an educational level that will allow them to continue their education and training beyond present grades and thereby to gain employment, to engage in certain business tasks, to take part in politics, and to travel with confidence in the South. Although school instruction has been in English, the Eskimo language is now being emphasized, especially in the lower grades.

Although many Eskimos still exist on what they earn from hunting and trapping, an increasing number work for wages or are engaged in cottage industry. Co-operative efforts in canning and marketing gourmet Arctic foods, in manufacturing parkas and in producing handicrafts and sculpture netted the co-operatives over \$2,000,000 in 1970. Working in local stores, with mining companies or for the Government are other common employments. Since new industries will be needed in the future to provide employment, the Federal and the Northwest Territories Governments carry out economic surveys to

Pond Inlet families arrive at church on toboggans towed by snowmobiles. In this and other small Eskimo settlements in the Northwest Territories, the traditional dog team is fast disappearing as a means of transportation.

Two Eskimo members of the staff of Canadian Arctic Producers, a wholesale marketing organization for Eskimo arts and crafts, present a green serpentine hawk to Her Royal Highness Princess Margriet of the Netherlands following the opening of an exhibit of carvings and prints at The Hague. The hawk was carved by Oshoowetak of Cape Dorset.

pinpoint possible areas of development. They offer incentives to those who wish to develop the North and have set up machinery to encourage developers to employ native workers.

A five-year northern housing program was initiated by the Federal Government in 1965 and, since then, 1,484 three-bedroom houses have been provided for Eskimo families. The rent paid by the Eskimos for these houses covers basic services such as electricity, water, fuel oil and garbage collection. Regular payments toward the purchase of the houses can be made.

Medical care is the responsibility of the Department of National Health and Welfare. There are 10 hospitals in the Northwest Territories, 19 nursing stations, eight health stations and six health centres. Eskimos requiring care are flown to medical centres by the Government if there is no such centre in their community.

Responsibility for education, welfare, municipal services and other "provincial-type" functions in the Northwest Territories has been transferred from the Federal Government to the Territorial Government in Yellowknife (see p. 127). The Department of Indian Affairs and Northern Development continues to manage the natural resources of the Northwest Territories.

## Section 4.—Statistics of World Population

World population figures given in Table 6 are from the *United Nations Population and Vital Statistics Report* for January 1971 and, except as otherwise noted, are mid-year estimates for 1969. Area figures are from the *United Nations Statistical Yearbook 1969*.

**Estimated Population of the World by Continent.**—The following statement presents estimates of the 1969 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries because they include, in addition, adjustments for over- and under-enumeration, over- and under-estimation, and data for categories of population not regularly included in the official figures.

<i>Continental Division</i>	<i>Population</i>

PART I.—IMMIGRATION AND EMIGRATION\*

Section 1.—Immigration Policy and Administration

**Policy.**—Traditionally, Canada has sought to increase its population through immigration in order to expand the domestic market, reduce per capita costs of administration, stimulate economic activity by providing new skills, ideas and enthusiasms, and support a higher level of cultural independence and creativity. Canadian experience indicates that a substantial volume of immigration is highly desirable but new population cannot be added haphazardly without regard to their means of subsistence or their effect on Canadian life. Technological change and the development of Canadian society to its present complex state require that, to be able to establish themselves successfully, new settlers must be economically competitive in terms of education, training, skills and personal qualities. Over the years, Canada has endeavoured to acquire immigrants who were adaptable to Canadian life. Such persons, finding familiar institutions in Canada, feel more at home and this assists in their establishment in the new life they find here. Canada makes every effort to sustain the movement of immigrants from countries having like economic, social and political backgrounds but people anywhere in the world may immigrate to Canada if they demonstrate their suitability for life in this country and are likely to become established without hardship to themselves or disruption to the communities in which they settle.

It may be mentioned also that Canada, in addition to welcoming immigrants, has on many occasions during the past quarter-century sanctioned the entry of groups of refugees. This is a humanitarian movement and is tangible evidence of Canada's recognition of its responsibilities in the international community. A conservative estimate of the number of refugees admitted since 1945 is 350,000.

On Oct. 1, 1967, Canada adopted new Immigration Regulations which are applied universally; these evolved from a White Paper on Immigration, tabled in the House of

\* Sections 1 and 2 of this Part were revised by the Secretariat Section of the Canada Immigration Division, Department of Manpower and Immigration, Ottawa. The history of immigration and the Immigration Act and Regulations up to the mid-1950s is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176.

Commons on Oct. 14, 1966. After study by a Joint Committee of the Senate and the House of Commons and their consideration of representations by Members of Parliament, representatives of provincial governments, private organizations and individuals, the Regulations were authorized by Order in Council (PC 1967/1616). These Regulations present in detail the principles involved in selection of immigrants, and indicate the factors that immigration officers must take into account in assessing potential immigrants.

The assessment system for potential immigrants is based on the following factors: (1) *Education and Training*—up to 20 assessment units to be awarded on the basis of one unit for each successful year of formal education or occupational training; (2) *Personal Assessment*—up to 15 units on the basis of the immigration officer's assessment of the applicant's adaptability, motivation, initiative and other similar qualities; (3) *Occupational Demand*—up to 15 units if demand for the applicant's occupation is strong within Canada, and whether the occupation is skilled or unskilled; (4) *Occupational Skill*—up to 10 units for the professional, ranging down to one unit for the unskilled; (5) *Age*—10 units for applicants under age 35 with one unit deducted for each year over age 35; (6) *Arranged Employment*—10 units if the applicant has a definite job arranged in Canada; (7) *Knowledge of French and English*—up to 10 units, dependent upon the degree of fluency in French and/or English; (8) *Relative*—up to five units if the applicant has a relative in Canada able to help him become established but unprepared or unable to sponsor or nominate him; and (9) *Employment Opportunities in Area of Destination*—up to five units if the applicant intends to go to an area of Canada where there is a generally strong demand for labour.

The Regulations formally confirm that Canadian citizens or permanent residents are entitled to bring their dependants to Canada, making a clear distinction between dependants and relatives entering the working force. Thus, there are three categories of immigrants—"sponsored dependants", "nominated (non-dependent) relatives", and "independent applicants". A "dependant" is defined for immigration purposes as: husband or wife, fiancé or fiancée; unmarried son or daughter under age 21; parent or grandparent over age 60, or younger if widowed or unable to work; an orphaned brother, sister, nephew, niece or grandchild under age 18. Provision is also made for an adopted child and, where the only dependant is a husband or wife, for the nearest living relative. An application for a dependant is dealt with irrespective of whether he is in Canada or abroad and irrespective of the financial circumstances of the sponsor. He will be admitted to Canada provided he is in good health and of good character.

The "nominated (non-dependent) relative" category includes son or daughter over age 21, married son or daughter under age 21, brother or sister, parent or grandparent under age 60, nephew, niece, uncle, aunt or grandchild. The responsibilities of the nominator include willingness and ability to provide accommodation, care and maintenance for the person applied for and to otherwise assist him in becoming established. The nominator is required to sign such an undertaking for a period of five years. Because of the assistance provided by the nominator in Canada, the nominee is assessed on only some of the selection factors—education, personal qualities, occupational demand, age and occupational skill. On the general assumption that a Canadian citizen usually will be better established in Canada than a more recent arrival and hence in a better position to give his relative more assistance, a slightly higher preference is given to a relative nominated by a Canadian citizen than to one nominated by a permanent resident.

To qualify for admission to Canada, an "independent applicant" normally must obtain 50 of the 100 assessment units available, although it is possible to combine factors in such a way that some of them may compensate for relatively low qualifications in others. The major purpose of the standards is to select immigrants who can make a successful adjustment to life in Canada and thereby contribute to the country's progress.

The main factors for successful establishment are education, personal qualities and occupational demand. As far as the education of the individual is concerned, the principle of successful educational achievement in the immigrant's home has been adopted since it has been found impracticable to equate educational standards in many countries to

Canadian standards. In assessment of his personal qualities, the applicant will be considered as to his chances for success in Canada in terms of his economic establishment and his personal satisfaction as well as on the composition and the attitudes of his whole family. The personal assessment process also includes the function of counselling and the applicant is informed about the market in different areas of Canada for his skills and about the difficulties he may encounter in adjusting to the Canadian way of life. The demand in Canada for the applicant's skill or occupation is given due importance. The Department is responsible for immigration but is equally concerned with manpower and is obliged to discourage immigration for the applicant with an occupation for which there is little or no demand in this country. Where there are shortages of labour in certain industries, Canadian employers or provincial officials may interview candidates abroad for such industries and channel them to the Department's visa offices but these candidates also must comply with the selection standards.

The other six selection criteria have individually lesser weight but in total are equal to the three main factors. In considering adaptability in a new environment, occupational skill is important. A person's skill is usually acquired at a price in financial terms. It is an investment and the higher the investment usually the higher the skill and thus the greater the gain to Canada. Age must be taken into account when considering adaptability in a new environment. On average, younger people adjust more easily and for this reason the age group up to 35 years is assigned the maximum number of assessment units, with one unit deducted for each year over 35. However, an older person is not refused on this factor if he has other assets such as highly developed skills that are in demand in Canada. Credit will be given to an applicant who has a firm commitment from a Canadian employer because this will assist his economic establishment during the initial period after arrival. Economic and social adjustment of a new immigrant is greatly facilitated by knowledge of the languages of his adopted country. As a consequence, units of assessment are given to applicants for the degree of their fluency in either English or French or both. An applicant whose mother tongue is other than English or French may be given some credit for even a partial knowledge of either or both of the two languages. In fact, it is possible that such an applicant may obtain more assessment units on the language factor than a unilingual applicant who speaks only English or French. If an applicant has a relative in Canada who is able to help him become established, credit is given for this factor since the presence of a relative is a definite asset in the adjustment process.

No one is compelled to go to any particular area in Canada but, if a prospective immigrant is counselled by an immigration officer to go to an area that offers the best opportunity for him and is prepared to accept that advice, he is awarded the units appropriate for that area. If the over-all demand for labour is higher in any one area in Canada than in others, the total assessment of the immigrant destined to that area reflects that high demand. The assessment of individual areas in Canada as to their over-all demand for labour, and the assessment of national demand for individual occupations is conducted on a continuous basis so that selection officers overseas are in possession of up-to-date information at all times.

The Regulations provide for the admission to Canada for permanent residence of persons who have come as visitors. However, since open acceptance of applications from visitors would be inefficient and would give an undue advantage to some people, a visitor is not given any credit for arranged employment in Canada, so that he must qualify on other factors. Conditions of entry must have been observed and, in particular, the applicant must not have taken employment in Canada if not authorized to do so. Foreign students studying at recognized Canadian institutions are regarded as any other visitors applying for permanent residence in Canada. However, if foreign students are under an obligation to their government to return to their own country, they are not permitted to apply for permanent residence in Canada. Applications for permanent residence from seamen on shore leave are not accepted.

A Canadian citizen sponsor whose application for the admission of a dependant is refused or an immigrant who has been ordered deported has the right to appeal to an independent Immigration Appeal Board, the establishment of which was authorized by Act of Parliament in 1967. The Board is a Court of Record, entirely separate from the Department and with the authority to enforce its orders.

**Administration.**—The Canada Immigration Division of the Department of Manpower and Immigration administers the Immigration Act and Regulations. The Division has three main Branches. The Programs and Procedures Branch is responsible for the long- and short-range planning of immigration policies and programs, interpretation of the Immigration Act and Regulations and immigration policies, the co-ordination of immigration policies developed internally, functional support in respect of the transportation and initial reception of immigrants in Canada and liaison with transportation companies. The Home Services Branch is responsible for the disposition of difficult individual immigration cases, the provision of procedural guidance to field officers, the formulation of policies and guidelines on the enforcement aspects of immigration operations, and the provision of technical advice on procedures relating to the admission of immigrants and non-immigrants. The Foreign Branch is responsible for the management of the Overseas Service, uniform application of selection standards, promotional activities abroad, implementation of approved programs abroad and the proper counselling and direction of immigrants.

There are 36 visa-issuing offices located abroad—at London, Manchester, Birmingham, Glasgow, Belfast, Dublin, Paris, Bordeaux, Marseille, Brussels, Berne, The Hague, Copenhagen, Cologne, Hamburg, Stuttgart, Vienna, Budapest, Belgrade, Stockholm, Lisbon, Madrid, Rome, Milan, Athens, Cairo, Tel Aviv, Beirut, New Delhi, Islamabad, Tokyo, Hong Kong, Manila, Sydney, Port of Spain and Kingston (Jamaica). Information offices visited at intervals by immigration officers based in Stockholm or in Copenhagen are maintained in Oslo and Helsinki. Three offices in the United States—at New York, Chicago, and San Francisco—provide information and counselling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding their prospects for successful establishment in this country. Examination of immigrants and visitors is carried out at 547 ports of entry on Canadian coasts, at points along the International Boundary, and at certain airports and inland offices.

## Section 2.—Immigration Statistics

Table 1 shows the number of immigrants arriving in Canada in each year since 1913, the peak year of immigration into the country.

### 1.—Immigrant Arrivals, 1913-70

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

1923.....	133,729	1935.....	11,277	1947.....	64,127	1959.....	106,928		
1924.....	124,164	1936.....	11,643	1948.....	125,414	1960.....	104,111		

The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes several months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

In the early 1960s, the Canadian economy experienced a levelling-off, and even a retrenchment in some areas, from its previous high level of activity and this was reflected in the country's intake of immigrants. However, this interval of economic adjustment lasted only a short time and by 1963 immigration had again risen to more normal levels. In that year, 93,151 immigrants came to Canada compared with 74,586 the year before. Promotional efforts abroad were intensified. A resident immigration officer was posted to Madrid to service immigration applications in Spain and area offices were established to enable teams of immigration officers to make regular visits to adjoining countries in an effort to broaden the base from which immigrants were selected.

In the following year, the number of immigrants admitted to Canada totalled 112,606, a 21-p.c. increase over 1963. By nationality, British immigrants constituted the largest number, followed by Italians and citizens of the United States. This increase was attributable to two principal factors—an intensification of promotional and recruiting activities in the main source countries, and an expansion of examination and selection facilities into areas from which Canada received few immigrants before the establishment of the Immigration Regulations that came into effect early in 1962. The achievements of 1964 were accomplished despite strong competition in Europe for skilled and educated workers and new postwar levels of prosperity. It is, therefore, of considerable significance that, of the 56,190 immigrants who entered the Canadian labour force in that year, 59 p.c. were in the more skilled categories; 13,177 were in the managerial, professional and technical categories, compared with 10,799 in 1963. In 1964, a resident immigration officer was posted to Marseille to expand facilities in France.

In 1965, Canada's demand for skilled immigrant workers once again exceeded the supply. Although skilled workers could be absorbed in large numbers, the need for unskilled workers diminished and for this reason the (then) Immigration Branch continued to emphasize the selection of immigrants possessing professional or other qualifications that would enable them to become established soon after their arrival. Most of the traditional immigrant source countries, particularly in Europe, continued to enjoy buoyant economic conditions. Skilled workers were much in demand and there was strong competition among immigration countries for a share of those skilled workers who were interested in emigration. The number of immigrants admitted to Canada totalled 146,758, a 30-p.c. increase over the preceding year. Immigrant workers who arrived numbered 74,195, of whom 67 p.c. were in the more skilled categories; those in the managerial, professional and technical categories numbered 18,382. As in the previous year, the major source countries were Britain, Italy and the United States. During 1965, Canadian immigration facilities abroad were substantially improved and expanded. Resident officers were posted to Milan, Italy, and Bordeaux, France, and offices at five other locations were modernized and refurbished.

The rising trend of immigration continued in 1966. In all, 194,743 immigrants came to Canada in that year, an increase of 33 p.c. over 1965. Immigrant workers numbered 99,210, of whom 74 p.c. were in the more skilled categories compared with 67 p.c. in 1965. Those in managerial, technical and professional categories numbered 25,929, which was almost 43 p.c. above 1965 and nearly double the 1964 figure. Of the total of 194,743 immigrants, 63,291 came from Britain, 31,625 from Italy and 17,514 from

the United States. There were significant developments in immigration administration and policy during the year. Briefly, as a result of the reorganization of several Federal Government departments, the Immigration Branch of the former Department of Citizenship and Immigration was amalgamated with large segments of the Department of Labour to form the new Department of Manpower and Immigration. The principal advantages to this alignment were that immigration became more closely identified with national manpower policies, and the extensive services of the Canada Manpower Division in counselling, placing and assisting workers became fully available to new immigrants (see p. 222). A policy for dealing with requests from visitors for permanent residence in Canada was introduced with good effect.

In 1967, the second largest number of immigrants arrived in Canada since the end of the Second World War. Of the 222,876 immigrants who came—representing an increase of 14 p.c. over 1966—119,539 were workers of whom 87 p.c. were in the more skilled categories compared with 74 p.c. in 1966. Those in the managerial, professional and technical categories numbered 33,876, a figure 31 p.c. above 1966. Of the total of 222,876 immigrants, 62,420 came from Britain, 30,055 from Italy and 19,038 from the United States.

Developments in Europe, including a more buoyant economy, and conditions in Canada have had a significant influence on trends in immigration since 1967. A lessening desire on the part of Europeans to migrate to Canada reduced the number of immigrants in 1968 to 183,974, in 1969 to 161,531, and in 1970 to 147,713. In addition, a strong trend in immigration patterns emerged, highlighted by an increase in the proportion of immigrants from North America, Asia and the West Indies. Britain provided 17.9 p.c. of the immigrant arrivals in 1970 compared with 19.8 p.c. in 1969 and continued to be the major source country but the flow from the United States increased to 16.5 p.c. from 14.1 p.c. in the same comparison. Italy accounted for 5.8 p.c. compared with 6.4 p.c. in 1969. Europe remained the major source area in 1970 but showed the largest reduction.

Analyses of the content of the immigration movement during the years 1968, 1969 and 1970 are given in Tables 2 to 8, and the numbers of persons deported from Canada for various reasons for 1966-70 in Table 9.

Table 2 classifies immigrant admission by country of former residence. During the three-year period shown, 20.3 p.c. of the immigration flow came from Britain and the Republic of Ireland, 36.9 p.c. from Continental Europe, 13.7 p.c. from the United States and 29.1 p.c. from all other countries. Comparable figures for 1967-69 were 24.1 p.c., 40.3 p.c., 11.0 p.c. and 24.6 p.c., respectively.

Of the immigrant arrivals in 1970, 39.1 p.c. were born in Commonwealth countries or in the Republic of Ireland compared with 39.7 p.c. in 1969 and 33.4 p.c. in 1968, 10.2 p.c. were born in Italy or Greece, 5.4 p.c. in Germany, France or the Netherlands, 14.1 p.c. in the United States, 6.4 p.c. in Spain or Portugal and 5.6 p.c. in Poland or Yugoslavia.

Sex distribution of recent immigrant arrivals is shown in Table 5. In the five years 1966-70, adult males comprised 37.5 p.c. of the immigrants, adult females 36.5 p.c. and children under 18 years of age the remaining 26.0 p.c. Without relation to age, 49.1 p.c. of the newcomers were females.

The number of female immigrants coming into Canada was higher than the number of male immigrants in every year from 1957 to 1964; since then, with the exception of 1969, the trend has been in favour of males. During 1970, in the single category, males outnumbered females by 6,648 whereas in the married category females exceeded males by 2,442, in the widowed category by 2,923 and in the divorced and separated category by 482. Of all persons arriving in 1970 who were 15 years of age or over, 52.4 p.c. were married, 42.1 p.c. were single and 5.5 p.c. were widowed, divorced or separated.

**Destinations and Occupations.**—Upon arrival in Canada, immigrants are asked to state their intended destinations. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period 1968-70—53.0 p.c. of all the males and 53.8 p.c. of all the females. Quebec was the second province of destination, receiving 17.9 p.c. of the males and 17.3 p.c. of the females, followed by British Columbia with 13.3 p.c. of the males and 13.5 p.c. of the females. The proportions intending to settle in the Prairie Provinces were 13.0 p.c. and 12.7 p.c., respectively, and in the Atlantic Provinces 2.5 p.c. for both males and females. The provincial distribution has changed little from year to year over the past two decades.

In like manner, immigrant arrivals are asked to record the occupations they intend to follow in Canada. Approximately 52.6 p.c. of the persons admitted in 1970 declared that they would enter the labour force. The other 47.4 p.c. were wives, children and other dependants or were retired persons. Of the male workers 34.3 p.c. were classed as managerial, professional and technical, 6.8 p.c. were clerical workers, 6.1 p.c. were in service and recreation occupations, 36.8 p.c. were in manufacturing, mechanical and construction trades, 3.1 p.c. were general labourers and 4.0 p.c. were farmers. About 18.2 p.c. of the female immigrants entering the labour force intended to follow service and recreation occupations. These percentages were little changed from those for 1969.

**Deportations.**—Deportations by cause and nationality are shown in Table 9 for the years 1966-70. Persons who have not yet acquired domicile (five years of residence in Canada as landed immigrants) may be deported if they fall into prohibited classes at time of admission or within five years of admission, if they have engaged in commercialized

vice, have been convicted under the Criminal Code or have become inmates of prisons, or have gained admission by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

## Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 10 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1961-70 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of border-crossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 13,804 Canadian-born persons entering the United States in the year ended June 30, 1970 with the intention of remaining permanently, 6,243 were males and 7,561 females. Nearly one fifth, or 2,703, of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 13,804 native-born persons was the professional or technical group which numbered 1,476; clerical and kindred workers numbered 622, and craftsmen or foremen numbered 608. On the other hand, 9,522 persons, or 69.0 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 48.2 p.c. of the total were persons under 20 years of age.

Of the 26,850 persons entering the United States from Canada claiming Canada as country of last permanent residence—which of course includes native-born persons and those born in other countries who have resided in Canada—the Immigration and Naturalization

Service of the United States Department of Justice lists 4,573 as professional, technical and kindred workers, 2,258 as craftsmen, foremen and kindred workers and 1,447 as clerical and kindred workers. Housewives, children and others with no reported occupation accounted for 14,346 or 53.4 p.c. of the total.

**10.—Canadian-Born Persons Entering the United States from Canada and Elsewhere, and All Persons Entering the United States from Canada, Years Ended June 30, 1961-70**

NOTE.—Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text above). SOURCE: Immigration and Naturalization Service, United States Department of Justice.

## PART II.—CANADIAN CITIZENSHIP

### Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act, which came into force on Jan. 1, 1947\* replacing previous Naturalization Acts, created the distinct nationality of a "Canadian citizen" to be recognized throughout the world and it provided a means whereby those non-Canadian British subjects and aliens who were permanently residing in Canada or those who might subsequently immigrate to Canada could apply for the grant of Canadian citizenship. Administration of Canadian citizenship is under the jurisdiction of the Department of the Secretary of State, Citizenship Registration Branch.

Over the years the Citizenship Act has undergone several amendments, the latest on July 7, 1967. The provisions of the Act, including the 1967 amendments, are outlined briefly in the following paragraphs.

**Natural-Born Canadian Citizens, Born before Jan. 1, 1947.**—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born of Canadian fathers outside of Canada who were not aliens on Jan. 1, 1947 and were either minors on that date or had already entered Canada for permanent residence.

The Act provides that a person born abroad who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

\* Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

*In innumerable ways and wherever they are needed, time and talents are voluntarily given by people of all ages who are concerned with the betterment of life for all within the community.*

*Many under-privileged and fatherless boys are given a new outlook and a sense of security by a "Big Brother".* →

*Teen-age girls are happy to spend their summer holidays assisting in hospitals.* ↓

*Three- and four-year-olds with speaking, learning and playing problems respond to attentions given by young volunteers.* ↓

*A volunteer teacher's aid helps a newly arrived Japanese student with his English.*

*A service club volunteer works with a mentally retarded child, teaching her to recognize colours.*

**Natural-Born Canadian Citizens, Born after Dec. 31, 1946.**—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

**Newfoundland and Canadian Citizenship.**—On Apr. 1, 1949, Newfoundland became the tenth province of Canada and every person born therein or naturalized or every British subject who had domicile in Newfoundland on that date or every woman who married a citizen of Newfoundland and took up residence there before Apr. 1, 1949 became a Canadian citizen. They acquired the right of conferring Canadian citizenship by descent to their children born outside of Newfoundland in the same manner as those who had previously become Canadians. Persons born outside of Newfoundland to Newfoundland parents are natural-born Canadian citizens provided they were either minors on Apr. 1, 1949 or had before that date been lawfully admitted to Canada or Newfoundland for permanent residence. However, a person who was a minor on Apr. 1, 1949, ceased to be a Canadian on his 24th birthday or on July 1, 1968, whichever is the later date, unless he has his place of domicile in Canada at such date or has before such date, and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship. A person born outside of Canada to Newfoundland parents after Mar. 31, 1949 is a natural-born Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases. A person who becomes a natural-born Canadian in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada on that date.

**Canadian Citizens other than Natural-Born.**—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

**Acquisition of Canadian Citizenship by Aliens or British Subjects.**—An adult non-Canadian British subject or an alien who wishes to become a Canadian must formally file an application for citizenship. The non-Canadian British subject may file an application direct with the Registrar of Canadian Citizenship, whereas an alien must file an application through his local court, or through one of the special citizenship courts now established or, if he lives more than 50 miles from a court, he may mail his application to the Registrar of Canadian Citizenship in Ottawa, who will file it with the appropriate court. After the application has been 'posted' for three months, he shall appear before the court for examination. In either case the same requirements are generally applicable:—

- (1) He must have resided in Canada for 12 of the 18 months immediately preceding the date of his application.
- (2) He must have been lawfully admitted to Canada for permanent residence and either have acquired Canadian domicile before July 7, 1967, or have resided in Canada for five of the eight years immediately preceding the filing of his application. Persons living in Canada before obtaining "landed immigrant" status may count half of each full year before landing

toward the residence qualification. The wife of a Canadian needs only to be admitted for permanent residence and reside in Canada for one year.

- (3) He must be of good character and not under an order of deportation.
- (4) He must have an adequate knowledge of either English or French or, alternatively, he is the spouse, widow or widower of a Canadian or, either he was 40 or more years of age at the time of lawful admission and has resided in Canada for more than 10 years or he was less than 40 at the time of admission and has resided continuously in Canada for more than 20 years.
- (5) He must have an adequate knowledge of the responsibilities and privileges of citizenship.
- (6) He must intend to comply with the Oath of Allegiance and to have his place of domicile permanently in Canada.

At the conclusion of a court hearing, the decision of the court is forwarded to the Minister responsible for the administration of the Canadian Citizenship Act. If the decision is favourable and a certificate of Canadian Citizenship is granted by the Minister, it is forwarded to the clerk of the court who shall inform the applicant of the date and time he is to appear before the court to take the Oath of Allegiance, renounce his previous nationality and receive his certificate. Where a court finds that an applicant does not possess the required qualifications to be granted citizenship, the Minister, upon receipt of the decision, will so advise the applicant and give him notice that he may, within 30 days of receipt of such notice, appeal the decision to the Citizenship Appeal Court, which is the Trial Division of the Federal Court of Canada. If a court rejects an application and this decision is upheld by the Citizenship Appeal Court or if an application is refused by the Minister, the applicant has the right to file a new application two years after the date of rejection.

**Status of Married Women.**—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

**Status of Minor Children.**—Alien and British subject minor children do not automatically become Canadians with their parents. After one parent has become a Canadian, the responsible parent of that child, his mother if she has *de facto* custody of the child or maintains him, the tutor or the legal guardian of the child may apply for citizenship on the child's behalf. Application is made to the Registrar of Canadian Citizenship, Ottawa. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances.

**Loss of Canadian Citizenship.**—Canadian citizenship may be lost in the following manner:—

- (1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
- (3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.

Prior to the 1967 amendments of the Citizenship Act, a person, other than a natural-born Canadian, who since becoming a Canadian had resided outside of Canada for 10 consecutive years automatically ceased to be a Canadian; this provision for automatic loss has been removed from the Citizenship Act.

*Loss of Citizenship by Revocation—Applicable Both to Non-natural-Born and to Natural-Born Canadians.*—Prior to the 1967 amendments of the Citizenship Act, loss of Canadian citizenship by revocation was limited under certain provisions of the Act only to non-natural-born Canadians. This discriminatory distinction between non-natural-born and natural-born Canadians has been removed from the Citizenship Act and the following substituted: Canadian citizenship may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that *any Canadian citizen* has, when not under a disability, (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage); (2) taken or made an oath, affirmation or other declaration of allegiance to a foreign country; (3) made a declaration renouncing his Canadian citizenship; or (4) obtained Canadian citizenship by false representation or fraud or by concealment of material circumstances.

*Doubt as to Loss of Citizenship.*—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the commission referred to in the Citizenship Act for a ruling and the decision of the commission or the court, as the case may be, shall be final.

## Section 2.—Canadian Citizenship Statistics

The decennial Census of Canada requires that each person state the country to which he owed allegiance and had citizenship rights as at June 1 of the census year. Citizenship of the population, by province, as at the latest census date, June 1, 1971, will be given in Appendix II of this volume if available at the time of going to press. According to the 1961 Census, less than 6 p.c. of the Canadian population on June 1, 1961 reported a country of citizenship other than Canada.

**Citizenship Certificates Issued and Granted.**—Citizenship certificates “issued”, as shown in Table 1, are those issued for various reasons to persons who were already Canadian citizens; certificates “granted” means that the holders became Canadian citizens by the grant of such certificate.

### 1.—Citizenship Certificates Issued and Granted, by Status of Recipient, 1969 and 1970

Certificates			Certificates		
	1969	1970		1969	1970

Adopted or legitimated.....	15	11			

<sup>1</sup> Only those cases reported to the Citizenship Branch by posts abroad.

**Characteristics of Persons Granted Citizenship Certificates in 1970.**—Since 1953, comparable statistics are available showing the characteristics of persons granted citizenship certificates; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality. The number of applicants fluctuates from year to year but it is known that about 40 p.c. of the immigrants who entered Canada during the past ten years who are eligible for Canadian citizenship have become Canadians.

Of the 57,556 persons granted citizenship in 1970, fewer than 2 p.c. had immigrated to Canada before 1931, 6 p.c. in the period 1931-50, 42 p.c. in the period 1951-60 and 50 p.c. after 1960. Regionally, these new citizens were distributed as follows: 2 p.c. in the Atlantic Provinces, 23 p.c. in Quebec, 48 p.c. in Ontario, 12 p.c. in the Prairie Provinces and 15 p.c. in British Columbia. Almost 89 p.c. of them resided in urban centres.

About 30 p.c. of the persons naturalized in 1970 previously owed allegiance to a Commonwealth country, 15 p.c. were former citizens of Italy, 7 p.c. of Germany, 6 p.c. of Greece and 4 p.c. of each of the Netherlands, Yugoslavia and Portugal. Most of the persons designated as "stateless" were born in Poland, the Soviet Union, Yugoslavia, Hungary, Germany, Czechoslovakia or Romania.

Among the males in the labour force naturalized in 1970, craftsmen, production process and related workers occupations were reported by 40 p.c., 20 p.c. were in professional and technical occupations, 12 p.c. were in service and recreation occupations, labourers accounted for 5 p.c., managerial occupations for 9 p.c. and clerical workers and salesmen for 4 p.c. each. Of the females, 44 p.c. were homemakers and, among those employed outside the home, 27 p.c. were in clerical occupations, 25 p.c. were in the craftsmen, production process and related workers occupation group, and 18 p.c. were in service and recreation occupations.

*The interpretation of the symbols used in the tables throughout the Year Book  
will be found on p. vii of this volume.*

Vital statistics provide a key to the interpretation of population development—a measure of the pace at which the population is growing, the rate at which women are marrying and reproducing, and the effect this has on the age and sex distribution of the population, as well as the relative importance of the diseases that cause death each year. Vital statistics constitute the record of births, deaths, marriages and divorces registered in the provinces and territories of Canada. The continuity of such data gives a constant guide to the planning, operation and evaluation of many national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution. The population data upon which vital statistics rates are computed are given on pp. 247-248. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202), *Causes of Death* (Catalogue No. 84-203) and in other regular and special reports; in addition, certain unpublished data are available on request.

\* Revised in the Vital Statistics Section, Health and Welfare Division, Statistics Canada. This Chapter provides data for the year 1969, with comparisons for previous years where appropriate; principal vital statistics for 1970 will be available by the time this volume goes to press and may be found in Appendix III.

## Section 1.—Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces and territories of Canada for five-year periods 1951-65 and for single years 1966-69. Table 2 shows similar data for urban centres having at least 20,000 population at the date of the 1966 Census for the year 1969 with comparative averages for 1961-65.

## 1.—Summary of Principal Vital Statistics, by Province, 1951-69

NOTE.—Figures for neonatal mortality (within the first four weeks of birth) are given on p. 269 and those for divorces on p. 278.

<sup>1</sup> Excess of births over deaths. <sup>2</sup> Deaths under one year of age; deaths within the first four weeks of birth are given on p. 269. <sup>3</sup> Per 1,000 population. <sup>4</sup> Per 1,000 live births. <sup>5</sup> Per 10,000 live births.

## 2.—Summary of Principal Vital Statistics for Incorporated Urban Centres of 20,000 Population or Over,<sup>1</sup> 1969 with Average for 1961-65

NOTE.—Birth, death and marriage rates cannot be computed for 1969 or the period 1961-65 since urban centre populations are not known for intercensal periods. Figures for certain urban places may not be comparable for the periods shown because of changes in area boundaries, particularly for those indicated by an asterisk (\*). Urban centres are designated in this table by the following abbreviations: c. = city, t. = town, vl. = village, b. = borough, s.m. = suburban municipality, and d.m. = district municipality.

## VITAL STATISTICS RATES, 1930 - 70

<sup>1</sup> DEATHS UNDER ONE YEAR OF AGE.<sup>2</sup> DEATHS WITHIN THE FIRST FOUR WEEKS OF BIRTH.<sup>3</sup> PROVISIONAL.

## Section 2.—Births\*

No accurate figures on Canadian crude† birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:—

<i>Intercensal Period</i>	<i>Estimated Average Annual Crude Birth Rate (per 1,000 Population)</i>	<i>Intercensal Period</i>	<i>Estimated Average Annual Crude Birth Rate (per 1,000 Population)</i>
1851-61.....	45	1891-1901.....	30
1861-71.....	40	1901-11.....	31
1871-81.....	37	1911-21.....	29
1881-91.....	34		

The general trend in the national crude birth rate (i.e., per 1,000 total population) since 1930 is shown in the facing chart and since 1951 in Table 1. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930s and during World War II to 24.3 in 1945, and following the War rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but has since been declining and in both 1968 and 1969 reached 17.6, the lowest on record. Part of this decline is attributable to the fact that the crude birth rate is based on *total* population, which now includes larger proportions of 'non-reproductive' population. Even if the annual number of births were to remain stable, the net effect of an increase in population would be a declining crude birth rate.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 and those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record *high* crude birth rates during the 1956-60 period. In 1969, Prince Edward Island, Nova Scotia, Quebec and Saskatchewan had record *low* rates.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest rate in Canada. Since the late 1930s or early 1940s Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 241-242, shows that six provinces—Newfoundland, Alberta, New Brunswick, Prince Edward Island, Nova Scotia and Saskatchewan, in that order—had higher crude rates than Quebec or Ontario in 1966, followed by Manitoba and British Columbia, and that, in 1969, as in the previous year, Quebec had the lowest crude birth rate in the country. However, since these crude rates are based on the *total* population they do not reflect the true fertility of the women of reproductive ages in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 45 (see pp. 252-254).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1969, 130,398 babies were born to Ontario mothers as compared with 95,610 to Quebec mothers. Altogether, 369,647 children were born alive in Canada in 1969, 109,628 fewer than the record 479,275 born in 1959 but 5,337 more than the number born during 1968.

\* Unless otherwise indicated, "births" in this Section refers to infants born alive; stillbirths are dealt with under a separate heading on pp. 256-258 and under multiple births on p. 251. For international comparisons, see Section 7, pp. 284-285.

† A crude rate is one based on the *total* population.

**Sex of Live Births.**—With rare exceptions, wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless, it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930s. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. In 1969, 1,055 male infants were born for every 1,000 females.

#### 6.—Sex Ratios of Live Births, 1951-69

Year	Males	Females	Males to 1,000 Females	Year	Males	Females	Males to 1,000 Females
	No.	No.	No.		No.	No.	No.
1951.....	195,918	185,174	1,058	1964.....	232,657	220,258	1,056
1956.....	231,697	219,042	1,058	1965.....	215,112	203,483	1,057
				1966.....	198,928	188,782	1,054
1961.....	244,403	231,297	1,057	1967.....	189,847	181,047	1,049
1962.....	240,870	228,823	1,053	1968.....	187,489	176,821	1,060
1963.....	238,865	226,902	1,053	1969.....	189,798	179,849	1,055

**Hospitalized Births.**—In 1969, 99.5 p.c. of all Canadian births occurred in hospital as compared with 91.7 p.c. ten years previously. Before the initiation in 1958 of the federal-provincial hospital insurance programs—in which all provinces were participating by 1961—there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Little variation now exists and only in the Yukon and Northwest Territories do the percentages fall below 99.3 p.c.; in the Yukon Territory it was 96.8 p.c. in 1969 and in the Northwest Territories 86.2 p.c.

**Births in Urban Centres.**—Table 2, pp. 243-246, shows the number of births in 1969, as compared with the average for 1961-65, to mothers residing in each urban centre of 20,000 population or over in 1969. Because the populations of urban centres are not known for intercensal years, birth rates cannot be computed for those years.

**Illegitimacy.\***—In 1969, 9.2 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world but has been rising recently, as shown in Table 7. In some provinces the percentages of illegitimate births have more than doubled during the past 20 years. It should be noted that the increase in the proportion of the illegitimate births is attributable to two factors: first, the relative increase in the proportion of women aged 15-24 (in the female population of child-bearing age) where the probability of having an illegitimate birth is the highest; and second, since legitimate fertility has declined sharply in recent years, the relative weight of the illegitimate fertility has increased.

\* The term "illegitimate", as used here, does not refer to all births *conceived* out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

## 7.—Illegitimate Live Births and Percentages of Total Live Births, by Province, 1951-69

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Y.T.	N.W.T.	Canada

**Multiple Births.**—Approximately 1 p.c. of the confinements result in multiple births, and 99 p.c. of the multiple births are twins. One out of about 10,000 confinements results in triplets. Two sets of quadruplets were born in 1960 and one set in each of 1962, 1963, 1964 and 1968 and two sets in 1969. In 1969 a total of 369,648 mothers bore a total of 373,365 infants, of which 369,647, or 99 out of every 100, were born alive.

**Fertility Rates.**—The sex and age composition of a population is obviously an important factor in determining crude birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 45, variations in the proportion of women of these ages to the total population will cause variations in the crude birth rate of different countries—or of different regions within a country—even though the actual rates of reproduction or *fertility* of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married, that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types are compared in Table 9, and indicate the variations in each type as between provinces and the provincial trends over the years 1966-69.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 has been declining for the past few years, dropping from 93.4 in 1966 to 82.4 in 1969. However, the rates varied among the provinces from a high of 149.0 to a low of 70.8 during the past four years; in 1969, Newfoundland, Prince Edward Island, Saskatchewan, Alberta, New Brunswick and Manitoba had the highest rates and Quebec, Ontario, British Columbia and Nova Scotia the lowest, in order of mention. On the other hand, the average annual number of infants born to every 1,000 *married* women in the country as a whole dropped from 133.9 to 117.6 during the same period. According to this measure, the four eastern provinces and Saskatchewan had, on the whole, the highest rates.

9.—Crude Fertility Rates, by Province, 1966-69

Province or Territory	Rates per 1,000 Total Women 15-44 Years of Age <sup>1</sup>				Rates per 1,000 Married Women 15-44 Years of Age <sup>1</sup>

Saskatchewan.....	105.8	99.0	99.1	95.1	144.3	136.2	135.9	131.8
Alberta.....	102.4	100.2	95.2	94.3	134.3	131.5	125.2	124.1
British Columbia.....	87.5	84.0	82.4	83.2	113.0	108.8	106.9	107.8
Yukon Territory.....	125.4	128.3	123.3	154.0	144.5	..	..	..
Northwest Territories.....	210.2	224.1	220.0	206.1	269.3	..	..	..
<b>Canada<sup>2</sup>.....</b>	<b>93.4</b>	<b>86.7</b>	<b>83.0</b>	<b>82.4</b>	<b>133.9</b>	<b>124.4</b>	<b>118.8</b>	<b>117.6</b>

<sup>1</sup> Since the number of births to women over age 44 is quite small, rates are here restricted to women under 45.

<sup>2</sup> Excludes the Yukon and Northwest Territories.

The rates shown in Table 9 are *crude* in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed *age-specific fertility rates*, i.e., the number of infants born annually to every 1,000 women in *each* of the reproductive age periods, again either for all women or for those who are married. Table 10 provides these two sets of rates for 1951, 1956 and 1961-69.

Table 10 indicates that, in 1969, considering all women, whether married or not, women in their 20s were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25, 146 infants were born during that year or, expressed another way, about one woman out of seven in that age group gave birth to a live-born infant. For the first time in recent years, women in the age group 25-29 had a slightly higher rate (149) than those in their early 20s. However, among married women, teen-age mothers have consistently had the highest fertility, with one out of three bearing a child in 1969, while more than one out of every four married women in their early 20s had a child, as compared with one out of every six in their late 20s.

### 10.—Age-Specific Fertility Rates per 1,000 Women, by Age Group, 1951-69

(Exclusive of Newfoundland)

Year	Age Group

Another measure of fertility in a country is obtainable from what is conventionally referred to as a *gross reproduction rate*. The gross reproduction rates shown in Table 11 indicate the average number of *female* children born each year to each woman living through the child-bearing ages. In other words, the gross reproduction rate represents the average number of females that *would* be born to each woman who lived to age 50 *if* the fertility rate of the given year remained unchanged during the whole of her child-bearing period. A rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930s the rate varied between 1.300 and 1.500 and since World War II has ranged from 1.640 to a record high of 1.915 in 1959. However, since 1959, and particularly since 1964, the national gross reproduction rate has dropped rather dramatically from 1.788 to 1.162 in 1969—only 16.2 p.c. more than the number required for the population to replace itself. Provincial and territorial rates have,

on the whole but with some exceptions, followed the same pattern as the national average. Among the provinces, Quebec, British Columbia and Ontario, in that order, had the lowest gross reproduction rates in 1969, with Quebec barely above the replacement level.

<sup>1</sup> The ages above and below which half of the births occurred.

Over 8 p.c. of the legitimate children born in 1969 were born to mothers under 20 years of age; in over two fifths of the births the mother was under 25 years, and in almost three quarters, under 30 years. In over one fifth of the births the father was under 25 years of age, and in over one half of all births the father was under 30 years. On the other hand, over two fifths of the illegitimate infants were born to mothers under 20 years of age and an additional 37.2 p.c. to mothers under 25 years. The average age of all the married mothers

to whom a child was born in 1969 was 27.0 and of the fathers 30.0 years; ten years ago the average ages of the parents were 28.2 and 31.4, and thirty years ago 28.9 and 33.2, respectively.

The median age of unmarried mothers who bore a live-born child in 1969 was 20.7; that is, half of the mothers of the 33,008 'illegitimate' children delivered in 1969 were under 20.7 years of age.

It should be kept in mind that the higher proportion of births occurring at younger ages in recent years does not necessarily mean that couples are having their children at a younger age. Two things should be noted: first, the decline in fertility in recent years has been greatest among older women and, consequently, births occurring at younger ages automatically form a greater proportion of total births than formerly, as well as produce a lower average age at birth; secondly, this effect is compounded by the growing proportion of women in early child-bearing ages where fertility is higher or, more accurately, has declined less than among older women.

**Order of Birth.**—Table 13 shows the order of birth of all live-born infants in 1969 according to the age of the mother. As would be expected, 33,907, or four out of every five of the 40,930 infants born to mothers under 20 years of age, were the first live-born child, whereas almost 12 out of every 25 of the children born to mothers of 20-24 years were their second or later live-born child. In 1969, 267 infants were born to mothers who had not yet reached their 15th birthday.

Table 14 summarizes the pattern of family formation since 1951 and shows that the percentages of first and second children have been increasing in recent years. As mentioned above for illegitimate births and average ages of parents, the decline in fertility and the recent evolution of the age structure of the female population affect the percentage distribution of births by parity. The increasing proportion of women in early child-bearing ages, where the majority of low-parity births occur, tends obviously to increase the proportion of these births. Also, as explained for illegitimate births, the decline in the number of high-parity births also contributes to the increase in the percentage of low-parity births

since the latter are taken as a percentage of *total* births. These two factors more than offset a decline in recent years in the probability of having a first or a second child as compared with the early 1960s. For example, if the 1962 fertility rates for first and second births had prevailed in 1969; there would have been an extra 55,000 births; the corresponding rates for 1957 would have yielded 86,000 additional births. Thus, the postponement of births by recently married couples is one of the main factors in the decline in the annual number of births in recent years.

**Birthweight.**—Excluding Newfoundland, information on birthweight of newborn infants has recently become available from provincial records of birth. These data, in addition to their usefulness in calculating the average weights of newborn infants, are of importance from the public health and medical points of view in throwing light on the number of immaturely developed foetuses that are delivered alive. According to criteria recommended by the World Health Organization, infants of 5½ lb. or less at birth are considered 'immature' and hence exposed to a much greater risk of dying than those over this weight. Weight of the infant at birth depends on a host of maternal factors—biological, physiological, environmental, nutritional, etc.—information on which is not available from the birth records, but some information is available on the age of the mother and duration of pregnancy before delivery.\* Analysis of this information shows that (1) there are variations in average weight according to the age of the mother, (2) women under 20 and over 35 tend to produce higher proportions of immature infants, so that the late 20s and early 30s would appear to be the ideal ages for motherhood, and (3) almost all infants of less than 28 weeks gestation are delivered 'immature' according to the definition. The average single male infant born at full term weighs about 7 lb. 7 oz. at birth and the average female about 5 oz. less.

**Stillbirths.**†—The 3,694 stillbirths of at least 28 weeks gestation that were delivered in 1969 represented a ratio of 10 for every 1,000 foetuses born alive. As is evident from Table 15, the stillbirth ratio has been decreasing steadily—except for a slight increase in 1967—and has been cut by more than half over the past quarter-century. Although the variations between provincial ratios have never been wide, ratios in some provinces have been reduced more than in others. The stillbirth ratio among unmarried mothers has been consistently higher than that among married mothers but the difference is narrowing.

\* Obtainable from the Vital Statistics Section, Statistics Canada.

† Stillbirth figures given here refer only to foetuses of 28 or more weeks gestation. Up to the end of 1963, only foetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks' pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy are not shown here but are obtainable from the Vital Statistics Section, Statistics Canada.

<sup>1</sup>Exclusive of Newfoundland.

Table 16 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth ratios for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30. The average age of mothers who bore stillborn children in 1969 was 28.4 years; the median age was 27.3. The average age of mothers who bore legitimate live-born children was 27.0 and of those who bore illegitimate live-born offspring was 22.7 (Table 12). Causes of stillbirths in 1969 are shown in Table 17.

## Section 3.—Deaths\*

No official crude† death rates are available prior to 1921, but some indication of these may be obtained from studies of the early censuses as follows:—

Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)
1851-61.....	22	1891-1901.....	16
1861-71.....	21	1901-11.....	13
1871-81.....	19	1911-21.....	13
1881-91.....	18		

As is typical of pioneer populations, Canada had high death rates in the mid-1850s when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25. Although no data are available, it is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly high since even in the 1920s mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was halved during the 80 years between 1851 and 1930, dropping from about 22 to 11. It declined steadily to slightly over 8 in the late 1950s and dropped to a record low of 7.3 in 1969. This is one of the lowest crude death rates in the world.

Table 1, pp. 241-242, shows the trends in crude death rates since 1951 in the provinces and territories. The low rates shown for Newfoundland and Quebec are attributable mainly to the large proportions of young people in their populations and the relatively high rates for British Columbia to the high proportion of elderly people in that province.

\* For international comparisons, see Section 7, pp. 282-283.

† A crude rate is one based on the total population.

### Subsection 1.—General Mortality

**Age and Sex Distribution of Deaths.**—During the period of national vital statistics (1921 to date) the mortality pattern at all ages has been downward. Of major significance in lowering the over-all death rate were the reductions in infant mortality, in childhood death rates and in those of young adults.

Table 18 shows that, between 1951 and 1969, mortality rates among infants (under one year of age) dropped by one half, and death rates for children 1-4 years of age by more than one half. Rates for older children and young adults also declined steeply. Despite the reduction in infant mortality, more deaths still occur in the first year of life than in any other single year of age. As shown in Table 19, males under age 40 accounted for 22.4 p.c. of all male deaths in 1951 but for only 14.1 p.c. of such deaths in 1969; in 1951, 21.4 p.c. of all female deaths were of persons under age 40, a percentage that declined to 11.3 in 1969. Percentage reductions in the mortality of older males since 1951 were more moderate, and over the 55-69 range they were quite small; the corresponding reductions for older females, however, were very substantial in every age group up to 85.

The sharp declines in mortality in the age groups under 40 has tended to increase the population in the older groups and to raise the average age at death. Over the 1951-69 period, the average age at death among males rose from 56.3 to 62.9 and the average age for females increased still more markedly, from 58.7 to 67.3. Over the same period, the male median age at death rose 3.0 years, from 65.5 to 68.5 and the gain for females was 5.4 years, from 68.8 to 74.2. This means that half of the females who died during 1969 were more than 74 years old.

<sup>1</sup> The age above and below which half of the total number of annual deaths occurred.

Table 20 illustrates the variations from province to province in average and median ages at death; these, in turn, are dependent in large measure on the age distribution of the population as well as on varying mortality rates at each age. For example, in Newfoundland a high mortality rate among infants and young children reduces the average and median age for that province, but the reverse is the case in British Columbia and several other provinces with older populations.

**20.—Average and Median Ages at Death, by Sex and Province, 1969**

<b>Canada.....</b>	<b>62.9</b>	<b>67.3</b>	<b>68.5</b>	<b>74.2</b>

<sup>1</sup> The age above and below which half of the total number of annual deaths occurred.

**Deaths in Urban Centres.**—Table 2, pp. 243–246, shows the numbers of deaths in urban centres of 20,000 population or over in 1969 and the average numbers for the period 1961–65; death rates for urban centres cannot be computed for these years since their populations are not known for intercensal years.

**Causes of Death.**—Table 21 summarizes the most recent figures for deaths and death rates in Canada, grouped according to the International Abbreviated List of 50 Causes of the International Classification of Diseases. Close to 77,000, or almost half, of the 154,447 deaths occurring in 1969 were due to diseases of the heart and circulatory system; 29,627 (19 p.c.) to cancer; 11,691 (over 7 p.c.) to accidents; 9,320 to the major respiratory diseases (other than lung cancer); and 6,015 to diseases associated with early infancy. Combined, these accounted for over 85 p.c. of all deaths during the year. Because of the rise in the average age at death during the past 30 years, the proportions of deaths from causes that affect older people have increased. Cancer and diseases of the cardiovascular-renal systems now account for a larger proportion of all deaths than formerly. By the same token, deaths from causes that affect mainly infants, children and young adults have declined.

<sup>1</sup> Less than 0.1 per 100,000 population.

<sup>2</sup> Per 100,000 males.

<sup>3</sup> Per 100,000 live births.

Table 22, pp. 264-265, shows that accidents are, by far, the leading cause of death among males from age one to 44 and one of the five major causes above that age; although less predominant among females, accidents are also one of the leading causes of female death beyond the first year of life. Similarly, cancer is among the major causes of death among both males and females at all ages beyond infancy, while cardiovascular diseases are, on the whole, the major cause of death beyond age 45 among both males and females.

**Subsection 2.—Infant Mortality**

Table 1, pp. 241-242, and Table 23 show the striking improvement that has taken place in the mortality rates among infants (under one year of age) during the past 19 years. Although 52,874 of the 2,364,071 children born in the six years 1964-69 died before reaching their first birthday, over 169,000 others lived who *would have died* at the infant mortality rate prevailing in the period 1926-30. This improvement is attributable to many factors—the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally. Among the provinces, the 1969 male infant mortality rates ranged from a low of 19.8 to a high of 26.3, compared with the national average of 21.7—the latter including the high rate among the Northwest Territories aboriginal population. Female rates ranged from 15.3 to 23.9, compared with the national rate of 16.9. Although the national and provincial rates for both sexes had been declining steadily for some years,

<sup>1</sup> Per 100,000 live births.

and despite, for some unknown reason, some reversals in provincial rates during 1968, the 1969 rates have declined to new record lows in most provinces.

Table 23 shows that mortality among male infants is roughly 20-25 p.c. higher than that among female infants for Canada, with wider variations for the individual provinces. For the country as a whole, out of every 1,000 infant boys born alive in 1969, 22 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 17 died within one year. As already pointed out, there are on the average 1,055 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1964-69 there were 1,213,833 male children born compared with 1,150,240 female children, an excess of 63,593 or 5.5 p.c.; in the same period, 30,240 male children died during their first year compared with 22,634 female children so that the excess of males at one year of age was reduced to 55,987 or 4.9 p.c.

**Infant Mortality in Urban Centres.**—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 243–246, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated, while others have consistently higher rates.

**Causes of Infant Deaths.**—Of the 7,149 infants dying during 1969 before reaching their first birthday, 3,873—or 54 out of every 100—died of conditions usually associated with very early infancy or delivery. Of these, 1,455 died of anoxia or hypoxia (absence or deficiency of oxygen); 1,055 were due to immaturity of the foetus; 510 to some disease or condition in the mother, difficult labour or other complication of pregnancy or delivery; and 409 to some condition in the placenta or umbilical cord. Congenital malformations accounted for an additional 1,469 deaths. Of the 742 deaths from respiratory diseases, 584 were due to pneumonia, and 330 deaths were caused by accidents or other violence. Of the 167 deaths from infective and parasitic diseases, 96 were due to dysentery.

*Neonatal Mortality.*—Deaths occurring within the first four weeks following birth are conventionally referred to as 'neonatal' deaths. Table 25 shows that about 72 p.c. of all infant deaths occurred in this hazardous neonatal period during 1969 and, as would be expected, were caused mainly by conditions associated with pregnancy or delivery. Table 26 gives numbers and rates of neonatal deaths for 1951-69.

The neonatal death rate has dropped from 21.0 in 1951-60 to 13.9 in 1969, with corresponding improvements in all provinces. Variations in provincial rates are narrowing, the 1969 rates ranging from 12.1 to 15.9. However, as the rate approaches a 'hard-core' level, improvements during the past decade have not been as dramatic as they were during the previous two decades.

<sup>1</sup> Includes deaths under 28 days.

*Perinatal Mortality.*—'Perinatal' mortality—the combined total of stillbirths and deaths of live-born infants occurring 'around' the natal period—is a relatively new vital statistics concept. Since such deaths frequently have the same underlying causes associated with pregnancy or delivery, regardless of whether they occur before or after delivery, they are generally considered as including the combined total of stillbirths occurring after at least 28 weeks pregnancy and deaths of live-born infants who fail to survive the first week of life.

In 1969 there were 8,308 such 'deaths', of which 3,694 were stillborn and 4,614 live-born but failed to survive one week. The national rate of such deaths was 22.3 for every 1,000 total deliveries, a drop from 23.7 in 1968. This perinatal rate has declined slowly but steadily from 65.2 in 1921.

### Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 241-242, the number of mothers who die as the result of pregnancy or childbirth has been greatly reduced during the past two decades. An all-time low number of 77 was recorded in 1969 compared with 99 in the previous year and an annual average of 353 as recently as 1951-55. Since 1951, the rate of maternal mortality per 10,000 births has been under 10; since 1959 it has been under five. With this improvement, Canada's maternal death rate (2.1 in 1969) compares more favourably with those of other countries (see p. 283). Mortality among unmarried mothers is higher than among married mothers.

**Causes of Maternal Deaths.**—Table 27 shows that, of the 77 maternal deaths in 1969, 11 resulted from complications arising during pregnancy, another 12 from some type of toxæmia, 22 from a complication of delivery, 19 from a post-delivery complication and 13 from abortive delivery.

27.—Maternal Mortality and Rates per 100,000 Live Births, by Cause, 1969

	<b>All Causes</b> .....	<b>77</b>	<b>21</b>

**Age at Death.**—Table 28 shows the distribution of maternal deaths by age group; the average age at death is about four or five years higher than the average age of all mothers at the time of childbirth. Although death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. The rate for mothers in the age group 30-34 is far higher than the rate for the 20-24 group, and increases with the age of the mother.

### Section 4.—Natural Increase\*

The excess of births over deaths, commonly referred to as 'natural increase', is a very important factor in the growth of a population. Although the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:—

<i>Intercensal Period</i>	<i>Estimated Average Annual Natural Increase Rate (per 1,000 Population)</i>	<i>Intercensal Period</i>	<i>Estimated Average Annual Natural Increase Rate (per 1,000 Population)</i>
1851-61.....	23	1891-1901.....	14
1861-71.....	19	1901-11.....	18
1871-81.....	18	1911-21.....	16
1881-91.....	16		

Because of the combination of high birth rates and declining death rates—despite the fact that death rates were still relatively high—the annual rate of natural increase during the late 1800s and early 1900s varied between 14 and 23; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920s and early 1930s the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there was a steady drop because of declining birth rates, the natural increase rate in 1969 was still relatively high at 10.3, up slightly from 10.2 the previous year.

Table 1, pp. 241-242, gives average rates of natural increase in the provinces for five-year periods 1951-65 and for single years 1966-69. Table 29 gives the provincial figures for males and females separately for 1951, 1961 and 1966-69. High birth rates and declining death rates have given Newfoundland, Alberta, New Brunswick and Saskatchewan the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

\* For international comparisons, see Section 7, pp. 282-283.

Canada.....1951	255,269	18.2	124,354	17.5	130,915	18.9
1961	331,715	18.4	161,694	17.5	173,021	19.2
1966	237,947	11.9	111,015	11.0	126,832	12.7
1967	220,611	10.8	101,547	9.9	119,064	11.7
1968	211,114	10.2	97,955	9.4	113,159	11.0
1969	215,170	10.3	99,562	9.4	115,608	11.0

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

**Natural Increase in Urban Centres.**—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; natural increase for centres of over 20,000 population can be compiled from the birth and death figures given in Table 2, pp. 243-246.

## Section 5.—Marriages and Divorces

### Subsection 1.—Marriages\*

In 1969 a record 182,183 marriages were solemnized in Canada, mainly because of the relative increase of men and women in the prime marrying ages—the late teens and the early 20s. This growing proportion of young men and women has advanced the crude marriage rate from a low of 6.9 per 1,000 population in 1963 to 8.7 in 1969. Table 30 gives the number of marriages and the marriage rates for Canada and the provinces for 1951, 1961 and 1966-69, together with percentages of brides and bridegrooms according to place of birth. For the country as a whole, 81 p.c. of the bridegrooms of 1969 were born in Canada and 67 p.c. in the province in which they were married; 85 p.c. of the brides were born in Canada and 73 p.c. in the province in which they were married. There are wide variations in the pattern of intermarriage of foreign-born and native-born persons as between provinces; in the older Atlantic Provinces and in Quebec and Saskatchewan, there is a greater tendency than in the other provinces to marry native Canadians and in these areas both partners are often born in the same province. In Ontario, Alberta and British Columbia there are higher proportions than elsewhere of intermarriage with persons born in other provinces or outside Canada.

\*For international comparisons, see Section 7, pp. 282-283.

**30.—Marriages and Rates per 1,000 Population, by Province, with Percentage Distribution of Bridegrooms and Brides by Nativity, 1951, 1961 and 1966-69**

**Age and Marital Status of Brides and Bridegrooms.**—Table 31 shows that 89.3 p.c. of the brides and 89.4 p.c. of the grooms in 1969 had never previously married. The proportion of divorced brides remarrying in 1969 rose sharply for the first time to 6.4 p.c. from 4.4 p.c. in the previous year and the proportion of divorced grooms from 4.7 p.c. to 6.9 p.c. This was presumably the result of the increased number of divorces granted under the new federal divorce legislation enacted in 1968 (see p. 277).

In 1969, the median age at marriage—the age above and below which half of the marriages occurred—was 23.5 for bachelors and 21.4 for spinsters. After having remained constant since 1960 at 21.1 and 21.2, the 1969 median age for brides represents a slight trend toward later marriage.

**Religious Denominations of Brides and Bridegrooms.**—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 32 shows the relatively strong influence that religion has on marriage. About 64 p.c. of all marriages are between persons of the same religious denomination; in 1969 among those of Jewish faith it was close to 90 p.c.; among Roman Catholics about 80 p.c.; United Church about 50 p.c.; and Eastern Orthodox about 64 p.c. Except for those of the Jewish faith, the proportions of persons of the same faith marrying appears to be declining slightly in recent years.

### Subsection 2.—Divorces

Before World War I the number of divorces granted in Canada represented less than one per 1,000 of the yearly number of marriages. After that War, however, there was a definite upward trend; the number advanced to 8,213 in 1947 and then declined gradually to a postwar low of 5,270 in 1951. Since that year, the number of final divorce decrees granted rose steadily each year to a record 11,343 in 1968. A new federal divorce law, enacted effective July 2, 1968, extended the alleged grounds for divorce petitions from one (adultery was the only grounds under the old legislation in most provinces) to some 16, summarized as: (1) *Marital Offence*—adultery, sodomy, bestiality, rape, homosexual act, subsequent marriage, physical cruelty, and mental cruelty; and (2) *Marriage Breakdown by Reason of*—imprisonment for an aggregate period of not less than three years, imprisonment for not less than two years on sentence of death or sentence of 10 years or more, addiction to alcohol, addiction to narcotics, whereabouts of spouse unknown, non-consummation, separation for not less than three years, and desertion by petitioner for not less than five years.

Since the divorce 'decree nisi' is usually not made absolute by the divorce court until three months later, the impact of the new law had little effect on the 1968 count of divorces as very few petitions filed under the new legislation would have been heard and the final decree (decree absolute) granted between July 2 and the end of the calendar year.

Although the 1969 total includes a sizable number of decrees relating to petitions filed under the old legislation—for which the decree absolute was granted some time during 1969—the impact of the new legislation is evident; Table 33 shows that 26,079 final decrees were granted during the calendar year. In most provinces, 1969 divorces were two to three times the number granted in any previous year but the largest relative increases were in Newfoundland where the number rose from 15 to 103 and in Quebec where the increase was from 606 to 2,930. Before the enactment of the 1968 legislation, divorces on behalf of residents of Newfoundland and Quebec were granted by the Parliament of Canada.

In 1969, Ontario accounted for 11,843 divorces or more than half of the total, British Columbia accounted for 4,224 or 16 p.c., Alberta for 3,437 or 13 p.c., and Quebec for 2,930 or 11 p.c.

The 1969 divorces represented a rate of 123.8 per 100,000 population, more than twice the 1968 rate of 54.7. Alberta and British Columbia have consistently had the highest rates among the provinces. In 1969 their rates were 220 and 204, respectively, followed by Ontario with 159, Manitoba with 136 and Nova Scotia with 104 per 100,000 population.

## Section 6.—Canadian Life Tables

Life tables are measures of life expectancy compiled from the death rates prevailing over a period. They assume that a given cohort of people (usually 100,000) are born simultaneously in a particular year and continue to be subject all their lives to the death rates prevailing in that year, or perhaps to the average death rates for, say, a three-year period centred around that year. The "expected" deaths in the cohort are calculated (in the case of a "complete" life table) for the first year of life, second year of life, etc., and the diminishing cohort is "followed" for 100 or more years until it has been virtually eliminated. Life expectancy at birth is calculated for the entire cohort and, subsequently, remaining life expectancy is calculated for the survivors at one year, two years, etc. It should be realized that the assumptions of such a life table are never fulfilled in practice and that the hypothetical cohorts in life tables do not represent any actual population. Usually, the persons in an actual cohort born in the life-table year will have a higher life expectancy than those in the life-table cohort because, during their lifetimes, public health conditions will presumably constantly improve and standards of medical care will also presumably advance.

The function of the life table is to express in compact form the mortality trends of the period for which it is compiled. In particular, when a series of life tables for a given country can be compared, they show a great deal about the historical changes in the mortality conditions prevailing in that country. Six official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951, 1956, 1961 and 1966.

The life-table values for 1966 are given for selected years in Table 34. This table shows that, at 1965-67 mortality rates, 2,525 of 100,000 males born would have died in their first year with 97,475 surviving to one year of age, that 156 more would have died in their second year with 97,319 reaching their second birthday, and so on. There would be 252 survivors at 100 years of age. The "Probability of Dying" column shows the ratio between the population at each age and the number of "expected" deaths in the coming year. Finally, as already stated, the "Expectation of Life" column shows the number of remaining years of life that can be expected at each age, given the 1965-67 mortality rates.

Table 34 also shows that the male probabilities of dying were higher than the corresponding female probabilities over the entire period from birth to 90 years. Mortality rates, and consequently the probabilities of dying, were lowest at about age 10 for both sexes. Above this age the male probability rose quite rapidly, reflecting male accident mortality, and the female probability rose more gradually. Mortality for men between ages 20 and 35 was fairly constant but the male probability began to rise steeply at age 40, due mainly to cardiovascular mortality. Female probabilities after this age rose steadily but less rapidly. It may be observed that about 11,700 males would have died by age 50 as compared with 7,100 females, and that about 57,500 males would have survived to age 70 as compared with 74,400 females.

In the 1966 table, Canadian life expectancy at birth had reached a new high point of almost 68.8 years for males and 75.2 years for females—comparable to the expectancies for other countries with highly developed programs of medical and public health care. Because of the still substantial level of infant mortality, the expectations for male and female children one year old were somewhat higher than the corresponding expectancies at birth. Expectation at age 20 was 51.5 years for men and 57.4 years for women and, at age 40, 33.0 years for men and 38.2 for women. By age 65, the remaining expectancies were 13.6 years for men and 16.7 years for women.

Table 35 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951, 1956, 1961 and 1966. According to these figures, male life expectancy at birth rose steadily from 60.0 years in 1931 to 67.6 years in 1956 and then

more slowly to 68.8 years in 1966 for a total advance of 8.8 years. Female expectancy at birth rose more quickly than male, and substantially even from 1956 to 1966. The total increase was 13.1 years, from 62.1 years in 1931 to 75.2 years in 1966. The gap between male and female expectancy at birth rose from 2.1 years in 1931 to 6.4 years in 1966.

An examination of the expectancies at one year of age shows that lower levels of infant mortality greatly increased expectancy at birth. Male expectancy at one year of age rose by 4.8 years over the 35-year period and showed virtually no change between 1961 and 1966. Female expectancy at one year, however, rose by exactly 10 years, from 65.7 in 1931 to 75.7 in 1966, and showed a moderate increase since 1961. It may be noted that, in 1931, expectancy at birth was considerably lower than expectancy at one year of age, and that in 1966 the difference was much smaller. Male expectancy at age 20 rose by only

2.5 years over the 1931-66 period and not at all between 1961 and 1966. The corresponding gain for females was 7.6 years. Female expectancy at age 20 in 1966 was nearly six years above male expectancy. Male expectancy at age 40 inched up by about a year over the period to reach 33.0 years in 1966, while the corresponding female expectancy rose over five years from 33.0 years in 1931 to 38.2 years. At age 65, male expectancy rose 0.6 years from 13.0 in 1931 to 13.6 in 1966, while female expectancy advanced three years from 13.7 to 16.7 in the same comparison. The 1966 gap between male and female expectancy was therefore 5.2 years at age 40 and 3.0 years at age 65.

The improvement in life expectancy for children and young adults was largely due to greatly reduced mortality from infectious diseases. Gains in life expectancy for adult males have been held down by, among other factors, (1) continued high cardiovascular mortality, (2) continued high accident mortality, and (3) the rise in lung cancer mortality. Further improvements in life expectancy seem primarily to depend upon (1) additional reductions in infant mortality, (2) lower accident mortality rates, especially among young men, and (3) advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions, cancer and respiratory conditions. Up to now, these diseases have proved very difficult to control and it is therefore doubtful whether future improvement in life expectancy will be comparable with the advance shown in the past 35 years.

Table 36 shows the life expectancies for five Canadian regions for selected years over the period 1931-61, and the corresponding expectancies for all ten provinces for 1966. The steady widening of the gap between male and female expectancies, so evident at the national level, was common to the expectancies for all five regions. Throughout the 1931-61 period, the Prairie Provinces showed the highest male expectancies and, in the later years, the highest female expectancies as well. The Quebec expectancies were consistently the lowest but they showed the largest gains over the period. Between 1931 and 1961, Quebec life expectancies at birth rose by 11.1 years for males and 15.0 years for females, as compared with the national advances of 8.4 years for males and 12.1 years for females.

In 1966, for the first time, expectancies were calculated for all ten provinces. Male expectancies at birth ranged from 70.5 for Saskatchewan to 67.9 for Quebec, a difference of 2.6 years; Saskatchewan also had the highest expectancies for females at 76.5 years and Quebec the lowest at 73.9 years. In general terms, it may be stated that 1966 expectancies for all four western provinces, at all the selected ages, were moderately above the national average, with the Saskatchewan rates being the highest in all cases. Ontario rates were fairly close to the Canadian average, except those for older men which were slightly below it. Quebec rates were still the lowest in the country, rather less than a year below the national average for males from birth to age 40 and somewhat more than a year below the national average for the corresponding range for females. For the Atlantic Provinces, expectancies at birth and at one year of age clustered fairly closely around the Canadian average, although the Newfoundland female expectancy at birth was a little lower. This statement also applies to expectancies at age 20, with Newfoundland males slightly above the national level. For older males, most Atlantic region expectancies were a little above the national figure and for older females they fluctuated about the average.

## Section 7.—International Comparisons of Vital Statistics

Table 37 gives a summary of Canada's national and provincial vital statistics rates compared with the most recently available data for several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by two countries—Venezuela and Japan—and that some of the provinces have lower rates than most other countries. The Canadian birth rate ranks highest among those listed. However, nine countries reported lower rates of infant mortality, notably Sweden, the Netherlands, Norway and Finland—13.0, 13.2, 13.7 and 13.9, respectively, as compared with Canada's rate of 19.3.

## 37.—Principal Vital Statistics Rates of Selected Countries, 1969

Note.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths. SOURCES: United Nations and World Health Organization publications and reports of certain countries concerned.

*The interpretation of the symbols used in the tables throughout the Year Book  
will be found on p. vii of this volume.*

A number of important changes in the area of health and welfare were instituted during the year ended June 1971. Among them was the tabling in the House of Commons of the White Paper, Income Security for Canadians, on Nov. 30, 1970, by the Minister of National Health and Welfare. This document included proposals to replace Family Allowances with a Family Income Security Plan, to amend the Old Age Security and Guaranteed Income Supplement programs, to amend the Canada Assistance Plan, and to hold discussions with

\* Except where otherwise indicated, this Chapter was prepared (September 1971) by the Research and Statistics Directorate of the Department of National Health and Welfare, Ottawa.

the provinces to improve provincial social assistance programs financed through the Canada Assistance Plan. The primary objective of these changes was to shift income security payments in favour of people in greatest need.

The proposals relating to Old Age Security and the Guaranteed Income Supplement were enacted in December 1970. The Old Age Security Pension was raised to \$80 a month, effective Jan. 1, 1971; the Guaranteed Income Supplement was raised from Apr. 1, 1971 to a maximum of \$55 for a single pensioner and to \$95 where both spouses are pensioners. In June 1971, the Minister announced modifications to the proposed Family Income Security Plan and indicated that further changes might be expected before legislation was introduced.

During the year, the Minister of National Health and Welfare stated at a meeting of federal and provincial Ministers of Health that exploratory discussions would be undertaken with provincial governments with a view to revising the existing cost-sharing arrangements in the field of health care. The objectives of any new approach would be to reduce the rate of escalation of costs of hospital and medical services, and to give the provinces greater flexibility in determining their priorities in health programs.

During 1970, Quebec and Prince Edward Island joined the federal-provincial Medical Care Insurance Program. New Brunswick followed on Jan. 1, 1971, and the Northwest Territories on Apr. 1, 1971.

Efforts were under way to implement recommendations of the 1969 task force reports on the Cost of Health Services in Canada. In April 1971, a National Conference on Assistance to the Physician discussed ways and means of assisting physicians to supply health care more effectively and efficiently.

The Department began a National Survey of Nutrition in September 1970, aimed at providing information on incidence of nutritional diseases and disorders, and on levels of ingestion of nutrients, food additives, non-nutritive substances, and pesticide residues. Initial surveys were made in every province.

A Family Planning Program was announced in September 1970, to be implemented in co-operation with the provinces, professional agencies, and other interested bodies. The Minister expressed the hope that voluntary use of family planning services would reduce infant mortality, child neglect, abandonment, desertion, welfare dependency, and child abuse.

In January 1971, a comprehensive national program against drug abuse was announced in Parliament by the Minister. It will involve research on the non-medical use of drugs, expansion of services for analysing drugs, a national information program, and new methods of handling drug-created problems. Another announcement by the Minister in May 1971 concerned extension of the Department's Drug Quality Assurance Program, designed to support other measures aimed at reducing the cost of drugs to the public. The new monitoring procedures will cover analysis and inspection of manufacturing facilities, assessment of efficacy, and publication of results.

A Bill to ban all advertising and promotion of cigarette products was introduced in Parliament on June 10, 1971. The proposed Cigarette Products Act covers the major recommendations of the 1969 report of the Standing Committee on Health, Welfare and Social Affairs. It would prohibit Canadian manufacturers from promoting the sale of cigarettes on television, radio and in print, or by means of premiums or coupons.

## PART I.—HEALTH

Provincial governments in Canada have constitutional authority to carry out most health services and many preventive and regulatory health activities are delegated by them to the local health services. On its part, the Federal Government exercises jurisdiction over special health areas and functions of a national or international character. In addition, there are numerous non-governmental health agencies, organized at national, provincial and local levels, that are active in different health fields.

## Section 1.—Federal Health Activities

The chief federal health agency is the Department of National Health and Welfare, although important treatment services are administered by the Departments of Veterans Affairs and National Defence. Other federal agencies have been designated to carry out specialized health functions; for example, Statistics Canada is responsible for the gathering of vital and other health statistics, the Medical Research Council administers a medical research grant program, and the Canada Department of Agriculture has certain responsibilities for health connected with food production.

The Department of National Health and Welfare carries out a range of preventive treatment and regulatory health services, supports provincial health programs and participates in international health measures. Its Medical Services Branch provides comprehensive public health services to Indians and to all residents of the Yukon and Northwest Territories. This Branch also operates quarantine, sick mariners and the civil aviation medicine programs and an occupational health service for federal employees. To prevent hazards to health, the Department's Food and Drug Directorate establishes and maintains national standards for the manufacture and distribution of foods, drugs, cosmetics and medical devices and carries out related research.

Another unit, the Canadian Communicable Disease Centre, serves as the national public health laboratory. Special programs have also been established for radiation protection and emergency health services in which the provinces participate.

In its supportive role, the federal health department assists the provincial public health services, hospital and medical care programs and provides grants for the extension of health training facilities through a number of cost-sharing and health grant programs. It supplies scientific information and technical advice on health questions and engages in intramural research in such areas as health manpower and the costs and delivery of health services. Grants for public health research and innovative services including programs concerning the non-medical use of drugs are made available to provincial health departments, universities and voluntary groups.

### Subsection 1.—Public Medical Care

The expression "medicare" is commonly used in referring to the federal Medical Care Insurance Program. This Program, established under the Medical Care Act, has permitted the Federal Government, since July 1, 1968, to contribute about one half of the national cost of insured services to those provinces operating medical care insurance plans that meet certain minimum criteria. Two provinces—British Columbia and Saskatchewan—became participants in the federal plan at its inception. Other provinces joined as follows: Manitoba, Nova Scotia and Newfoundland on Apr. 1, 1969; Alberta on July 1, 1969; Ontario on Oct. 1, 1969; Quebec on Nov. 1, 1970; Prince Edward Island on Dec. 1, 1970; New Brunswick on Jan. 1, 1971; and the Northwest Territories on Apr. 1, 1971. Specifically, the Federal Government contributes to any one participating province half of the per capita cost of all insured services furnished under the plans of all participating provinces, multiplied by the number of insured persons in that one province. The minimum criteria that must be met are as follows.

- (1) *Comprehensive coverage* must be provided for all medically required services rendered by a physician or surgeon. There can be no dollar limit or exclusion except on the ground that the service was not medically required. The federal program includes not only those services that have been traditionally covered as benefits to a greater or lesser extent by the health insurance industry, but also preventive and curative services that have been traditionally covered through the public sector in each province; for example, the medical care of patients in mental and tuberculosis hospitals and those services of a preventive nature provided to individuals by physicians in public health agencies.
- (2) The plan must be *universally available* to all eligible residents on equal terms and conditions and cover at least 95 p.c. of the total eligible provincial population. This "uniform terms and conditions" clause is intended to ensure that all residents have access to coverage and to prevent discrimination in premiums on account of previous health, age, non-membership in a group, or other considerations. If a premium system of financing is selected, sub-

sidization in whole or in part for low-income groups is permitted. It has been left to the individual province to determine whether its residents should be insured on a voluntary or compulsory basis. Utilization charges at the time of service are not precluded by the federal legislation if they do not impede, either by their amount or by the manner of their application, reasonable access to necessary medical care, particularly for low-income groups.

- (3) The plan must provide *portability* of benefit coverage when the insured resident who has paid his premiums, if any, is temporarily absent from the province and when moving residence to another participating province.
- (4) The provincial medical care insurance plan must be administered on a *non-profit basis by a public authority* that is accountable to the provincial government for its financial transactions. It is permissible for provinces to assign certain administrative functions to private agencies.

The above criteria leave each province with substantial flexibility in determining the administrative arrangements for the operation of its medical care insurance plan and in choosing the way in which its plan will be financed, e.g., through premiums, sales tax, other provincial revenues, or by a combination of methods.

Provincial programs that provide health-care services (apart from those already insured under the Medical Care Act) for welfare recipients establishing eligibility on the basis of financial need are supported financially by the federal program known as the Canada Assistance Plan. This program (p. 347) provides for federal payment of one half of the cost of personal health-care services, as well as welfare services. The provinces are free to make available a wide range of health care benefits.

### Subsection 2.—Health Resources Program

The Health Resources Program is concerned with the manpower that is necessary to ensure adequate health-care services in Canada. Under the program, the Government of Canada makes capital grants for teaching and research establishments, consults with officials of provincial governments and other agencies, provides expert advice, undertakes studies on manpower, and supports programs that are designed to increase the effectiveness of health-care personnel.

*The Northern Health Service in the Eastern Arctic operates through Frobisher Bay General Hospital but basic to the service are the nursing stations in the widely scattered settlements which are staffed by two or three nurses who rely heavily on the skills of Eskimo assistants.*

In 1966, Parliament passed the Health Resources Fund Act in anticipation of an increase in the demand for health manpower after the introduction of compulsory medical care insurance. It provided \$500,000,000 to be disbursed over the period from 1966 to 1980 for capital expenditures on medical schools, teaching hospitals, training facilities for nurses and other health-care personnel, and for research establishments other than residential buildings. The Government of Canada pays up to 50 p.c. of the cost of planning, construction, purchase, renovation and basic equipment, but excluding the costs of land and interest. Of the total, \$400,000,000 is available to the provinces in proportion to their population, and \$25,000,000 for projects that are jointly undertaken by the four Atlantic Provinces; the remaining \$75,000,000 had not yet been allocated by September 1971. By Mar. 31, 1971, the Government had approved disbursement of \$216,000,000 of which it had paid out \$143,000,000, about two thirds for training facilities and one third for research establishments.

### Subsection 3.—National Health Grant Program

The National Health Grant Program was instituted in 1948 to assist the provinces in extending and improving public health and hospital services. As provincial needs altered, changes were made in the amounts and conditions of individual grants. Table 1 shows the utilization of the General Health Grants and Hospital Construction Grants, changes in their classification since inception, and the 1970-71 grants as follows: Professional Training, Mental Health, Tuberculosis Control, Public Health Research, General Public Health, Cancer Control, Medical Rehabilitation and Crippled Children, and Child and Maternal Health. During the period 1948-71, expenditures under this program amounted to \$922,000,000.

Since the inception of the program, the largest single grant was made in support of hospital construction. This grant was terminated on Mar. 31, 1970, and lump-sum cash payments were made to the provinces and territories in discharge of the full entitlement of each province and territory to the termination date of the grant. During the life of this grant, funds were approved to assist with the construction of space to house more than 130,200 beds and 16,000 bassinets, for more than 24,300 beds for nurses, 971 beds for interns and about 8,315,000 sq. feet of floor area for certain services used by both in-patients and out-patients. The second largest grant, the General Public Health Grant, has assisted the provinces in extending local health services for the prevention of disease and disability, in controlling environmental health hazards, and in developing a great variety of health services. Since 1948 more than 53,700 health personnel have received assistance in taking training in the health disciplines. Other grants are designated for preventive and treatment services in specific areas, such as mental health, tuberculosis and cancer control, maternal and child care, and medical rehabilitation. Projects supported by the Public Health Research Grant relate to the prevention of disease, disability or death; epidemiology; community health and medical care; operational research; environmental health, including sanitation; and the utilization of health manpower.

The Government has indicated its intention of terminating the General Health Grants, except for the Professional Training and Public Health Research Grants, by the end of March 1972. The amounts available to the provinces are being gradually reduced; the first reduction took place in 1969-70 and the second in 1970-71. The final reduction will be made in the 1971-72 fiscal year.

In April 1969, a new National Health Grant was established to stimulate research studies, service demonstrations and training activities of national importance for the improvement of health services. Eligible applicants may be official or voluntary health agencies, universities, or other qualified agencies or individuals. In 1969-70, the amount allocated was \$1,062,000 on the basis of five cents per capita of population; in 1970-71, it was increased to \$2,300,000 on the basis of 10 cents per capita. For 1971-72, the amount available is \$3,264,000 based on 15 cents per capita. Unlike its predecessor, which was a joint federal-provincial program, the National Health Grant provides direct financial support to eligible applicants.

<b>Totals.....</b>	<b>1,059,488,347</b>	<b>900,385,799</b>	<b>85</b>	<b>22,888,849</b>	<b>21,512,757</b>

<sup>1</sup> As set out in the Orders in Council authorizing the General Health Grants and Hospital Construction Grants for the years cited. Provinces may vary the amounts allocated for individual General Health Grants by transfer of unexpended funds from one grant to another. <sup>2</sup> Total expenditures for each grant for all provinces including Quebec's share, which has been paid through tax rebate under the Established Programs (Interim Arrangements) Act, effective 1965-66.

<sup>3</sup> Because of grant transfer of funds between grants, expenditures can exceed amounts allocated. <sup>4</sup> Merged with the Medical Rehabilitation Grant, Apr. 1, 1960. <sup>5</sup> The amounts allocated exclude, whereas the amounts expended for 1969-70 include, re-votes for unclaimed allocations as from Apr. 1, 1953.

<sup>6</sup> Absorbed into the General Public Health Grant, Apr. 1, 1960. <sup>7</sup> Lapsed in 1953 following the completion of provincial health surveys. <sup>8</sup> Introduced in 1953 and absorbed into the General Public Health Grant, Apr. 1, 1960.

<sup>9</sup> Introduced in 1953 and merged with the Crippled Children Grant, Apr. 1, 1960. <sup>10</sup> From 1960 only; see footnotes <sup>4</sup> and <sup>9</sup>. <sup>11</sup> Introduced in 1953.

#### Subsection 4.—Hospital Insurance

Provincial hospital insurance programs, operating in all provinces and territories since 1961, cover 99 p.c. of the population of Canada. Under the Hospital Insurance and Diagnostic Services Act of 1957, the Federal Government shares with the provinces the cost of providing specified hospital services to patients insured by these programs. Specifically excluded are tuberculosis hospitals and sanatoria, hospitals or institutions for the mentally ill, and institutions providing custodial care, such as nursing homes and homes for the aged. The methods of administering and financing the program in each province and the provision of services above the stipulated minimum required by the Act are left to the choice of the province.

Insured in-patient services must include accommodation, meals, necessary nursing service, diagnostic procedures, pharmaceuticals, the use of operating rooms, case rooms, anaesthetic facilities, and the use of radiotherapy and physiotherapy if available. Similar out-patient services may be included in provincial plans and authorized for contribution under the Act. All provinces include some out-patient services, and most cover a fairly comprehensive range. Provincial plans are administered by provincial departments of health in some provinces and by separate commissions in others. To finance the plans, the provinces use general revenue, sales taxes, patient charges, and premiums in various combinations.\* The Government of Canada contributes, out of the consolidated revenue fund in respect to each province, the sum of 25 p.c. of the per capita cost of in-patient services in Canada and 25 p.c. of the per capita cost of in-patient services in the province,

\*All provinces use general revenue: Nova Scotia levies a health services tax; Ontario, Manitoba and Saskatchewan impose premiums (legislation changes in Saskatchewan and Ontario abolished premium payments for family heads aged 65 or over effective Jan. 1, 1972, and in Saskatchewan abolished all authorized charges effective Aug. 1, 1971); and Saskatchewan, Alberta, British Columbia and the Northwest Territories impose authorized charges at the time of service.

multiplied by the average number of insured persons in that province. Thus, the total contribution is about 50 p.c. of the sharable cost for all Canada, but the proportion is higher for provinces where the per capita cost is below average and lower for the other provinces. Contributions for insured out-patient services with respect to each province are paid in the same proportion as the contributions to the cost for in-patients.

For 1970, the Federal Government made the following advance payments, totalling \$692,432,405: Newfoundland \$22,167,611, Prince Edward Island \$4,411,557, Nova Scotia \$35,278,498, New Brunswick \$25,672,076, Ontario \$349,671,410, Manitoba \$43,807,162, Saskatchewan \$41,281,057, Alberta \$78,553,302, British Columbia \$89,515,860, Yukon Territory \$661,046, and the Northwest Territories \$1,412,828.\*

Tables 2 and 3 give 1969 data for the reporting hospitals listed in hospital insurance agreements. The 1,255 hospitals listed had a total of 145,544 beds set up at the end of the year, or 6.9 beds per 1,000 population. The rate of patient-days per 1,000 population was 2,024 for Canada and ranged from 1,575 in Newfoundland to 2,507 in Alberta.

## 2.—Number of Beds Set up in Reporting Hospitals Listed in Hospital Insurance Agreements, with Rates per 1,000 Population, by Province, as at Dec. 31, 1969

<b>Canada.....</b>	<b>1,244</b>	<b>42,628,336</b>	<b>2,024</b>	<b>39,625,465</b>	<b>1,892</b>

<sup>1</sup> Per 1,000 population; based on population estimates as at June 1, 1969.

<sup>2</sup> Per 1,000 persons insured under provincial plans.

Table 4 shows the expenditures of reporting budget review hospitals. They exclude capital costs but include expenditures for services not covered by hospital insurance plans.

\*On Jan. 1, 1965, contributions to Quebec under the Hospital Insurance and Diagnostic Services Act were discontinued and replaced by arrangements under the Established Programs (Interim Arrangements) Act.

The expenditures increased in 1969 by almost 14 p.c. over the preceding year to \$1,961,024,000, of which salaries accounted for over two thirds.

Provincial per capita expenditures shown in the table are influenced by the percentage of services provided by budget review hospitals (over 90 p.c. nationally but varying provincially) as well as by differences in hospital utilization, particularly in the amount of care provided for chronic patients.

#### 4.—Revenue Fund Expenditures of Budget Review Hospitals, by Type of Account and by Province, 1969

<sup>1</sup> Includes payments to medical staff, interns, residents and students, previously classified as "other expense".

<sup>2</sup> Includes purchased food service.

<sup>3</sup> Includes other supplies, electricity, maintenance services, repairs, interest, depreciation, rent, etc.

<sup>4</sup> Excludes newborn.

<sup>5</sup> Based on population estimates as at June 1, 1969.

#### Subsection 5.—Food and Drug Control

The provisions of the Food and Drugs Act, administered by the Food and Drug Directorate of the Department of National Health and Welfare, apply to the manufacture, advertising, packaging and distribution of drugs, cosmetics and medical devices, and to the manufacture, packaging and distribution of foods, anywhere in Canada. Powers are given under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. The Act specifically prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases. This feature of the Act is thought to be unique to Canada and it has proven valuable in the prevention of fraud.

Standards of safety and purity are developed through laboratory research and maintained by means of a regular and widespread inspection. The inspection of food-manufacturing establishments plays a major role in the production of clean, wholesome foods containing ingredients that meet recognized standards. The Food and Drug Regulations list chemical additives that may be used in foods, the amounts that may be added to each food, and the underlying reason. Information on new additives must be submitted for careful review before they are included in the permitted list. Considerable emphasis is placed upon studies to ensure that the levels of pesticide residues in foods do not constitute a health hazard. The effect of new packaging and processing techniques on the bacteria associated with food spoilage is also of special concern.

The Food and Drug Directorate regulates both the manufacture and distribution of drugs in Canada. The conditions under which drugs are to be manufactured are described in the Manufacturing Facilities and Control Regulations. They relate to facilities, employment of qualified personnel, quality control procedures, maintenance of records, and a suitable system to enable a complete and rapid recall of any batch of drugs from the market. Pharmaceutical plants are regularly visited by inspectors to ensure that the drugs produced are of a suitable quality to be sold in Canada. Control over the distribution of drugs is based on the relative safety of a drug and its potential for abuse. Accordingly, there are different levels of control. Since 1966, every manufacturer and distributor of drugs in Canada has been required to submit to the Directorate information on all the

products he is marketing in Canada. From this and other information, decisions are made regarding the types of control procedure that will be implemented.

A limited number of drugs in specified dosage ranges may be sold through any outlet under the Patent and Proprietary Medicines Act. Registration under this Act allows a manufacturer to sell secret formula preparations and make limited claims for the product. Narcotics and controlled drugs are closely regulated and detailed records kept of all transactions involved in the legitimate use of these products. The illicit market in narcotics and similar products is the responsibility of the Royal Canadian Mounted Police and other law-enforcement agencies. Close co-operation is maintained between these agencies and the Food and Drug Directorate.

When new drugs with unknown properties are to be placed on the market, detailed information is demanded of the manufacturer. This information includes data on adverse side effects, the manufacturing process to be used, the results of the drug in clinical tests, and the formulation of the dosage forms. The data are carefully reviewed by the Directorate to ensure that the drug is safe and that it is effective for the purpose claimed. Even after the drug is marketed, the Directorate maintains a close watch over the side effects encountered in practice. If it proves to be relatively safe and effective it is no longer classed as a new drug, but if it appears that it might be unsafe the manufacturer would be asked to remove it from the market. The Directorate conducts an adverse-drug-reaction reporting program across Canada to recognize and investigate reactions to drugs. The co-operation of the medical, dental, veterinary and pharmaceutical professions is also solicited in advising the Directorate of such reactions in private practice.

### Subsection 6.—Medical Services

Through its Medical Services Branch, the Department of National Health and Welfare provides or arranges for several types of medical service for persons whose care by custom or legislation is a federal responsibility.

**Indian Health Services.**—Indians, as residents of a province, are entitled to the benefits of medical care and hospital insurance. These insured benefits are supplemented by the Medical Services Branch, which assists Indian bands in arranging for transportation, and in obtaining drugs and prostheses. A comprehensive public health program provides dental care for children, immunization, school health services, health education, prenatal and postnatal clinics, and well-baby clinics. Direct financial assistance is also given to organizations in support of Indian programs directed toward improving the quality of life by means of adult education, family planning, prevention of venereal disease, and the suppression of alcoholism and drug abuse. Since Indians comprise only 1 p.c. of the Canadian population and are distributed widely across the country, specially designed health facilities have been constructed in almost 200 communities where such facilities are otherwise lacking; about 60 are nursing stations, 91 are health centres and 46 are out-patient clinics.

Indians now generally use the same hospital facilities as non-Indians and most of the few Indian hospitals left are either in the process of being phased out or converted to community hospitals admitting any patients who need care. There are now only 10 Indian hospitals in the provinces. An increasing number of native people are being trained and employed in public health and medical care services, with a view to advancing understanding of and increasing health activities in local communities.

**Northern Health Services.**—The Yukon and Northwest Territories now have tax-supported hospital insurance programs and the latter also has a medical care insurance program which the Yukon will have in the near future; most employed persons in the Yukon are now insured under private plans to which both employer and employee contribute. Thus, the northern health services of the Department of National Health and Welfare are mainly related to public health programs. In addition, special arrangements are made

to facilitate inter-station communication and the transportation of patients from isolated communities to medical centres. Several university groups have interests in delineated zones for the provision of medical personnel and students in rotation and these interests are supported by government contracts and medical care insurance. Departmental facilities include four hospitals, six clinics, 34 nursing stations and 17 health stations.

**Quarantine and Regulatory Service.**—Under the Quarantine Act, all vessels, aircraft and other conveyances and their crews and passengers arriving in Canada from foreign countries are inspected by Quarantine Officers of the Medical Services Branch to detect and correct conditions that could lead to the entry into Canada of such diseases as smallpox, cholera, plague, yellow fever, typhus and relapsing fever. Fully organized quarantine stations are located at all major seaports and airports. The Branch is also responsible for enforcing hygienic standards on federal property including ports and terminals, on interprovincial means of transport, and on Canadian ships and aircraft.

**Immigration Medical Services.**—Under the Department of National Health and Welfare Act and the Immigration Act, the Medical Services Branch determines in Canada and other countries the health status of all applicants for immigration to Canada and some non-immigrants and provides treatment for certain classes of persons after arrival in Canada, including immigrants who become ill en route to their destination or while seeking employment.

**Public Service Health.**—The Medical Services Branch is responsible for a comprehensive occupational health program for federal employees throughout the country and abroad. This service includes health counselling, surveillance of the occupational and working environment, pre-employment, periodic and special examinations, first aid and emergency treatment, and a wide range of advisory services and special health programs.

**Civil Aviation Medicine.**—The Department provides an advisory service to the Ministry of Transport concerning the health and safety of all persons involved in Canadian civil aviation. Regional and headquarters aviation medical officers review all medical examinations, participate in aviation safety programs and assist in air accident investigations. Close liaison is maintained with foreign aviation medical authorities, as standards are usually based upon international agreements. The remarkable expansion of Canadian aviation activity during the past decade has almost doubled the medical assessment work and resulted in a greatly increased demand for aeromedical and flight safety training. Closer interdepartmental co-operation and increased utilization of all Canadian aviation medicine resources has been mandatory and presents a continuing challenge.

### Subsection 7.—Health Science Research

Federal Government expenditures for health science research in the year ended Mar. 31, 1971 were estimated at \$55,600,000, compared with \$58,500,000 in 1969-70 and \$44,700,000 in 1967-68. The 1970-71 outlay was almost all accounted for by the Medical Research Council which spent \$34,000,000, and the Department of National Health and Welfare which spent \$20,800,000. It should be noted that certain research expenditures for environmental health and radiation protection, previously reported by that Department, were considered as expenditures of the Department of the Environment in 1970-71, and were not classified under "health".

Federal grants supporting health science research in universities and hospitals have been channelled mainly through the Medical Research Council (see below), although significant outlays are made by other agencies in special fields such as public health, health-care systems, and defence. The Medical Research Council spent \$34,000,000 in 1970-71, of which \$15,572,000 was allocated for annual grants-in-aid, \$7,478,000 for three-year term research projects, \$1,466,000 for equipment grants, \$7,901,000 for research scholarships

and fellowships, and \$1,545,000 for other research promotion. These amounts are in support of dental and pharmaceutical research as well as medical research.

In 1970-71, the Department of National Health and Welfare accounted for a large part of Federal Government intramural expenditures on research and development studies and related scientific activities in health fields; expenditure amounted to \$5,800,000 and the major outlays were in the fields of pharmacology, pharmaceutical chemistry, nutrition, microbiology, pesticides, food additives, clinical laboratory procedures, health services, prosthetics, epidemiology, and physical fitness. In the same year, the Department of Veterans Affairs supported a variety of clinical studies in chronic disease problems including psychiatric research, to the total of \$238,000, and studies in radiation biology and other life sciences important to health were conducted by the National Research Council.

The Department of National Health and Welfare in 1970-71 distributed \$3,600,000 under the Public Health Research Grant for applied and developmental research projects conducted by universities, hospitals, health departments, and other non-profit health organizations, and distributed \$1,950,000 under the National Health Grant. In addition, \$132,000 was given for physiological research under the Fitness and Amateur Sport Grant, \$63,000 for smoking and health research, \$174,000 for food and drug research, and \$300,000 for research into the non-medical use of drugs. The expansion of research facilities continues to be one of the key objectives of the Health Resources Program of the Department. It is estimated that \$9,100,000, about 40 p.c. of the Health Resources Fund expenditures in 1970-71, were used to build research facilities as an integral part of the program to expand the training of health personnel at medical and dental schools and affiliated centres.

Voluntary agencies supporting medical research related to their special interests include the National Cancer Institute, the Canadian Arthritis and Rheumatism Society, the Canadian Cystic Fibrosis Foundation, the Canadian Association for the Mentally Retarded, the Canadian Mental Health Association, the Muscular Dystrophy Association of Canada, and the Multiple Sclerosis Society of Canada. Research is also funded by provincial governments through various councils and foundations as well as through direct research grants. The Interdepartmental Committee on Medical Research, to which the voluntary agencies are invited, provides a forum for the sharing of information and support of medical research.

**The Medical Research Council.\***—The Medical Research Council (MRC) is the main channel through which the Federal Government provides financial support for research in the health sciences initiated and carried out in Canadian schools of medicine, pharmacy and dentistry. It existed in various administrative forms within the framework of the National Research Council since 1938 but in 1969, with the passage of the Government Organization Act, it became a departmental Crown corporation in its own right. It reports to Parliament through the Minister of National Health and Welfare but is completely separate from that Department. The Council itself is comprised of a full-time president appointed by the Governor in Council, a vice-president and 20 members, drawn chiefly from the universities, who serve without remuneration for terms of up to three years. The program is administered by a small full-time secretariat of scientific and administrative personnel.

Under the terms of its legislation, the MRC has authority "to promote, assist and undertake research in the health sciences, with the exception of public health research". The latter, by statute, is the responsibility of the Department of National Health and Welfare. Its program is divided into three main sectors—the Grants Program, Personnel Support Programs, and Research Development.

The Grants Program is by far the largest component of the MRC operation. Applications from investigators on the staff of Canadian universities and affiliated institutions are considered three times a year. The basis for this consideration is peer assessment; each

\* Prepared by the Medical Research Council, Ottawa.

application is reviewed by external referees expert in the field involved and then considered by one of 16 grants committees, each comprised of eight to 10 senior investigators drawn from universities, government and industry. The recommendations of these committees are then forwarded to Council and awards are approved to the extent that funds permit. Most are made on an annual basis but, where a research program of high merit has reached a stable level of expenditure, support in a specified annual amount may be provided for terms of three to five years. The grants are designed to provide for the normal operating costs of approved programs and for items of special research equipment; they may not be used for the remuneration of the investigator to whom the award is made.

The Personnel Support Programs provide opportunities for research training of graduates of high calibre at the postdoctoral level through Fellowship and Centennial Fellowship programs and, more recently, for training at the pre-doctoral level through a program of Studentships. These awards are all prize awards and the number of successful candidates is therefore limited. Many other research trainees, however, receive support through operating grants to the investigators who supervise their training. The MRC Associateship program provides continuing salary support for a limited number of highly qualified independent researchers working in universities and devoting at least 75 p.c. of their time to research and graduate teaching. The MRC Scholarship provides young investigators who have completed their formal research training with an opportunity to demonstrate in a university setting their potential for independent research without the necessity of, at the same time, carrying a heavy undergraduate teaching load; these awards are tenable for up to five years. Provision is also made for the exchange of information among Canadian scientists through the Visiting Professorship Program, and among Canadian scientists and their foreign colleagues by means of the Visiting Scientist Program under which Canadian investigators may spend up to one research year abroad or foreign scientists may spend periods of three to 12 months working in Canadian laboratories.

A significant portion of the MRC's developmental funds is used to assist in the correction of disparity, both regional and disciplinary, in Canada's research effort; universities attempting to build up programs in underdeveloped fields are encouraged to apply for Development Grants which are designed to assist the Deans of health science faculties in the recruitment of new staff by giving assurance of research funds and equipment and, if necessary, of salary support for periods of up to three years. A special Group program has been developed to provide research support to groups of two or more accomplished investigators who wish to engage in collaborative work in what appear to be especially productive areas. Investigators comprising MRC Groups are expected to devote virtually all their efforts to their common research objectives, and receive from the MRC what is essentially full support of their research program. There are now four MRC Groups—the Group in Neurosciences at the University of Montreal, the Group in Transplant Research at the University of Alberta, the Group in Developmental Neurobiology at McMaster University and the Group in Drug Toxicology at the University of Montreal. Under the heading of Research Development, the MRC also provides financial support for scientific symposia and workshops held in Canada, and assists in defraying the operating costs of the Canadian Council on Animal Care.

The MRC has taken the initiative in sponsoring clinical trials carried out on a national collaborative basis; the first is the Therapeutic Trial of Human Growth Hormone in the treatment of certain types of dwarfism and the second is a study of the efficacy of anti-lymphocyte serum in preventing rejection of renal transplants.

In addition to its responsibilities in the direct support of extramural research, the MRC is involved in the integration of health science research with other aspects of the Federal Government's activities in the health field and in the support of university-based research. Close liaison is also maintained with provincial and voluntary agencies in the health field through consultation at the working level and discussion at more formal meetings arranged at intervals.

The MRC welcomes consultations with the universities and with industry in matters relating to the support and development of health science research and, when desirable, is prepared to set up study groups for consideration of specific or general problems in this broad area.

### **Subsection 8.—International Health**

Canada actively assists and co-operates with the World Health Organization (WHO) and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Canada's term of office on the WHO Executive Board was terminated at the 24th World Health Assembly held in 1970.

Capital and technical assistance are provided to developing countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the various technical co-operation schemes (see pp. 199–203); during 1970, there were 296 trainees in Canada studying in a wide range of health disciplines under the Canadian International Development Agency program but with greatest concentration in undergraduate medicine and in public health. The number of arrivals for such training has progressively diminished since 1966.

Canadian experts in health legislation, health administration, nursing and related areas undertook specific assignments abroad during the year and teachers and specialists in a number of clinical fields were provided in response to requests from developing countries. Capital assistance, primarily through the provision of Cobalt-60 beam therapy units for cancer treatment centres in the Colombo Plan area, was continued. As a result of their visit to Viet-Nam in 1967, the Advisory Team on the Viet-Nam Medical Program recommendations regarding tuberculosis, rehabilitation, immunization, hospital equipment and other programs have been implemented, and the tuberculosis program was again reviewed during a visit by an expert in 1970. Projects for training in public health are under development in Viet-Nam and in Cameroon.

To carry out Canada's obligations under the International Health Regulations, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and medical care for persons arriving in Canada who require quarantine (see p. 288).

The Department is responsible for the enforcement of regulations governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States. Other responsibilities include the custody and distribution of biological, vitamin and hormone standards for the WHO and certain duties in connection with the Single Convention on Narcotic Drugs, 1961, as well as Canada's representation on the Narcotic Commission of the United Nations.

### **Subsection 9.—Consultative and Technical Services**

The Department of National Health and Welfare extends consultative and technical services to the provinces over a broad range of health activities. The consultant divisions of the Health Services Branch are concerned with: epidemiology including disease surveillance; communicable disease control as exemplified by the Canadian Communicable Disease Centre that serves as the national reference laboratory for diagnosis of bacterial and viral diseases; child and adult health including mental health, dental health and nutrition; and rehabilitation, emergency health and environmental health problems described elsewhere. The Department also provides technical advisory services to the provinces through its Health Insurance and Resources Branch, Research and Statistics Directorate and Health Information Division.

*The Computer Department for Health Sciences, Faculty of Medicine, University of Manitoba, has a staff of about 20 analyst, programming and operations technicians who use twin computers to assist the many medical research workers of the Manitoba Health Sciences Centre.*

## Section 2.—Provincial and Local Health Services

Provincial governments are primarily responsible for health measures to prevent disease and improve the health standards of the community. These comprise preventive health services, hospital services, treatment services for mental illness, tuberculosis and other diseases, and rehabilitation and care of the chronically ill and disabled. They are usually administered by the provincial health department or other official agency in co-operation with the hospitals and voluntary health organizations, the health professions and the teaching and research institutions.

Although the pattern of services is similar, provincial health organization, financing and administration vary to some degree. Most health functions are exercised by the provincial health departments but in some provinces, certain programs such as hospital insurance, medical care insurance, tuberculosis control, cancer control and alcoholism programs are administered by separate public agencies directly accountable to the minister of health. Voluntary organizations also provide specialized health services, often with some support from tax funds in the form of payment for services or support grants.

The provincial health departments carry out over-all planning and direction of public health programs, administer certain specialized health programs, and assist through technical and financial aid the regional or local health units and city health departments that have been delegated responsibility for the basic public health services. The health district or unit may be administered directly by the provincial health department, by a local health board accountable to it (or jointly with it), while city health departments are administered by municipal or metropolitan boards of health. Several provincial health departments also directly administer health services to northern unorganized territories. The nucleus staff of a local health unit or department usually is composed of a full-time medical officer of health, a number of public health nurses and a public health inspector.

Local official programs to safeguard community health are concerned with environmental sanitation to ensure safe water, milk and other foods; prevention and control of infectious diseases through use of vaccines and prophylactics; improvement of maternal and child health and dental health; registration of vital statistics; and health education and counselling. In addition, the larger city health departments have developed specialized services in such areas as mental health, home care, and rehabilitation of the chronically ill and the handicapped. Some local health services and departments in most provinces have started health screening for chronic conditions and family planning clinics. The city health departments participate to some degree with the provincial authorities in accident prevention and in measures to control air, water and soil pollution.

Provincial health departments support the local health services by grants-in-aid and consultant and research services. Most mental and tuberculosis hospitals and clinics are provincially operated, as are the treatment services for venereal diseases, cancer, alcoholism and other specific diseases, and the public health laboratories that aid both the health agencies and practising physicians in diagnostic and control procedures. The provincial agencies are primarily responsible for the collection and analysis of vital statistics and the study of the epidemiological and related social and economic conditions that affect health. They also give leadership in such fields as occupational health, nutrition, health education and pollution problems in collaboration with national health agencies. In order to maintain and improve health services, the provincial health departments recruit and train professional and technical personnel for the health fields and support public health research.

#### Subsection 1.—Public Health Services

**Environmental Health.**—Environment is the sum of all social, biological, physical and chemical factors that make up man's surroundings, and deterioration and modification of the quality of that environment has emphasized the need for assessing the health implications and for developing and stimulating the use of methods to control or eliminate harmful factors.

*New laboratory facilities in the Renal Division of the Clinical Investigation Unit of Winnipeg General Hospital, used in the investigation of patients with high blood pressure. The Unit has 16 laboratory areas involved in research and patient care.*

As technological advances continue, there is an ever-increasing injection of man-made products into the air, water and soil environment, usually as waste or byproducts and often at low concentrations, and many of these pollutants are known to affect health. The relationship between deleterious pollutants and their effects on health depends on such factors as their concentration and the duration of exposure. Of particular importance are the possibility of some or total recovery between periods of exposure, the variability in susceptibility to disease from individual to individual, and effects associated with simultaneous or superimposed exposure to two or more pollutants. The considerable evidence of potential long-term serious consequences of environmental pollution on health justifies the present concern and the need for increased activity.

Programs to protect workers in their occupational environments have been carried on by occupational health officials for a number of years but it is only recently that health officials have been directing their attention to health hazards in the general environment. For example, although there is a long history of activities concerned with the health effects of noise in the industrial and agricultural environment, attention is now being focused also on the health effects of community noise.

The various agencies in Canada concerned about environmental health are in process of developing and implementing programs to assess and determine the health effects and to assess and control air and water pollution, radiation, industrial toxicants, and other factors of the general, occupational and home environments known to be, or suspected of being, deleterious to human health. The complexity of their task requires the work of specialists in a variety of disciplines falling within the broad spectrum of physical, life and engineering sciences and the co-operative efforts of governments and other agencies. Individual tasks include field surveys and interpretation of air and water pollution, research into health effects and their causes from all kinds of toxicants, development of guides and standards for pollutants such as chemicals and other hazards in both the working and general environment, and the specifying of health and safety standards for radiation-emitting devices.

The Federal Government discharges its responsibilities in environmental health through the Environmental Health Directorate of the Department of National Health and Welfare by providing regulatory authorities with the most authoritative assessments of the effect of environmental factors on human health and carrying out its statutory activities in the related fields of radiation protection and occupational hygiene.

Seven of the 10 provinces have agencies in their Health Departments to deal with occupational and environmental health problems. As with the Federal Government, there is close liaison between the health officials and officials responsible for assessment and control of the environment. Co-ordination of the many activities within provinces and between the provinces and the Federal Government is usually provided by advisory boards and committees.

**Occupational Health.**—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industrial management. Provincial agencies regulate working conditions and offer consultant and education services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting standards for health safety and accident prevention on the job. Most provinces maintain environmental health laboratories that study industrial health problems such as the effects of noise and air conditions on workers.

**Communicable Disease Control.**—The larger provincial health departments have separate divisions of communicable disease control headed by full-time epidemiologists whereas in the smaller provinces this function is combined with one or more community health services. Local health authorities organize public immunization clinics against diphtheria, tetanus, poliomyelitis, whooping cough, smallpox and measles. They also engage in case-finding and diagnostic services in co-operation with public health laboratories and private physicians. Special services for tuberculosis and venereal diseases are noted on p. 305.

**Health Education.**—Most provincial health departments have a division or unit of health education directed by a full-time professional "health educator" to promote public knowledge of health needs and measures. This division or unit provides education materials to other divisions of the health department, to local health authorities, to voluntary associations, and to individuals. Many educational activities are directed to accident prevention and to reducing habits harmful to health, such as cigarette smoking and the excessive use of alcohol and drugs. All health workers carry out health education as part of their normal activities.

**Public Health Laboratories.**—All provinces maintain a central public health laboratory and most have branch laboratories to assist local health agencies and the medical profession in the protection of community health and the control of infectious diseases. Public health bacteriology (testing of milk, water and food), diagnostic bacteriology and pathology are the principal functions of the laboratory service, with medical testing for physicians and hospitals steadily increasing in volume.

**Maternal and Child Health.**—Public health nurses employed by the local health services carry out preventive health services to mothers and children through clinics, home and hospital visits and school health services. All provincial health departments have established maternal and child health consultant services that co-operate with the public health nursing services. The maternal and child health services also undertake studies in maternal and child care, including hospital care, and assist in the training of nursing personnel.

**Nutrition.**—Provincial health departments and some city health departments employ consultants in nutrition to extend technical guidance and education to health and welfare agencies, nursing homes and other care institutions and hospitals. They provide diet counselling to selected patient groups, such as diabetics, and conduct nutritional surveys and other research.

**Dental Health.**—Provincial dental public health programs have been largely preventive but increasing emphasis is now being given to dental care. Dental clinics conducted by local health services are usually restricted to pre-school and younger school-age groups. A number of provinces send dental teams to remote areas and subsidize resident dentists to practise in areas lacking such services; the four western provinces have dental care schemes of varying coverage for welfare recipients. Other dental health programs are directed to the training of dentists and dental hygienists, the conduct of dental surveys and the extension of water fluoridation.

### Subsection 2.—Mental Health Services

Mental health services in Canada are organized as part of provincial health services. Each province employs a director of mental health services, usually a psychiatrist, and one or more consultants in psychiatric nursing, clinical psychology, social work, occupational therapy or special education and also one or more psychiatrists specializing in paediatrics, geriatrics, mental retardation, alcoholism and drug addiction, or other related fields. As public health officers, the mental health directors are responsible for the development of programs aimed at prevention of mental disease and for the general promotion of mental health, on their own and in co-operation with welfare, education, manpower,

labour, and justice departments. As psychiatrists, they are responsible for development and supervision of the various health facilities for the treatment of people who suffer from mental or emotional disorders including disorders of character and behaviour, the mentally retarded, people with damage to the nervous system, alcoholics and drug addicts.

Mental health services differ in detail and stage of development from province to province; all are being extended and improved to take advantage of the best methods of treatment and prevention. The traditional pattern of long-term care of the mentally ill and retarded in large isolated mental hospitals and in hospitals for mental defectives is giving way to new patterns of care designed to cure the afflicted or, failing that, to provide living and working environments for them in which they may lead reasonably normal lives.

The mental hospitals now place less emphasis on custodial care and more on intensive psychiatric treatment. They admit voluntary patients who receive much the same care and treatment as they would receive as patients in a general hospital. Many of those who would not profit from intensive psychiatric treatment—the severely retarded and people with severe mental deterioration—are supported under welfare auspices in sheltered workshops, nursing homes or foster homes and continue to receive medical care. In addition to the mental hospitals, some special “psychiatric” hospitals provide intensive psychiatric care over short periods, and psychiatric units and out-patient psychiatric departments are being established in large general hospitals. Local authorities or provincial health departments operate mental health clinics in most large cities and travelling clinics visit suburban and rural areas. Psychiatric hospitals and mental health clinics are establishing more day-care and night-care facilities through which some patients receive part-time hospital care and therapy during the day and go home at night and others go to work during the day and return to hospital in the evening for treatment.

Extending mental health services into the community aims at preventing severe mental and emotional breakdowns and at reducing the number of people requiring treatment in institutions. Under the terms of the federal-provincial medical care legislation, in effect in all provinces and the Northwest Territories in 1971, the services of private psychiatrists should become more widely available. Through early diagnosis and treatment in a mental health clinic or out-patient department of the hospital in the patient's neighbourhood, he may continue to live at home and pursue his normal occupation while receiving treatment.

Special centres have been established for the study and treatment of alcoholism and drug addiction, criminal psychopathy, psychiatric disorders in children, brain injuries and other neurological disorders. Studies recently instigated by the Federal Government in these and related areas include a survey of residential and in-patient services for emotionally disturbed children and the appointment of the Commission of Inquiry into the Non-medical Use of Drugs. The interim report of its findings and recommendations was tabled in the House of Commons on June 19, 1970. In addition, the provinces are amending the pertinent legislation in order to guarantee the rights of the mentally ill, the emotionally disturbed and the intellectually retarded.

The continuing efforts by provincial health departments to provide more and better mental health services reflect growing enlightenment about mental health on the part of the medical profession, the general public and government agencies. Improvement in the care of psychiatric patients has been fostered by activities of voluntary organizations such as the Canadian Mental Health Association and the Canadian Association for the Mentally Retarded; by the professional advice of the Canadian Medical Association and the Canadian Psychiatric Association; by the national health grants and the national welfare grants for new services, professional training, and scientific research; and through the information programs of the Mental Health Division of the Department of National Health and Welfare.

In the field of mental retardation, the Federal Government instituted a Mental Retardation Grant in 1967-68 over a five-year period to support health and welfare demonstration and research projects conducted by voluntary agencies for the mentally retarded. The amount allocated to this grant was \$500,000 annually for the period 1967-68 to 1969-70,

and \$400,000 for 1970-71 and 1971-72. Mental health research funds allocated under the Public Health Research Grants amounted to \$617,000 in 1970-71 and \$525,000 in 1971-72.

### Subsection 3.—Services for Specific Diseases or Disabilities

**Tuberculosis.**—New active cases of tuberculosis in Canada in 1969 numbered 4,438 or 21 per 100,000 population, and in 1970 the total was 3,920 or 18 per 100,000 population. Reactivated cases reached 680 in 1969 and 620 in 1970. Deaths again decreased, to 526 in 1969. Provincial health departments, assisted by voluntary agencies, conduct anti-tuberculosis case-finding programs through community tuberculin-testing and X-ray surveys, with special attention to high-risk groups, hospital admission X-rays, and follow-up of arrested cases. BCG vaccine, estimated to be effective for 80 p.c. of those vaccinated, is used in most provinces to protect certain high-risk groups; in Quebec and Newfoundland, children are routinely immunized. Treatment, including hospital care, drugs and rehabilitation, is free in all provinces. Chemotherapy has shortened hospital stay and facilitated out-patient or domiciliary care. An annual federal grant of \$20,000 is made to the Canadian Tuberculosis and Respiratory Disease Association to improve tuberculosis services across the country.

The National Tuberculosis Reference Centre in Ottawa was opened in 1968 to establish uniform standards in testing for resistance to anti-tuberculosis drugs.

**Cancer.**—Cancer in 1969 accounted for 19.2 p.c. of all deaths in Canada, and the standardized cancer death rate increased to 140.7 (156.0 for males and 125.2 for females). It is estimated that in Ontario, for example, one in every three residents may expect to develop some form of cancer. In Canada, cancer ranks second highest as a cause of death and over 91 p.c. of the deaths from cancer occur after 45 years of age. Special provincial agencies for cancer control, usually in the health department or a separate cancer institute, carry out cancer detection and treatment, public education, professional training, and research in co-operation with local public health services, physicians and the voluntary Canadian Cancer Society branches. Although the provisions are not uniform, all cancer programs provide a range of free diagnostic and treatment services to both out-patients and in-patients, financed by the hospital insurance programs or the federal-provincial cancer control grants. Hospital insurance benefits for cancer patients include diagnostic radiology, laboratory tests and radiotherapy. The cancer control programs in Saskatchewan and New Brunswick also pay for medical and surgical services; in most provinces these costs are covered under the public medical care insurance schemes.

**Venereal Diseases.**—Because of under-reporting, public health authorities consider the prevalence of venereal diseases to be much higher than the number of cases recorded. In 1970 there were 2,501 cases of syphilis and 31,544 cases of gonorrhoea reported in Canada. Provincial health departments operate clinics which provide free diagnostic and treatment services in most of the larger cities. In addition, some provinces supply free drugs to physicians treating cases in private practice. The local public health departments are concerned with case-finding, follow-up of contacts, and maintenance of health education programs.

**Alcoholism.**—In all provinces, health departments or other official agencies administer programs for the prevention and control of alcoholism, including public education and related studies. Conservative estimates place the number of Canadians currently requiring these services at 270,000, if a clinical definition of alcoholism is used. Treatment services available are mainly for out-patients but, with the increasing awareness of need, most provinces have expanded facilities for in-patient services. Other facilities operated by official and voluntary agencies include hostels and special farms or prison centres for chronic offenders with drinking problems. In several provinces, alcoholics are treated in detoxication wards rather than in jails. Provincial alcoholism agencies in Ontario, Quebec

*The Nuclear Medicine Department of Vancouver General Hospital, in collaboration with University of British Columbia investigators, has introduced a new test for thyroid function. It is a radioactive test-tube test that can be done quickly and inexpensively and has a diagnostic accuracy of 98.8 p.c.*

and Saskatchewan have broadened their programs to include other addictions, and British Columbia supports a separate narcotic addiction foundation. Because addictions are widely prevalent, street clinics, hospitals, mental health services, and other public and voluntary health and social agencies are also involved in their diagnosis and treatment.

**Other Diseases or Disabilities.**—Many services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been initiated by voluntary agencies assisted by federal and provincial funds. Today, treatment for specific conditions is available at hospital out-patient clinics and in-patient or day centres, at separate clinics and rehabilitation centres and under home-care programs.

#### **Subsection 4.—Public Medical Care Insurance and Programs**

**Genesis of Provincial Plans.**—Prior to the establishment of government-administered medical insurance in all provinces over the past few years, prepayment arrangements to cover the cost of physicians' services, mainly voluntary as regards enrolment, had developed rapidly in both the public and the private sectors. By the end of 1968, basic medical or surgical coverage, or both, was being provided to about 17,167,000 Canadians, representing 82.0 p.c. of the population. At the end of 1969, when public medical care programs were operating in seven provinces, total insurance coverage for physicians' services was 18,885,000 or 88.8 p.c. of the population; public plans accounted for coverage of 70.8 p.c. of the total population or 15,058,000 persons (8,797,000 more than in the previous year) and private plans for coverage of 18.0 p.c. of the population. By April 1971, almost all of the population—over 21,000,000 persons—was covered under public auspices.

Not all aspects of private insurance for physicians' services were phased out after 1968. In Saskatchewan, two non-profit private plans continued as fiscal intermediaries to transmit claims and payments between physicians and the public insurance administration. In

Ontario, British Columbia and Nova Scotia, certain private insurance agencies continued as non-profit carriers performing administrative functions, such as enrolment, checking eligibility and paying claims, on behalf of or under the supervision of the public insurance authority. In other provinces the tendency was to absorb the administrative apparatus of the private agency into the public authority. Whether integrated or not into the public insurance authority as regards physicians' services insurance, several private plans have continued to offer policies to protect against the costs of prescribed drugs, private-duty nursing care, services of paramedical personnel, and other services not yet covered by the government plans.

**Provincial Public Plans.**—Each of the 11 plans in operation is described briefly in the paragraphs that follow, in chronological order of entry into the national program. Although most doctors are paid on a fee-for-service basis, alternative or additional arrangements include salary, sessional payments, contract service, capitation,<sup>1</sup> and incentive pay. The program descriptions relate to operations, in most provinces, of the principal agency making payments for physicians' services. Such agencies do not represent the total public involvement in medical care since payments may also be made by workmen's compensation boards, by the hospital insurance administrations or, for certain groups excluded from the coverage provided by the provincial agencies, by the federal or other jurisdictions responsible.

*Saskatchewan.*—This program, introduced in July 1962, requires enrolment of the entire eligible population. The premiums are compulsory and amount to \$24 a year for a family and \$12 a year for a single person; they cover only a small portion of the program costs. Welfare recipients are automatically covered and no premium payment is required of them and, as of Aug. 1, 1971, premium-payment requirements for family heads 65 years of age or over were abolished.

The program description here is confined to the operations of the Medical Care Insurance Commission, which is the principal administering agency for the over-all provincial public authority concerned with prepaid medical care. The Commission makes payments to doctors for the bulk of the services provided under the program. A segment of the population obtains its insured services under terms and conditions identical to those observed by the Commission but by way of a separate administering agency known as the Swift Current Health Region. Also, the provincial authority arranges for payment for care in mental and tuberculosis institutions and for cancer control.

In the program of the Commission, medical benefits include home, office and hospital visits, surgery, obstetrics, psychiatric care outside mental hospitals, anaesthesia, laboratory and radiological services, preventive medicine, and certain services provided by dentists. There are no waiting periods for benefits and no exclusions for reasons of age or pre-existing health conditions. Refractions by optometrists are also an insured benefit.

The Commission pays 85 p.c. of the 1968 physicians' fee schedule for most office and home visits.

Physicians may elect to receive payment in three ways. First, the physician may receive directly from the public authority payment of 85 p.c. of the tariff in the 1968 fee schedule of the Medical Association, and accept this payment as payment in full. Secondly, patients and physicians may enrol voluntarily with an "approved health agency" that serves as intermediary with respect to payment between the public authority and the physicians; here also the physician receives 85 p.c. of the tariff. Thirdly, a physician may elect to submit his bill directly to the patient who pays him either before or after seeking reimbursement from the public authority; the physician may bill the patient directly for amounts over and above what the public authority has paid. No physician is compelled to confine himself to one or another of these modes of payment.

*British Columbia.*—The province became a participant under the federal Medical Care Act on July 1, 1968. The plan is governed by a public commission with jurisdiction over a number of "licensed carriers", which are non-profit agencies charged with responsibility

for day-to-day management of the separate components of the program. In addition to physicians' services and a limited range of oral surgery in hospital, the benefits include refractions by optometrists, some orthoptic services, limited physiotherapy, special nursing, chiropractic, and naturopathy services.

Participation in the program is voluntary. Premiums are \$5 a month for single persons, \$10 a month for two-person families, and \$12.50 a month for families of three or more. For eligible residents, the government offers subsidies amounting to 90 p.c. of the premium for persons with no taxable income and 50 p.c. of the premium for persons with taxable income from \$1 to \$1,000. Welfare recipients are automatically covered without payment of premium.

Payment is made at 90 p.c. of the current fee schedule. Physicians either bill patients for services rendered or accept payments directly from a licensed carrier. In the former case the physician has to notify the patient in writing before rendering a service that he is a non-participating physician, and the patient has to agree in writing that he is prepared to pay more than the amount of reimbursement that he may receive from the public authority. In the latter case, the physician may also charge a fee in excess of the tariff, provided the patient has been duly notified, he agrees in writing to the extra charge, and the amount of the extra charge is made known to the commission.

*Newfoundland.*—This province became a participant on Apr. 1, 1969. The plan covers all medically required services by doctors, plus a limited range of oral surgery in hospital. Refractions by optometrists are not a benefit. All eligible residents are covered and there are no premium levies; the provincial portion of total costs for insured services is met from general revenue.

Benefit payments are limited to 90 p.c. of the fee schedule. Physicians must formally select, and use exclusively, one of the modes of payment available. A participating physician must accept 90 p.c. of the fee-schedule amounts as payment in full. A non-participating physician may impose additional charges provided he informs the beneficiary that he is not a participating physician and that he reserves the right to charge in excess of the amount payable by the plan. Traditionally, large numbers of doctors in Newfoundland contracted with the provincial government and with certain voluntary agencies to receive salaries for service in outlying areas; these arrangements are still in force.

*Nova Scotia.*—Nova Scotia became a participant on Apr. 1, 1969. All eligible residents are covered. Registration is required but there are no premiums, the entire amount of the provincial portion of the costs of insured services being obtained from general revenues. Insured services include all medically necessary procedures by practitioners, plus a limited range of oral surgery procedures in hospitals. Refractions by optometrists are not an insured benefit.

Benefit payments by the plan are made at 85 p.c. of the current fee schedule. Physicians must elect either to participate, that is, accept all payments directly from the plan, or not to participate. In either case, physicians may extra-bill but they must obtain written consent from the patient prior to rendering the service, and the amount of the extra charge has to be made known to the commission.

The Nova Scotia plan is administered by a non-profit carrier designated by the public authority as its sole agent with respect to fee-for-service accounts. This agency carries out all functions relating to eligibility checking and the processing and payment of claims, subject to review and audit by the public authority.

*Manitoba.*—Manitoba began participating under the federal Medical Care Act on Apr. 1, 1969. Enrolment is compulsory for all eligible residents but failure to pay the required premiums is not a barrier to receipt of insured services. Premium levies are 55 cents a month for single persons and \$1.10 a month for families. Coverage of welfare recipients is automatic without premium payment. There are no premium subsidies. The insured benefits cover all medically required services provided by medical practitioners and limited dental surgery in hospitals. Also included, with limitations, are the services of chiropractors and refractions by optometrists.

Physicians may elect to participate in the plan and to accept all payments from the public authority, or they may elect to receive payments direct from all their patients. In the former case, the amount received (85 p.c. of the fee schedule) must be accepted as payment in full. A non-participating physician must give a patient "reasonable notice" if he intends to extra-bill.

*Alberta.*—Alberta became a participating province under the federal Medical Care Act on July 1, 1969, with administration by a Health Care Insurance Commission.

In addition to physicians' services and a limited range of oral surgery, which are cost-shared with the Federal Government, the Alberta program includes refractions by optometrists, services and appliances provided by a podiatrist, and a limited range of osteopathic services.

The combined annual premium of \$69 for single persons and \$138 for families covers both medical and hospital insurance. Subsidies reduce the premiums to \$24 for single persons and to \$48 for families with no taxable income in the previous year; to \$36 for single persons whose taxable income does not exceed \$500; and to \$72 for families whose combined taxable income does not exceed \$1,000. Registration and payment of applicable premiums is compulsory. Failure to comply makes householders liable, at time of seeking service, for payment of back premium levies, plus a penalty of 10 p.c. of the unpaid premium. Residents objecting in principle to claiming benefits under the program can elect to remain outside the program (to "opt out") and not be liable for premium payment. For hospital and related care, they are at liberty to obtain private insurance coverage but application of the federal Medical Care Act prevents private carriers from offering insurance for physicians' services.

The plan also offers subscribers the option of purchasing insurance for additional health services (again, with subsidy provisions) from the voluntary Alberta Blue Cross agency. Rates, applicable to non-group enrolees only, are lower than regular non-group coverage offered by this agency but slightly higher than regular group rates. The optional membership offers coverage for hospital differential charges for semi-private and private ward care, ambulance services, drugs, appliances, home nursing care, naturopathic services, clinical psychological services, and dental care needed because of accidental injury. Since July 1, 1970, payments to physicians have been made at 100 p.c. of the 1969 fee schedule.

*Ontario.*—Ontario began participating on Oct. 1, 1969. Enrolment is compulsory for persons in specified employed groups and voluntary for others. The insured benefits currently cover all medically required services of medical practitioners and of oral surgeons in specified hospital settings, refractions by optometrists, and coverage, with limitations, of certain paramedical services offered by chiropractors, osteopaths and podiatrists.

Payments are made at 90 p.c. of the current fee schedule. Physicians may choose various modes of payments but are not required to enter into a formal commitment to confine themselves to any given mode. Regardless of the mode of payment selected, a physician is required to advise the patient of any intention to charge more than is provided under the plan. These arrangements were under legislative review late in 1971, with the intention of requiring physicians to continue their billing to one of the alternative modes. Premiums are \$5.90 a month for single persons, \$11.80 a month for two-person families, and \$14.75 for families of three or more. Coverage is automatic for welfare recipients and no premium payment is required for them. Subsidies for low-income families modify premiums as follows. (1) For those with no taxable income in the previous year—full premium assistance (i.e., 100-p.c. subsidy). (2) For those with some taxable income—\$2.95 a month (i.e., 50-p.c. subsidy) for single persons if taxable income in previous year was \$500 or less; \$5.90 a month (i.e., 50-p.c. subsidy) for two-person families if combined taxable income in previous year was \$1,000 or less; and \$5.90 a month (i.e., 60-p.c. subsidy) for families of three persons or more if combined taxable income in previous year was \$1,300 or less. There are two additional provisions relating to financial aid. Coverage for three months is paid for families qualifying for temporary assistance, and recipients of Old Age

Security pensions are entitled to full subsidy of premiums at permissible income levels higher than the ceilings set under the general subsidy program.

The public authority in Ontario makes use of administering agencies, which can be non-profit agencies or commercial insurance companies handling this component of their activities on a non-profit basis. Agencies can be "designated" or "participating" depending upon the degree of their involvement in enrolment and claims-processing functions. Most of their enrolment is of employee and other groups. Additionally, the Ontario Health Services Insurance Plan itself enrolls members and processes claims and covers the majority of non-group and subsidized beneficiaries.

By late 1971, the activities of many of the private carriers were being phased out and their administrative functions absorbed into the program of the public carrier.

*Quebec.*—This province entered the national program on Nov. 1, 1970. Registration of all eligible residents is compulsory and, as with other plans, the benefits include all medically required physicians' services and also refractions by optometrists and a limited range of dental services. The medical services are provided for the most part by doctors engaged in private fee practice, and they are paid for on the basis of claims submitted. Doctors who participate receive their entire remuneration, directly or indirectly, from the provincial agency—the Quebec Health Insurance Board—in accordance with a negotiated schedule of benefit payments for each service provided, and they cannot extra-bill. They may choose to be paid directly by the Board, or indirectly by the patient, who is reimbursed by the Board. Doctors who choose not to participate must collect all fees (except for emergency care) from the patient, who cannot, as in other provinces, seek reimbursement from the provincial agency but must personally pay the entire amount.

The provincial portion of costs is met in part from general revenues and in part from an income tax surcharge and special employer contributions. The tax is 0.8 p.c. of net income exceeding \$4,000 if married and \$2,000 if single. Maximum annual contribution is \$125 for tax-paying employees who derive at least three quarters of their income from wages or salaries, and \$200 in other cases. Employers contribute 0.8 p.c. of payrolls.

*Prince Edward Island.*—The province began participating on Dec. 1, 1970. Benefits are comparable to benefits in other provinces that restrict services to those specified under the federal Medical Care Act. Registration is required but is not a condition of eligibility. All funds required to meet the provincial share of costs are obtained from general revenue sources. Doctors who elect to collect directly from patients can extra-bill but only up to the amount for the service as listed in the medical association fee-schedule, and only after they have told the patient their intention, obtained the patient's written consent, and notified the provincial agency of the amount. Doctors who elect, alternatively, to bill the provincial agency directly are paid 85 p.c. of the fee-schedule amount. This they must accept as payment in full unless, again, they notify the patient of their intention to extra-bill for the additional 15 p.c. and obtain his written consent.

*New Brunswick.*—The province began participating on Jan. 1, 1971. Registration by family head is required, although it is not an eligibility requirement. Doctors must indicate whether or not they intend to participate in the plan; if they participate they are obliged to accept 87 p.c. of the current fee-schedule amounts as payment in full (except for inclusive obstetrical services provided by a specialist, for which he can bill the patient an extra \$43.50). Doctors who elect to deal directly with particular patients with regard to payment may extra-bill, and in so doing are not limited to 13 p.c. of the fee in the schedule, provided the patient is informed beforehand. The New Brunswick plan, like others, is generally comprehensive, including limited oral surgery in hospital.

*The Northwest Territories.*—The Northwest Territories entered the national program on Apr. 1, 1971. Doctors who elect to submit accounts to the territorial insurance agency must accept as payment in full the amounts set forth in the agency's benefit schedule. Those who choose to collect directly from patients must initially inform the agency and then the patient of their intention. As in the four Atlantic Provinces, refractions by optometrists are not insured benefits.

Because of isolated conditions in this far northern area, some doctors work as salaried employees even though payments made by the insuring authority are on a fee-for-service basis.

**Health Care Programs for Welfare Recipients.**—Provincial programs providing certain medical care and other health care benefits to recipients of welfare allowances were in operation in all provinces prior to the introduction of province-wide medical care insurance. Following the implementation of such plans, provincial welfare recipients became automatically enrolled, without premium payment, with benefits identical to those for the general population. Co-charges, when and where applicable, and extra-billing are usually waived, and there may be coverage for such not-generally insured physicians' services as travelling mileage and telephoned advice. By April 1971, virtually all recipients of allowances were covered for physicians' services under the provincial medical plans. Hospital care insurance programs in every province provide automatic coverage to welfare allowance recipients without payment of premiums or co-charges by them.

The provision of other health-care benefits continues to follow a variety of patterns established under provincial or municipal programs with 50 p.c. of the costs assumed by the Federal Government under the Canada Assistance Plan.

All generally used prescription drugs are included in Newfoundland, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia; extensive dental care and optical care are provided in the four westernmost provinces, although certain services may be subject to special authorization, to dollar limits, or both. Ontario has a basic dental-care program for recipients of mothers' and dependent fathers' allowances and their children, and shares the cost of prescribed optical care, prosthetic appliances, drugs and dental care provided at municipal discretion. Such services as home nursing, appliances, physiotherapy, podiatry, chiropractic and emergency transportation may also be paid under some programs.

### Subsection 5.—Services for the Disabled and Chronically Ill

In recent years rehabilitation programs for injured workers, veterans, handicapped children, and other disability groups have been extended to all handicapped persons. Physical medicine and rehabilitation departments have been established in teaching hospitals and most veterans' and children's hospitals. Specialized rehabilitation centres number some 22 in-patient facilities, of which eight are for children and five are operated under workmen's compensation programs. Services for veterans are dealt with at pp. 365-366.

Hospital services available to in-patients and out-patients include physical medicine, physiotherapy, occupational therapy and social services; most of the children's hospitals and the teaching hospitals also supply speech therapy. The rehabilitation centres provide comprehensive medical, psychosocial and vocational services to more severely disabled persons. Provincial and community agencies providing rehabilitation and home care services co-operate in the rehabilitation of disabled persons.

Most large general hospitals operate out-patient clinics for various diseases and disabilities, such as arthritis and rheumatism, diabetes, glaucoma, speech and hearing defects, heart diseases and orthopaedic and neurological conditions. Voluntary agencies concerned with such specific disability groups as arthritics, the blind, the deaf, children suffering from cystic fibrosis, haemophilia or muscular dystrophy, the mentally ill or retarded, or disabled persons generally, are also broadening their rehabilitation services to include counselling, personal aids and appliances, transportation, employment and education, sheltered workshops and services for the homebound. Home-care programs, under either hospital or community sponsorship, have been established in most provinces to provide nursing, homemaker, physiotherapy and other services to the disabled, the chronically ill, the aged, and the convalescent.

Provincial health, welfare and education departments and voluntary agencies are developing specialized services for physically and mentally handicapped children. Most provinces have registries of handicapped children, of varying coverage, and these are being found increasingly useful in the planning and co-ordination of rehabilitation services.

In addition to medical rehabilitation, health departments and the voluntary societies for the handicapped provide family counselling, recreation, transportation and foster-home care; in most provinces travelling clinics extend periodic diagnostic and treatment services to outlying areas. Special schools or classes for various groups of handicapped children are operated by local school boards in the main cities, but most of the 17 residential schools for the deaf and the seven for the blind are operated under provincial auspices.

Regional prosthetic research and training units, supported by National Health Grants, have been set up in rehabilitation centres in Montreal, Toronto and Winnipeg, and in the Bio-Engineering Institute of the University of New Brunswick. Artificial limbs and prosthetic appliances are made available in 12 federally operated prosthetic centres across Canada in accordance with provisions determined by provincial health departments. A federal-provincial program assists in the extraordinary rehabilitation, maintenance and counselling costs on behalf of children with thalidomide-induced defects.

Eleven university schools offer training in physical therapy and/or occupational therapy and four provide training in audiology and speech therapy. In the year ended Mar. 31, 1971, of the \$22,888,849 made available through the General Health Grants to assist the provinces in their rehabilitation programs, \$1,367,290 was specifically allocated to the Medical Rehabilitation and Crippled Children Grant. These grants are used to extend treatment services, to develop medical rehabilitation personnel through grants to the university schools and student bursaries, and for equipment and research.

### Section 3.—Emergency Health Services

In 1951 when the responsibility for civil defence was transferred from the Department of National Defence to the Department of National Health and Welfare, the Civil Defence Health Services group was formed within the Department to make plans for health services in a wartime emergency. In 1959, the Civil Defence Order assigned special powers and duties to several Ministers to prepare, and to assist the provincial and municipal governments to prepare, for war emergencies (this Order, as amended in 1963, was replaced in 1965 by the Civil Emergency Measures Planning Order) and the Canada Emergency Measures Organization was created to co-ordinate civil-defence planning (see Chapter XXV, Sect. 7).

*With the use of electronic equipment, a deaf child can learn to speak and to function effectively in a hearing world. The aim of McGill University's Speech and Hearing School of Human Communication Disorders is to train as many youngsters as possible so that they may enter regular schools and not be segregated from normal children.*

*Students and teachers are given an insight into the services provided by the Ontario Crippled Children's Centre in Toronto during open house that marked the Society's 50th anniversary. About 14,500 Ontario physically handicapped children receive assistance through the Society.*

The Emergency Health Services Division, established in 1949 by the Minister of National Health and Welfare in his own Department, encourages, with the support of an advisory committee, the provinces to develop their own emergency health services divisions. These are organized under a provincial director who is generally assisted by a health-supplies officer and a nursing consultant. A staff medical officer represents the federal Emergency Health Services in each province.

The provincial emergency health services have four tasks: they ensure effective functioning of health services so that vital health services will be maintained in an emergency or reorganized after a disaster; they encourage and co-ordinate local planning for the development of emergency medical units; they inform and educate the public through courses in first aid to the injured and in home nursing, and train professional health workers, students and volunteers for their functions during an emergency; and they dispose emergency medical units of the national stockpile at strategic locations.

Not all provincial and municipal health departments have developed their emergency planning to such an extent that they could function in a wartime disaster. Some, however, have planned their emergency measures so that they have been able to meet peacetime disasters successfully. Many emergency medical units have been strategically located and the governments generally are agreed upon the objective of emergency health planning.

## **Section 4.—Hospital and Other Health Statistics**

The longest established health statistics series are those that measure mortality; the incidence of communicable diseases; the operations, facilities, staffing and finances of hospitals; and the morbidity experience of patients in special treatment hospitals. Hospital statistics were extended recently to include in-patient morbidity in all general and allied special hospitals and, even more recently, to show surgical operations performed in such hospitals. Other new series cover incidence of primary sites of cancer, incidence of therapeutic abortions and statistics of health manpower by occupational groups. These are direct statistical series and excerpts from all of them appear in the following subsections, except for mortality statistics which may be found in the Chapter on Vital Statistics, pp. 258-271. In addition, statistics on operations under the federal-provincial hospital in-

surance program are given at pp. 291-294 and those on physicians and their earnings at pp. 336-337. Statistics on the operation of provincial medicare plans may be obtained from provincial sources.

### Subsection 1.—Hospital Statistics\*

Canadian hospitals are categorized, for statistical purposes, according to (1) type of ownership—public, private or federal—and (2) type of service provided—general, allied special (chronic, convalescent, rehabilitation, maternity, communicable disease, children's or orthopaedic), mental or tuberculosis. General hospitals, which account for the largest proportion of beds, are divided into teaching (full and partial teaching) and non-teaching (with and without long-term units) types, which are further divided into varying bed-size groups based on rated bed capacity.

Data pertaining to the number of hospitals in operation (Table 5), their classification and rated bed capacities (Table 6) were available as at Jan. 1, 1971 at the time of preparation of this text but 1969 data were the latest available for all other tables in this subsection except Table 12.

Table 5 shows that the number and bed capacity of hospitals operating in Canada, with the exception of tuberculosis sanatoria, have remained relatively stable in recent years.

<sup>1</sup> Includes children's hospitals, formerly classified as general hospitals.

Table 6 shows the number and bed capacity of public, private and federal hospitals operating in Canada in 1970 and 1971, classified by province and by service type. The proportion of total rated bed capacity lodged in public hospitals rose slightly from 93.3 p.c. in 1970 to 93.7 p.c. in 1971, there being a corresponding decrease in private and federal hospitals. The proportion of rated beds in general and allied special hospitals has been generally increasing in recent years and decreasing in mental and tuberculosis hospitals. In 1971, general hospitals accounted for 57.1 p.c. of the rated beds compared with 56.3 p.c. in 1970 (5.6 beds per 1,000 population in both years). In both years also, Quebec had the

\* Prepared in the Institutions Section of the Health and Welfare Division, Statistics Canada. Detailed information will be found in the following Statistics Canada publications: Hospital Statistics, Vols. I to VII (Catalogue Nos. 83-210 to 83-216); Mental Health Statistics, Vol. III (Catalogue No. 83-205); Tuberculosis Statistics, Vol. II (Catalogue No. 83-207); Annual Salaries of Hospital Nursing Personnel (Catalogue No. 83-218); and List of Canadian Hospitals and Related Institutions and Facilities (Catalogue No. 83-201).

<sup>1</sup> Based on estimated population as at Jan. 1, 1971.

lowest rate of beds per 1,000 (4.7 in 1970 and 4.8 in 1971) and Saskatchewan the highest (7.2 in 1970 and 7.4 in 1971). Mental hospitals had 29.4 p.c. of rated beds in 1970 (2.9 per 1,000 population) and 28.5 p.c. in 1971 (2.8 per 1,000 population); allied special hospitals had 12.5 p.c. of rated beds in 1970 (1.2 per 1,000 population) and 12.8 p.c. in 1971 (1.3 per 1,000 population); and the remaining 1.8 p.c. in 1970 and 1.6 p.c. in 1971 (0.2 per 1,000 population in both years) were located in tuberculosis sanatoria. Rated beds per 1,000 population for all hospitals as a group decreased slightly from 10.0 in 1970 to 9.8 in 1971.

Total adult and child admissions to all Canadian hospitals exceeded 3,457,000 in 1969, an increase of 1.4 p.c. over 1968 and representing 164.1 patient admissions per 1,000 population. Although there appeared to be a decrease in admissions to general hospitals in 1969 to 3,201,831 or 152.0 per 1,000 population from the 1968 figures of 3,238,606 and 156.1, respectively, this was accounted for by the re-classification of children's hospitals from general to allied special status; combining general and allied special hospitals, admissions increased 1.5 p.c. in 1969 over 1968 and the combined rate reached 161.0 per 1,000 population in the later year. The rates of admission per 1,000 population for mental and tuberculosis hospitals decreased from 1968 to 1969 to 2.8 and 0.4, respectively. The average daily population in all Canadian hospitals was 178,559 in 1969, up slightly from 178,132 in 1968. Of the 1969 average, general and allied special hospitals accounted for 65.7 p.c. and mental hospitals for 33.0 p.c. compared with 65.0 p.c. and 33.4 p.c., respectively, in the previous year. Percentage occupancy varied with the type of hospital; in 1969 it was highest in private mental hospitals (95.5 p.c.) and lowest in public sanatoria (64.4 p.c.).

### 7.—Movement of Patients and Patient-Days in Operating Public, Private and Federal Hospitals, 1968 and 1969

NOTE.—"Patients" refers to adults and children. All ratios are based on population estimates as at June 1 of the year concerned.

<sup>1</sup> Children's hospitals in 1969 are classified in allied special—formerly in general.

<sup>2</sup> Based on rated bed capacity.

<sup>3</sup> Comparisons between 1968 and 1969 are affected by the fact that a large private general hospital was converted to a public general hospital.

<sup>4</sup> The only federal sanatorium in operation in 1968 was converted to a public general hospital in 1969.

The average length of stay of adults and children who were separated from public general hospitals in 1969 was 10.3 days, unchanged from 1968. This average ranged from 7.2 days in non-teaching hospitals with long-term units and 1-24 beds, to 12.5 days in non-teaching hospitals with long-term units and 200 or more beds. Generally, the length of stay increased with bed capacity—one result of the wider availability and utilization of more complex services in larger hospitals. Provincially, Alberta had the lowest average length of stay for general hospitals (8.9 days) and Ontario hospitals the highest (11.0). Hospitals within the allied special group recorded varying average lengths of stay—children's (8.9 days), convalescent/rehabilitation (45.3), chronic/extended care (237.6), and other (15.0). Average length of stay in public hospitals as a whole was 11.7 days.

As Table 9 shows, full-time personnel in all Canadian hospitals (excluding paid medical staff in general and allied special hospitals) numbered 316,825 in 1969. In all general hospitals, the number of full-time personnel per 100 rated beds was 199.5; provincially, this ratio varied from 154.1 in Alberta to 235.3 in Ontario. General and allied special hospitals combined experienced a ratio of 190.6 full-time personnel per 100 rated beds; in mental hospitals, this ratio was 75.9 compared with 71.2 in 1968 and in tuberculosis sanatoria, 92.9 compared with 91.6 in 1968. It is interesting to note that the proportion of the Canadian civilian labour force, both full-time and part-time, in all Canadian hospitals gradually increased from 3.7 p.c. in 1961 to 4.5 p.c. in 1969.

<sup>1</sup> Excludes paid medical staff.

Table 10 gives financial data related to public hospitals in operation during 1969. Revenues for general and allied special hospitals together totalled \$1,893,430,000, 14.2 p.c. more than in 1968. General hospitals alone accounted for 87.9 p.c. of total revenue received and experienced a 10-p.c. increase in revenue over the previous year. Net in-patient earnings accounted for 88.1 p.c. of general hospital revenues, ranging from 84.3 p.c. in the 1-24 bed non-teaching hospitals with no long-term units, to 90.6 p.c. in the 100-199 bed non-teaching hospitals with long-term units.

Consistent with the upward trend of costs in recent years, expenditures in public general and allied special hospitals totalled \$1,966,559,000, 14.1 p.c. more than in 1968, which in turn had been 16.5 p.c. higher than in 1967; general hospitals expended 87.8 p.c. of this amount. Gross salaries and wages accounted for 70.2 p.c. of total general hospital expenditures; this percentage varied from 64.2 in 1-24 bed non-teaching hospitals with no long-term units, to 71.2 in 100-199 bed non-teaching hospitals with long-term units. Mental hospitals and tuberculosis sanatoria reported a significantly different distribution of expenditures; gross salaries and wages amounted to 75.9 p.c. of expenditures in mental hospitals and for 73.1 p.c. in tuberculosis sanatoria.

# REVENUES AND EXPENDITURES OF PUBLIC HOSPITALS\* AND COST PER PATIENT-DAY, 1958-69

\*GENERAL, ALLIED SPECIAL, MENTAL AND TUBERCULOSIS

Table 11 shows the more than proportionate increase in gross salaries and wages as a component of total expenditures from 1968 to 1969; this component increased its share of the total by at least 1.5 p.c. in each province. As experienced in 1968, gross salaries and wages as a component of total expenditure was generally lower in the Atlantic Provinces than elsewhere in Canada.

<sup>3</sup> Includes medical staff remuneration.

Generally, salaries of hospital nursing personnel were 19.5 p.c. higher in 1970 than in 1968 and varied directly according to academic qualifications. For general-duty registered nurses employed in public general hospitals, the average annual salary varied from \$6,475 for those classified as graduate nurse only, to \$9,705 for those with a master's degree in nursing (Table 12). Among graduate nurses without additional qualifications in public general hospitals, directors of nursing education received the highest average salary (\$9,423) and general-duty nurses (not registered) the lowest (\$5,776). On the average, general-duty nurses (registered) without additional qualifications employed in hospitals designated "other" (maternity, communicable disease, orthopaedic and cancer hospitals), earned more (\$6,650) than their counterparts in other types of hospitals.

### 12.—Average Annual Salaries of Nursing Personnel in Public Hospitals, by Academic Qualifications, Employment Category and Type of Hospital, 1970

(Excludes shift differential pay)

Category	Average Salary	Category	Average Salary
	\$		\$
<b>Academic Qualifications—<sup>1</sup></b>		<b>Employment Category—concluded</b>	
Graduate nurse only.....	6,475	Assistant head nurse.....	7,262

Head nurse.....	7,922	Other.....	6,650

<sup>1</sup> General-duty (registered) nurse—public general hospitals.

<sup>2</sup> Graduate nurse without additional quali

fications—public general hospitals.

<sup>3</sup> General-duty (registered) nurse without additional qualifications.

The cost per patient-day in public general hospitals increased from \$48.44 in 1968 to \$53.73 in 1969; this 10.9-p.c. increase was somewhat less than the 11.6-p.c. increase experienced in 1968 over 1967. Among general hospitals, the per diem rate was lowest in the non-teaching hospitals with no long-term units and 1-24 beds (\$36.72) and highest in full-teaching hospitals with 1-499 beds (\$75.78). In the allied special group, children's hospitals had the highest per diem rate at \$86.89 and chronic/extended care hospitals had the lowest at \$22.23. All public general and allied special hospitals had a combined per patient-day revenue of \$51.75 and expenditure of \$53.73. Mental hospitals and tuberculosis sanatoria had per diem expenses of \$16.95 and \$30.77, respectively (Table 13).

Provincially, public general hospitals in Prince Edward Island had the lowest cost per patient-day at \$34.46 and Quebec had the highest at \$59.89. The per capita cost of operating and maintaining all public hospitals increased by 134.7 p.c. during the period 1961-69, rising from \$47.46 to \$111.37.

**Subsection 2.—Morbidity, Notifiable Diseases and Other Health Statistics\***

**Morbidity.**—A growing need for additional information on illness in Canada was met in part by a statistical program first undertaken for 1960 involving separations (discharges and deaths) from the general and allied special hospitals. The program provided data on primary diagnosis, days of care, length of illness and age composition for all hospital patients except those in mental hospitals and tuberculosis sanatoria. (Age, sex and diagnostic information on persons treated in mental hospitals and in tuberculosis sanatoria has been available at the national level for many years but no similar information has been available for persons treated in the other kinds of hospitals.) About 100 out of every 1,000 persons

\* Prepared in the Public Health Section, Health and Welfare Division, Statistics Canada.

are hospitalized during a year and, of these, 96 or 97 are treated in general and allied special hospitals. The 1968 data were the latest available at the time of preparation of this Subsection.

It should be noted that the picture of morbidity provided by these statistics is not, of course, complete. A total morbidity picture would include not only the morbidity covered by in-patient hospital care but also out-patient morbidity, morbidity covered by treatment outside the hospitals, and morbidity for which no treatment is received. Nevertheless, the illnesses that receive hospital care are, in general, more serious and more important than the illnesses that do not receive hospital care and this, together with the fact that the diagnostic quality of hospital morbidity statistics is very high, makes hospital morbidity statistics a most important source of information. Tables 15 and 16 present, for 1968, adult and child patients (excluding newborn) in terms of 17 diagnostic categories (Canadian) which consolidate the much more detailed international classification of diseases.

**15.—Hospital Separations, Separations and Days per 100,000 Population, and Average Days of Stay, by Diagnostic Category, 1968**

(Excluding newborn and data for the Yukon and Northwest Territories)

Diagnostic Category <sup>1</sup>	Separations	Separations per 100,000 Population	Days per 100,000 Population	Average Days of Stay

<sup>1</sup> Includes newborn cases and cases under one year of age.

**Notifiable Diseases.**—The notifiable diseases most predominant in 1970, as in 1969, were venereal diseases (34,048 cases), measles (25,137 cases), rubella (12,710 cases), infectious and serum hepatitis (12,295 cases), and streptococcal sore throat and scarlet fever (10,422 cases). Table 19 shows the number of notifications and the rates per 100,000 of all notifiable diseases, by province, in that year.

*Tuberculosis.*—There were 3,920 new active and 620 reactivated cases of tuberculosis reported in Canada in 1970—a total of 4,540 cases. Of 10,716 tuberculosis patients being treated at the end of 1970, 2,012 were hospital patients and 8,704 were being treated by drugs on an out-patient basis. In addition, there were 10,139 persons receiving preventive out-patient drug therapy as a safeguard against their developing active forms of the disease. Table 20 gives summary information relating to this disease.

## 20.—Summary Statistics on the Incidence of Tuberculosis, 1970—concluded

Province, Age Group and Origin	Notifications		Patients under Treatment at Dec. 31			Persons Receiving Preventive Out-patient Drug Treatment, Dec. 31	Deaths
	New Active Cases	Re- activated Cases	In- patients	Out- patients	Total		
Origin <sup>1</sup>	NUMBERS						
Indians.....	462	69	259	907	1,166	808	..
Eskimos.....	105	25	36	281	317	384	..
Others.....	3,353	526	1,717	7,516	9,233	8,947	..
	PERCENTAGE DISTRIBUTION						
Indians.....	12	11	13	11	11	8	..
Eskimos.....	3	4	2	3	3	4	..
Others.....	85	85	85	86	86	88	..

<sup>1</sup> This classification is shown to point up the high incidence of tuberculosis among the native populations; Indians constituted 1.1 p.c of the total population in 1961 and Eskimos 0.1 p.c.

**Cancer.**—Statistics Canada started a national cancer incidence reporting system on Jan. 1, 1969, in co-operation with the National Cancer Institute and the nine existing provincial tumour registries; a registry has not yet been organized in Ontario. Participating provinces send a simple notification card with basic patient and diagnostic information for each new primary site of malignant neoplasm discovered. Results of the first year's operation of the reporting system are given in Table 21.

**Therapeutic Abortions.**—Therapeutic abortions performed in Canada in the first six months of 1971 totalled 14,188, according to reports to Statistics Canada by hospital authorities in all ten provinces and Yukon Territory; this was 3,036 more than the 11,152

therapeutic abortions reported for the full calendar year 1970. Patients with Canadian residence accounted for all but 20 of the 14,188 abortions in the 1971 six-month period, and in terms of rates per 100 live births the abortions for Canadian residents amounted to 7.6 p.c. of the live births (3 p.c. for the year 1970). Provincial rates varied from about 19 p.c. for British Columbia to about 11 p.c. for Ontario, 10 p.c. for Alberta, 4 p.c. for Saskatchewan, Manitoba and Nova Scotia, and less than 2 p.c. for Quebec, New Brunswick, Prince Edward Island and Newfoundland.

<sup>2</sup> Based on estimates of 1969 births.

### Subsection 3.—Numbers of Physicians and Earnings of Those in Private Practice

In December 1970 there were 31,166 active civilian physicians in Canada. Well over one third of them (11,851) were located in Ontario. British Columbia had the lowest population/physician ratio (627), followed by Ontario (654) and Quebec (682). The national average at December 1970 was 692 persons per physician.

Table 23 gives the provincial distribution and population/physician ratios for 1970 and also shows the trend in the national total since 1911. The figures include all junior and senior interns and residents and physicians engaged in administration, teaching, research, etc., within the medical field, as well as those in the clinical practice of medicine.

**23.—Physicians and Population per Physician, 1911-70, and by Province, 1970**

<sup>1</sup> As at June 1; Yukon and Northwest Territories included from 1961 on.

<sup>2</sup> As at Dec. 31; estimates for 1962 to 1968 for interns and residents are based on Statistics Canada data and those for other active civilian physicians are based on data contained in *List Catalogue*, Canadian Mailings Limited (Seccombe House).

<sup>3</sup> Compiled by the Department of National Health and Welfare from information supplied by Medical Marketing Systems Limited (Seccombe House).

**Earnings.**—The average gross professional earnings of fee-practising physicians in 1969 were \$46,328, which was 8.3 p.c. higher than in 1968 and 79.1 p.c. higher than in 1961. The highest average gross earnings in 1969 were reported in Alberta, at \$52,383. In Ontario, Manitoba and Newfoundland they were above the national average and in the remaining provinces they ranged from \$45,010 in Saskatchewan to \$34,595 in the Yukon and Northwest Territories. Generally, throughout the nine-year period 1961-69, average gross earnings have been at a higher level in Newfoundland, Ontario and the western provinces than in Quebec and the Maritime Provinces.

The net returns to physicians, after deduction of the expenses of professional fee practice, reveal similar geographic patterns, as shown in Table 24. Net earnings for Canada as a whole averaged \$30,861 in 1969, 7.9 p.c. higher than in 1968 and 87.4 p.c. above the 1961 figure. The highest provincial average net income was reported by Newfoundland physicians at \$37,817, followed by Ontario physicians at \$33,903; the lowest average net income, \$15,807, was reported by the Yukon and Northwest Territories.

<sup>1</sup> Includes wages and salaries for professional services.

<sup>2</sup> Excludes physicians employed on a salaried basis under the Cottage Hospital Medical Service and by subsidized voluntary prepayment plans. The estimated number of such excluded physicians in 1969 was 109.

<sup>3</sup> Excludes some physicians employed on a salaried basis in private group-practice. The estimated number of such excluded physicians in 1969 was 65.

<sup>4</sup> Data to 1968 for the Yukon and Northwest Territories are posted for record only.

<sup>5</sup> Includes net professional fees after deducting expenses of practice, and wages and salaries incidental to fee practice.

## PART II.—WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income maintenance measures such as the Canada Pension Plan, old age security pensions, the guaranteed income supplement program, family allowances, youth allowances and unemployment insurance, where nation-wide co-ordination is required, are administered federally. The Federal Government gives substantial aid to the provinces in meeting the costs of public assistance and also provides services for special groups such as veterans, Indians, Eskimos and immigrants. The Department of National Health and Welfare is generally responsible for federal welfare matters, although the Departments of Veterans Affairs, Indian Affairs and Northern Development, and Manpower and Immigration operate programs for specific groups.

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Co-ordination in welfare matters between different levels of government has expanded considerably in recent years and in various ways. These include meetings of ministers, deputy ministers and other officials concerned with the development of programs and administrative arrangements. The agreements that have been reached provide, among other things, for the exchange of statistical and other information between the two levels of government and for the provision, at the request of the provinces, of a variety of consultative services. The three federal-provincial task forces appointed by the federal-provincial meeting of welfare ministers in January 1969 submitted their reports in January 1971.

A channel of communication between citizens groups and the Department of National Health and Welfare is provided by the National Council of Welfare. As reconstituted in January 1970, the Council now consists of 21 private citizens about half of whom have been selected from organizations of consumers of welfare services and the remainder from institutions involved, directly or indirectly, in providing welfare services. The Council is responsible for advising the Minister of National Health and Welfare on such matters related to welfare as it deems appropriate as well as to consider matters referred to it by the Minister.

## Section 1.—Federal Government Programs

### Subsection 1.—Canada Pension Plan

The Act establishing the Canada Pension Plan received Royal Assent on Apr. 3, 1965 and was proclaimed in force on May 5 of the same year. Collection of contributions commenced in January 1966, and in January 1967 the first benefits were paid in the form of retirement pensions. In February 1968, the first survivors' benefits were paid, and in February 1970 the first disability benefits were paid. The Plan enables millions of people to make financial provision for their retirement and to protect themselves and their dependants or survivors against loss of income in the event of their disability or death.

The Plan is universally applicable throughout Canada, except in the Province of Quebec where a comparable pension plan has been established. The Canada and Quebec Pension Plans, however, are closely co-ordinated and operate virtually as a single program. Together, they cover almost all members of the labour force in Canada. Benefit credits accrued under the Canada or Quebec Plans are portable throughout Canada. A contributor who may have worked for more than one employer during his lifetime or who may be self-employed for all or part of his working life will accumulate pension credits regardless of where he may work in Canada. Benefits under the Plan are payable to beneficiaries whether or not they live in Canada. Every contributor must have a social insurance number so that his pensionable earnings may be accurately recorded for benefit purposes.

The maximum pensionable earnings for a year were \$5,000 for both 1966 and 1967, \$5,100 for 1968, \$5,200 for 1969, \$5,300 for 1970 and \$5,400 for 1971. From 1972 to 1975, the figure of \$5,400 will be adjusted in line with changes in the Pension Index which, in turn, is based on the Consumer Price Index. Beginning in 1976, the maximum pensionable earnings for a year will be adjusted in accordance with changes in the Earnings Index to reflect changes in average wage and salary levels in Canada.

To participate in the Plan, a person must be between the ages of 18 and 70 and earn more than \$600 yearly as an employee, or at least \$800 if he is self-employed. In 1971, contributions are made on earnings between \$600 and \$5,400 a year in the case of both employees and self-employed persons. Employees contribute at the rate of 1.8 p.c. and a matching contribution is made by their employers; self-employed persons contribute at the rate of 3.6 p.c. No contributions are to be made by persons while they are receiving disability pensions. Although contributions are made on annual earnings between \$600 and the maxima referred to above, rates of benefit are calculated on total earnings up to that maximum. That is, while contributions are not paid on the first \$600 of annual earnings, that amount is nevertheless included in the calculation of benefits.

The earnings-related component of the benefit which a person is entitled to receive under the Canada Pension Plan is based on the contributor's average pensionable earnings. Before this average is calculated, however, all earnings are adjusted in line with the average of the maxima on pensionable earnings during the benefit year and the two preceding years. Thus, when a benefit first becomes payable, the earnings on which it is based are related to the maximum on pensionable earnings at that time rather than when the earnings were received.

Benefits are classified under three main headings: Retirement Pensions; Survivors' Benefits, consisting of a widow's pension, a disabled widower's pension, orphans' benefits, and a lump-sum death benefit; and Disability Benefits comprising pensions for disabled contributors and benefits for their dependent children.

From 1970 on, *Retirement Pensions* became payable to contributors who are 65 years of age or over provided that, if under age 70, they are retired from regular employment. For contributors who have reached age 70, retirement pensions are payable regardless of whether or not they are retired. They become payable at their full rate beginning in January 1976. This rate amounts to 25 p.c. of what the updated pensionable earnings of contributors have averaged since Jan. 1, 1966, or from age 18, whichever comes later.

Contributors who become eligible for retirement pensions prior to 1976 receive reduced amounts. In the calculation of retirement pensions that commence during this period, pensionable earnings are averaged over ten years or 120 months. The only exception occurs where a disability pension has been paid, in which case the time during which that pension was in pay is deducted from the ten years and the remaining period used for averaging purposes. In the calculation of retirement pensions that commence after 1975, provision is made to assist the contributor who may have had periods of low or no earnings during his contributory period. This is accomplished by dropping out the number of months during which contributions may have been made after age 65, either by using the pensionable earnings in those months in place of earlier periods of lesser or no earnings, or by dropping such pensionable earnings out of the calculation if they are less favourable to him. Also dropped out of the calculation are up to 15 p.c. of the number of months he could have contributed before age 65 and the earnings in an equal number of months, although the drop-out must not reduce the number of months for averaging purposes to fewer than 120.

A person under 70 years of age who is in receipt of a retirement pension must meet an earnings test. In 1971, the maximum annual remuneration from employment he may earn without affecting the amount of his pension is \$960. Should his yearly earnings exceed this figure, his pension is reduced as follows. When annual employment earnings are between \$960 and \$1,600, the reduction will equal 50 p.c. of the amount over \$960, or an amount of up to \$320 per year; if earnings exceed \$1,600, the amount deducted will be \$320 plus the actual amount earned over \$1,600. However, the amount of pension is not subject to reduction for any month in which the pensioner does not earn over \$80. At age 70, a contributor is entitled to receive the full amount of his retirement pension regardless of the amount of his earnings.

*Survivors' Benefits* became payable in February 1968. They are paid to or on behalf of the survivors of a deceased contributor who has made contributions for the present minimum qualifying period of three years for those whose benefits commence before 1975.

A woman who is widowed between ages 45 and 65 is entitled to a widow's pension consisting of the flat-rate payment plus  $37\frac{1}{2}$  p.c. of her husband's retirement pension. The flat-rate component is equal to \$25 multiplied by the ratio of the Pension Index for the year in which the contributor dies to the Pension Index for 1967. Thus, for 1971, the flat-rate component is \$27.06. Should her husband not be in receipt of a retirement pension at the time of his death, such a pension is calculated in prescribed manner for the purposes of computing the amount of the widow's pension. If a woman is widowed under age 45, the same pension is paid provided she has dependent or disabled children or is

herself disabled. If she does not meet any of these requirements, her pension is reduced by an amount equal to  $1/120$  for each month she is less than age 45 at the time of her husband's death. Accordingly, if a woman is widowed at age 35 or less, and has no dependent or disabled children and is not herself disabled, she will not receive a widow's pension until she reaches 65 years of age, unless she becomes disabled in the meantime.

A widow aged 65 or over receives a widow's pension equal to 60 p.c. of her husband's retirement pension, regardless of her age at the time her husband died or whether she was receiving a widow's pension before she became 65. Again, if her husband was not in receipt of a retirement pension at the time of his death, one is calculated in prescribed manner in order to compute the amount of the widow's pension. Women who receive widow's pensions may also have contributed to the Canada Pension Plan themselves and consequently may be entitled to retirement or disability pensions in their own right. In such cases, the widow's pension will be combined with the other pension, in accordance with a prescribed formula, but the combined total cannot exceed the maximum retirement pension payable under the Act.

Orphans' benefits are payable on behalf of a deceased contributor's unmarried dependent children. The rate for each of the first four children is equal to the flat-rate component of the widow's pension (\$27.06 for 1971); for more than four children the total benefit, which is divided equally among the children, is the sum of \$27.06 for each of four, and half of that amount for each child in excess of four. Benefits are payable until the child reaches age 18 or up to age 25 if he continues to attend school or university full time.

A disabled widower's pension is payable to a disabled widower if he was wholly or substantially dependent on his wife for financial support at the time of her death. The test of disability is the same as that for a person who claims a disability pension and the pension formula is the same as that for a widow age 45 or more.

When a contributor dies, a lump-sum death benefit equal to six times his monthly retirement pension is paid to his estate. This benefit is subject to a maximum of 10 p.c. of the maximum on pensionable earnings which, for 1971, would mean a payment not exceeding \$540. Should a contributor not be in receipt of a retirement pension at the time of his death, a calculation is made in prescribed manner for purposes of establishing the amount of the death benefit.

*Disability Pensions* became payable in 1970. A contributor is considered to be disabled if he has a physical or mental disability that is so severe and likely to continue so long that he is incapable regularly of pursuing any substantially gainful occupation. Disability pensions, plus benefits for the dependent children of disabled contributors, are available provided contributions have been made to the Plan for the present minimum qualifying period of five years. The amount of the pension consists of a flat-rate payment equal to the flat-rate component of a widow's pension plus 75 p.c. of what the contributor's monthly retirement pension would have been had he reached age 65 when his disability pension commenced. Benefits are payable on behalf of a disabled contributor's dependent children at the same rates and under essentially the same circumstances as the orphans' benefits.

All monthly benefits are adjusted upward annually if changes in the Pension Index warrant it. Benefits in payment in 1967 were increased by 2 p.c. effective January 1968, those in payment in 1968 were increased by 2 p.c. effective January 1969, those in payment in 1969 were increased by 2 p.c. effective January 1970, and those in payment in 1970 were increased by 2 p.c. effective January 1971.

Any contributor or beneficiary under the Plan has the right to appeal decisions with which he is dissatisfied. Appeals by employees and employers regarding coverage and contributions are first made to the Minister of National Revenue and, if the individual is not satisfied with the Minister's decision, he may appeal to the Pension Appeals Board whose decision is final. For self-employed persons, appeals with reference to the assessment of their earnings for Canada Pension Plan purposes are treated in the same way as

appeals under the Income Tax Act. With respect to benefits, there is a three-stage appeal procedure: first, to the Minister of National Health and Welfare; secondly, to a Review Committee; and thirdly, to the Pension Appeals Board whose decision is final.

The legislation provides for the investment of the funds that accrue from monthly contributions, less the estimated amounts required to pay benefits and administrative costs over a three-month period. These funds are made available to each province on the basis of the relationship between the contributions made to the Plan by and on behalf of residents of that province and the total contributions made to the Plan. Funds not borrowed by the provinces are invested in federal securities. The Canada Pension Plan is entirely self-supporting in that all benefits and all costs incurred in the administration of the program are financed solely from the contributions made by employees, employers and self-employed persons and the interest earned from the investment of funds.

An Advisory Committee representing employers, employees, self-employed persons and the public, which was established in 1967, reviews from time to time the operations of the Plan, the state of the investment fund and the adequacy of coverage and benefits, and reports to the Minister of National Health and Welfare. In addition, a report on its activities is included in the annual report on the Plan. The legislation authorizes arrangements to be made with other countries to achieve as full coverage of persons in the labour force in Canada as is possible and to ensure the portability of pension credits between Canada and the countries concerned.

The Minister of National Health and Welfare is responsible for the administration of all parts of the program except coverage and the collection of contributions which come under the jurisdiction of the Minister of National Revenue. The Unemployment Insurance Commission is responsible for the assignment of social insurance numbers and for the maintenance of the Central Index. The Department of Finance is responsible for the administration of the Canada Pension Plan Account and the Canada Pension Plan Investment Fund. The Department of Supply and Services gives assistance to the Department of National Health and Welfare in the operation of the electronic data processing service which is required to maintain the records of earnings of contributors and to calculate benefits payable under the Plan. The Chief Actuary, Department of Insurance, is responsible for the preparation of reports on the future financial progress of the Plan and on the effect on the Fund of proposed amendments to the Plan.

The Canada Pension Plan Administration of the Department of National Health and Welfare consists of a head office establishment in Ottawa, a network of 38 district offices located in the major population centres in Canada outside the Province of Quebec, and 104 local offices, the latter on a part-time basis.

## Subsection 2.—Old Age Security and Guaranteed Income Supplement

**Old Age Security.**—Under the Old Age Security Act of 1951, as amended, the Federal Government pays a monthly pension to all persons aged 65 or over who meet the necessary residence qualifications. Until 1966 the pension was payable to those aged 70 or over but an annual one-year reduction in pensionable age from 70 to 65 was completed in 1970. Prior to 1968 the pension amounted to \$75 a month but in 1968, 1969 and 1970, the amount was adjusted in line with changes in the Pension Index developed for the Canada Pension

Plan (see p. 338); it reached \$79.58 a month in 1970. An amendment to the Act, passed in December 1970, set the basic pension at a flat \$80 a month, as from January 1971. However, for pensioners in receipt of the guaranteed income supplement (see below), the old age security pension together with the supplement will be subject to annual escalation ranging from 1 p.c. to a maximum of 2 p.c. to reflect price rises.

The old age security pension is payable to a person of attained age who has resided in Canada for ten years immediately preceding the approval of his application for the pension. Any gaps in the ten-year period may be offset if the applicant had been present in Canada in earlier years for periods of time after reaching age 18 equal in total to three times the length of the gaps; in this case, however, the applicant must also have resided in Canada for one year immediately before the month in which his application for pension may be approved. The pension is also payable to persons of attained age who have left Canada before reaching that age but who have had 40 years of residence in Canada since age 18. A pensioner may absent himself from Canada and continue to receive payments. If he has lived in Canada for 25 years since his 21st birthday, payment outside of Canada may continue indefinitely; if not, payment is continued for six months, in addition to the month of departure, and is then suspended, to be resumed only with the month in which he returns to Canada.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital, to which application is made for pension. The regional office in Edmonton administers accounts for and receives applications from residents of the Yukon and the Northwest Territories. The old age security plan is financed through a 3-p.c. sales tax, a 3-p.c. tax on corporation income and, subject to a limit of \$240 a year, a 4-p.c. tax on taxable personal income. The revenues from these sources are paid into a separate fund called the Old Age Security Fund, from which are paid the old age security pensions and, from Jan. 1, 1967, benefits under the guaranteed income supplement program.

**Guaranteed Income Supplement.**—A 1966 amendment to the Old Age Security Act provides for the payment of a monthly guaranteed income supplement to old age security pensioners who have little or no income other than the pension. The program commenced on Jan. 1, 1967. Beginning at that date, the maximum supplement was \$30 a month; after 1967, it was 40 p.c. of the amount of the old age security pension. With the latter pension being escalated in 1968, 1969 and 1970, the maximum supplement reached \$31.83 a month in 1970. An amendment passed in December 1970 raised the maximum monthly supplement to \$55 for a single pensioner and to \$95 for a married couple, both of whom are pensioners. Thus, the old age security pension and guaranteed income supplement comprise a guaranteed annual income of \$1,620 for a single person and \$3,060 for a married couple when both are pensioners. In future years, the guaranteed income supplement together with the old age security pension paid to those recipients may be escalated from 1 p.c. to 2 p.c. based on increases in the cost of living.

Pensioners with income in addition to their old age security pension may receive partial benefits. The maximum supplement is reduced by \$1 a month for every full \$2 a month of income over and above the old age security pension and any supplement that may have been received. Income for this purpose is the same as that computed in accordance with the Income Tax Act. In the case of a married couple, each is considered to have one half of their combined income. Where one spouse will not be receiving an old age security pension at any time in the current year, six times the amount of the monthly old age security pension is deducted from one half of the combined income in calculating the income of the pensioner for guaranteed income supplement purposes.

Payments will not be made to married couples unless both spouses submit returns. However, in order to prevent undue hardship when no statement of income is obtainable from one spouse, the other, in certain circumstances, may be deemed to be single for purposes of determining income. Furthermore, although marital status is determined as at Mar. 31

of the year preceding the benefit year, even if this status should change in the benefit year, a special provision allows a person to be deemed either married or single in the preceding year.

If a pensioner who is in receipt of a supplement leaves Canada, the supplement will be paid for the month of departure and for six further months. Payment will then be discontinued until his return.

The guaranteed income supplement program is administered in conjunction with the old age security pension program. An application for the supplement is sent to each person when he begins to receive the old age security pension and subsequently at the beginning of each calendar year. Entitlement is re-assessed each year on the basis of the pensioner's income in the preceding year.

## Subsection 3.—Family Allowances

The Family Allowances Act of 1944 assists in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under age 16 who was born in Canada, or who has been a resident of the country for one year, or whose father or mother has been domiciled in Canada from a date three years immediately prior to the date of birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under 10 years of age and \$8 for each child age 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school attendance legislation, who ceases to be maintained by a parent or who ceases to be a resident of Canada, or on behalf of a girl who is married and under age 16.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. The Regional Director located at Edmonton also administers the accounts of residents in the Yukon Territory and Northwest Territories.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is payable monthly for the first year of the child's residence in Canada, is intended to bridge the gap until the child becomes eligible for family allowances. The eligibility requirements, other than that relating to residence, are the same for family assistance as for family allowances.

The Province of Quebec introduced its own family allowances program, supplementing the federal scheme, under legislation enacted in 1967 (see p. 354), and Newfoundland in 1966 introduced a program called the Parents' Supplement (Schooling Allowance), under which payments are made for children attending school (see p. 354).

### Subsection 4.—Youth Allowances

Legislation providing for a program of youth allowances became effective Sept. 1, 1964. The Federal Government does not provide youth allowances in Quebec, which has had its own program, called Schooling Allowances, since 1961. With the introduction of the federal scheme, Quebec agreed to make certain changes in its schooling allowances program so that it would be comparable to the federal measure; since then, that province has been compensated by a tax abatement adjusted to equal the amount that the Federal Government would otherwise have paid in allowances to Quebec residents. The federal youth allowances and the Quebec schooling allowances programs cover all eligible young people in Canada.

Under the federal program, monthly allowances of \$10 are payable in respect of all dependent children aged 16 and 17 who are receiving full-time educational training or are precluded from doing so by reason of physical or mental infirmity. Both the parent or guardian and the child must normally be physically present and living in a province other than Quebec. The allowance is not payable to a parent who resides in Quebec or outside Canada, regardless of where his child may be attending school. However, a child may attend school in Quebec or outside Canada, or, if disabled, receive care or training in Quebec or outside Canada and still be considered eligible, on the basis that he is a resident of a province other than Quebec but is temporarily absent.

Allowances normally commence with the month following that in which family allowances cease and continue until the school year terminates. They are paid retroactively for the summer months when the child returns to school at the commencement of the new school year, although allowances for a disabled child not attending school are payable continuously throughout the year. Should a student leave school, leave the country permanently, cease to be maintained, take up residence in Quebec, or die, the allowance ceases. Otherwise, the youth allowance continues until the end of the month in which the young person reaches age 18. Youth allowances are considered not to be income for any purpose of the Income Tax Act.

The program is administered by the Department of National Health and Welfare. The national director of the family allowances and old age security programs is also responsible for administering youth allowances, assisted by regional directors located in each of the provincial capitals other than Quebec City. The costs of youth allowances are met from the Consolidated Revenue Fund.

### **Subsection 5.—International Welfare**

Canada is actively involved in the social development activities of the United Nations and its specialized agencies and of various other international organizations. At the United Nations, Canada is represented on the Commission for Social Development, and is a member of the Executive Board of the United Nations Children's Fund. The Canadian Government, together with provincial governments and agencies, participates actively in the work of the International Council on Social Welfare, the International Social Security Association, and other international agencies concerned with the social aspects of development.

The Department of National Health and Welfare, through the programs of the Canadian International Development Agency, supports a number of social development projects in developing countries, provides advisers for service abroad, and arranges social development training for foreign students recommended by their governments. The Department, which works closely with several Canadian voluntary organizations engaged in social development, also supplies the necessary technical services to the bilateral and multilateral aid programs in this sector.

Canada is in the course of negotiating reciprocal social security agreements with a number of European countries. Canadian agencies employed in social security participate in the program of the International Social Security Association and the social security program of the International Labour Organization. For some years, Canada has been represented, as an observer, at the meetings of the Inter-American Social Security Association.

## **Section 2.—Federal-Provincial Programs**

### **Subsection 1.—Canada Assistance Plan**

The Canada Assistance Plan was enacted in 1966 as a comprehensive public assistance measure to complement other income security measures. It provides, under agreements with the provinces, for federal contributions of 50 p.c. of the costs of assistance to persons in need and of the costs of certain welfare services. The plan has largely replaced the Unemployment Assistance Act, 1956, although the latter continues in effect in some provinces for an interim period with respect to certain programs that utilize a means test, that are being phased out but that are not covered under the Canada Assistance Plan. All provinces had signed agreements under the plan by the end of August 1967, and the Yukon Territory signed in December 1969. The arrangements for contracting out of certain shared-cost programs that were introduced in 1965 under the Established Programs (Interim Arrangements) Act are applied to Quebec's agreement. It is provided that the provinces may discontinue their programs of blind persons allowances and disabled persons allowances and instead give aid under their general programs with costs shared under the plan.

The plan extends federal sharing to include the following costs, which were not shared under the Unemployment Assistance Act: assistance to needy mothers with dependent children, maintenance of children in the care of provincially approved child welfare agencies, health care services to needy persons, and the extension of welfare services to prevent or remove causes of dependency or to assist recipients in achieving self-support. The only eligibility requirement specified is that of need, which is determined through an assessment of budgetary requirements as well as of income and resources. A province must not require previous residence as a condition of eligibility for assistance or for continued assistance; rates of assistance and eligibility requirements are set by the province so that they may be adjusted to local conditions and the needs of special groups; and the provinces must establish procedures for appeal from decisions that relate to the provision of assistance.

The Federal Government reimburses the provinces for 50 p.c. of the cost of assistance provided to persons in need and for 50 p.c. of certain costs of improving or extending welfare services. "Assistance" includes any form of aid to or on behalf of persons in need for the

purpose of providing basic requirements such as food, shelter and clothing; items necessary for the safety, well-being or rehabilitation of a person in need, or for a handicapped person; care in homes for special care such as a home for the aged, a nursing home or a welfare institution for children; travel and transportation; funerals and burials; health care services; welfare services purchased by or at the request of provincially approved agencies; and comfort allowances for inmates of institutions.

The cost of improving and extending welfare services may be calculated either (1) as the amount by which the cost of providing welfare services exceeds that of the period from Apr. 1, 1964 to Mar. 31, 1965 or (2) as the cost of employing persons who are engaged wholly or mainly in the performance of welfare service functions and who are employed in positions filled after Mar. 31, 1965. Included for sharable purposes are the costs of salaries and employee benefits, travel, research, consultation, fees for conferences and seminars, and certain costs of staff training. The sharing of cost of work activity projects that prepare persons for employment and the extension of provincial welfare services to Indians on reserves, on Crown lands or in unorganized territory are governed by special agreements.

The federal share of costs under the Unemployment Assistance Act amounted to \$14,100,000 during the year ended Mar. 31, 1971. This amount includes \$13,300,000 to Quebec under the Established Programs (Interim Arrangements) Act.

#### 8.—Federal Share of Canada Assistance Plan Costs, by Province, Years Ended Mar. 31, 1970 and 1971

NOTE.—Includes costs of public assistance payments, child welfare maintenance, health care and extensions and improvements in welfare services and also payments made for claims received during the fiscal year for expenditures made in the previous fiscal year.

<sup>1</sup> Compensation is made to Quebec under the terms of the Established Programs (Interim Arrangements) Act. Payments in 1969-70 and 1970-71 amounted to \$156,600,000 and \$203,300,000, respectively.

#### Subsection 2.—Blind and Disabled Persons Allowances

Federal reimbursement to the provinces for assistance to blind persons and persons permanently and totally disabled, aged 18 or over, is provided for under the Blind Persons Act, 1951, as amended, and the Disabled Persons Act, 1954, as amended. To be eligible for an allowance under either of these Acts, an applicant must meet the 10-year residence requirement and the income requirements. Total income, including the allowance, may not exceed \$1,260 a year for an unmarried person, \$2,220 a year for a married couple or \$2,580 a year for a married couple when the spouse is blind within the meaning of the Blind Persons Act. Under the Blind Persons Act, total income, including the allowance, may not exceed \$1,500 a year for an unmarried person, \$1,980 a year for a person with no spouse but with one or more dependent children, \$2,580 a year for a married couple and \$2,700 a year for a married couple when the spouse is also blind.

The federal contribution is 50 p.c. of \$75 a month or the allowance paid, whichever is less, for disabled persons allowances, and 75 p.c. of \$75 a month or the allowance paid, whichever is less, for blind persons allowances.

Effective Apr. 1, 1965, Quebec received payment under the terms of the Established Programs (Interim Arrangements) Act.

Under the terms of the Canada Assistance Plan, a province may elect to aid needy persons in these categories under a general assistance program with costs shared under the plan (see p. 347). By mid-1971, Newfoundland, Prince Edward Island, Nova Scotia, Quebec, Ontario, Saskatchewan and Alberta had discontinued receipt of applications for disabled persons allowances, and four of these—Quebec, Ontario, Saskatchewan and Alberta—had also discontinued receipt of applications for blind persons allowances.

<sup>1</sup> Excludes Quebec. Effective Jan. 1, 1965 no payments were made to Quebec under these programs; instead, compensation was provided under the Established Programs (Interim Arrangements) Act. If payments had been made under these programs, however, total amounts for 1969-70 would have been increased as follows: allowances for the blind—\$1,442,995; and allowances for disabled persons—\$7,492,756. Data for 1970-71 not available.

**Subsection 3.—Fitness and Amateur Sport Program**

The Fitness and Amateur Sport Program was inaugurated in 1961 to increase the number of participants at all levels of competitive and non-competitive physical recreation and amateur sport activity ranging from day camps to the Canada Games and the Olympic Games; to help provide the participants with the skills, the means and the opportunity to benefit from recreation; and to help make available to all citizens the facilities and leadership to participate freely in recreational activities of their choice. These objectives are predicated on the assumption that every Canadian should develop a level of fitness sufficient to contribute positively to his physical and mental health and that Canadian athletes should develop a level of performance in national and international competitions which will contribute to national unity and international prestige.

Under the Fitness and Amateur Sport Act, 1961, up to \$5,000,000 a year may be expended to encourage, promote and develop fitness and amateur sport in Canada. A

National Advisory Council on Fitness and Amateur Sport, consisting of not more than 30 members appointed by the Governor in Council with at least one from each province, has been set up to consider problems connected with such activity and to advise the Minister of National Health and Welfare thereon.

After consideration of the report of the Task Force on Sports for Canadians, the findings of the Montmorency Conference on Leisure, the recommendations made by the National Advisory Council on Fitness and Amateur Sport, and the conclusions of an internal departmental study, the Minister proposed, in March 1970, a new government sports policy for Canadians. Advocating the benefits of mass participation and the inculcation of sports and recreation into the Canadian culture, the policy aims primarily at reinforcing and increasing the administrative strength of Canadian sports and recreation agencies by providing them with administrative, financial and other professional assistance. The Department operates certain projects of its own and also provides grants for specific projects, all intended to facilitate the development of resources and motivate participation by all Canadians.

The federal program for 1970-71 concentrates on (1) grants and support to national fitness and sport organizations to improve the standards of administration, coaching and instruction, to increase the rate of participation in physical recreation and to provide aid to the holding of competitions (\$2,000,000); (2) promotion and support of special projects including the Arctic Games, the Canada Games and the Canada Fitness Award, and assistance in the holding of sports events of nation-wide interest (\$1,400,000); (3) planning, training, research and communications in support of increased participation in physical recreation by all Canadians.

#### Subsection 4.—National Welfare Grant Program

The National Welfare Grant Program was established in 1962 to help develop and strengthen welfare services in Canada. Under the program project grants are provided to provincial and municipal welfare departments, non-governmental welfare agencies, citizen organizations and universities. Fellowships are provided to individuals seeking advanced training in social work. The variety of provisions within the program along with its associated consultative services allows it to operate as a flexible instrument in the development of welfare services and to give major emphasis to experimental activities in the welfare field. The allotment for the year ended Mar. 31, 1971 was \$2,500,000.

General welfare bursary training and staff development grants are available to provinces on a shared-cost basis, with the other provisions of the program being administered and financed entirely by the Federal Government. Demonstration, research and social action projects in a wide range of subject areas are eligible for grants, as are developmental projects related to welfare manpower. Fellowships are available for study at Canadian and foreign universities and grants are available to assist Canadian schools of social work with teaching and field instruction costs.

With the advent of the Canada Assistance Plan, increasing attention has been given to experimental activities under the National Welfare Grants program to encourage innovative approaches to the solution of social problems and the provision of welfare services.

Effective Apr. 1, 1967, a mental retardation grant was established for a five-year period, a portion of which is administered in conjunction with the National Welfare Grant program. Support is extended to research and demonstration projects designed to expand knowledge and to apply that knowledge to the provision of services and to preventive programs in that field.

Expenditures under the National Welfare Grant program for the year ended Mar. 31, 1971 totalled \$2,443,551, and under the Mental Retardation Grant \$225,717. Of the former, \$1,100,217 was expended on demonstration projects, \$394,364 on research projects,

\$387,835 on teaching and field instruction, \$66,816 on scholarships, \$89,102 on fellowships, \$235,136 on national agency projects and \$170,081 on general welfare projects including the provincially administered bursary and staff development programs.

recipients.

**Subsection 5.—Vocational Rehabilitation**

The federal-provincial vocational rehabilitation program, which began in 1952, was consolidated and extended under the Vocational Rehabilitation of Disabled Persons Act, 1961. Agreements under this Act provide for equal sharing of costs between the Federal Government and the provinces or territories. These costs include co-ordination and provision of services to disabled or other vocationally disadvantaged individuals, training of rehabilitation personnel, and research and publicity. Approved services supplied by a provincial government or purchased from voluntary agencies by a provincial government include medical, social and vocational assessment, intensive counselling, restorative services, the provision of prostheses, vocational or educational upgrading, rehabilitation allowances, work conditioning, and provision of tools, books and other equipment. Employment counselling and placement are provided through the Canada Manpower Centres of the Department of Manpower and Immigration or by the voluntary agencies from which services are purchased.

In each participating province, a provincial co-ordinator or director of rehabilitation is responsible for the co-ordination and administration of services to disabled or vocationally disadvantaged persons. The federal aspects of the program are administered by the

Manpower Utilization Branch of the Department of Manpower and Immigration in co-operation with the Department's five regional offices. The Manpower Utilization Branch through its Special Groups Division also has responsibility for the development of services for other persons suffering occupational disadvantages. The Division has the function of encouraging a more favourable employment climate for older workers through a continuing educational program, encouragement of research, maintenance of liaison with management, labour and voluntary agencies, assembly and dissemination of informational material concerning industrial gerontology, and supportive services to the Canada Manpower Centres. The Department of Manpower and Immigration is co-operating with other federal departments in the study of the needs of occupationally disadvantaged groups for special programs. The Department is also co-operating with the Department of Indian Affairs and Northern Development regarding improvements in employment and training services for Indians, Eskimos and metis. Other persons suffering occupational disadvantages, such as inmates and former inmates of correctional institutions and adults with limited job prospects, are given special assistance by the Department which is also studying new ways to help such persons obtain productive and satisfying employment. Among other agencies contributing to vocational rehabilitation are the workmen's compensation boards in all provinces, which provide for the rehabilitation of injured workmen.

In the year ended Mar. 31, 1971, federal expenditures under the vocational rehabilitation program totalled \$5,259,000. Reports received on 3,833 disabled or vocationally disadvantaged persons rehabilitated during the year indicated that, at the end of the year, 3,234 of them were rehabilitated to regular employment and 359 to sheltered employment or self-care; 240 were rehabilitated as housewives. The cost of support of the 3,234 who obtained employment and of their dependants was estimated, before rehabilitation, at \$2,210,000 annually; their aggregate earnings, following rehabilitation, were estimated at \$14,000,000.

### Section 3.—Provincial Welfare Programs

Major welfare programs governed by provincial legislation include social assistance, services for the aged and child welfare services. Also, the Province of Quebec operates the Quebec Pension Plan, which is comparable to the Canada Pension Plan (see p. 338), and a family allowance program (see p. 354). Provincial departments of public welfare are responsible for the administration of welfare programs, although administration of certain programs may be shared with their municipalities.

Public services are supplemented by those of voluntary agencies whose interests include the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups, and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may receive public grants, depending on the nature and standard of their services, although their main support is usually from United Appeal funds or from sponsoring organizations.

#### Subsection 1.—Social Assistance

All provinces make legislative provision for assistance to persons in need and their dependants. All provinces have incorporated provisions for allowances to needy mothers with dependent children in a broadened program of provincial allowances to several categories of persons with long-term need or in a general program under which the only eligibility requirement is need, irrespective of the cause of need.

In addition to allowances to cover items of basic need, such as food, clothing, shelter, fuel and utilities, all provinces make provision for such special items as rehabilitation services, expenses incidental to education or obtaining employment, counselling, homemaker

services and institutional care. The provinces are reimbursed by the Federal Government under the Canada Assistance Plan for 50 p.c. of the costs of assistance and of certain welfare services given by the provincial and municipal authorities (see p. 347). The provincial departments of welfare set rates of assistance and conditions of eligibility; they have regulatory and supervisory powers over municipal administration of assistance, and require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but municipal residence may determine the financially responsible authority. The provincial authority takes responsibility for aid in unorganized areas within the province and for persons who lack municipal residence.

The administration of assistance varies. In four provinces allowances to persons with long-term need, such as needy mothers with dependent children, disabled persons and the aged, are administered by the province and other allowances are administered by the municipalities. In Newfoundland, Prince Edward Island and New Brunswick, all assistance is administered by the provincial authority. In Quebec, the province administers assistance through regional and local offices, except in the City of Montreal where the municipality administers assistance on behalf of the province. In Saskatchewan, social assistance is administered by the province except in two municipalities which elected to retain responsibility for administration of the program. In British Columbia, a comprehensive program of general assistance is administered by the local authority, i.e., by the municipalities except in sparsely populated municipalities and in areas without municipal organization where aid is administered by the province; the province also administers a program of supplementary allowances to needy recipients of old age security pensions and the two federal-provincial categorical allowances. In the seven provinces where the municipalities have some administrative responsibility, the proportion of the costs of aid borne by the province varies from 40 p.c. to 100 p.c.

### **Subsection 2.—Living Accommodation for Elderly Persons**

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. These homes are required to meet standards set out in provincial legislation relating to homes for the aged, welfare institutions or public health. Voluntary homes are usually provincially inspected and in some provinces must be licensed.

All provinces in varying degrees make capital grants toward the construction or renovation of homes for the aged by municipalities or voluntary organizations and, generally speaking, such homes are exempt from municipal taxation. Some provinces also make provision for capital grants to municipalities, charitable organizations or non-profit corporations for the construction of low-rental housing for elderly persons. These projects are usually built under Sect. 16 of the National Housing Act, which provides for long-term low-interest loans to non-profit corporations constructing low-rental self-contained or hostel accommodation for older people. Units for the aged may also be included in low-rental public housing projects for families, built under Sect. 35 of the Act.

In some provinces efforts are made to place well, elderly people in small proprietary boarding homes. Those who are chronically ill may be cared for in chronic or convalescent hospitals, private or public nursing homes and some homes for the aged. All provinces contribute to the maintenance of needy persons in homes for the aged or other homes for special care, and these costs are shared by the Federal Government under the Canada Assistance Plan (see pp. 347-348).

### **Subsection 3.—Child Welfare Services**

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation. The programs are administered by the provincial authority or by local children's aid societies (voluntary agencies with boards of directors, operating under charter and under

the general supervision of provincial departments). In Newfoundland, Prince Edward Island, New Brunswick, Saskatchewan and Alberta, child welfare services are administered by the province; in Quebec, they are administered by recognized voluntary agencies and institutions, religious and secular; in Ontario, a network of local children's aid societies is responsible for the services; in Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province elsewhere.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from United Appeal funds. The costs of certain services and maintenance costs for children in care of a voluntary or public agency are sharable with the Federal Government under the Canada Assistance Plan (pp. 347-348).

Child welfare agencies, provincial or voluntary, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proved, the court may direct that the child be returned to his parent or parents under supervision, or be made a ward of the province or a children's aid society. Services are provided as appropriate and include services to children in their own homes, care in foster boarding homes or adoption homes or, for children who need it, in selected institutions. Institutions for children are governed by provincial child welfare legislation and are generally subject to inspection and in some provinces to licensing. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 18,600 annually.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established in the larger centres. These are chiefly under voluntary auspices, except in Ontario, where there are also municipally sponsored day nurseries operated with the aid of provincial grants.

#### **Subsection 4.—Newfoundland's Schooling Allowances Program**

The Province of Newfoundland introduced its Parents' Supplement (Schooling Allowance) program in 1966. Under this scheme, an annual benefit of \$15 is paid in semi-annual instalments for each eligible child who is registered at and attending a school other than a trade school or university. There is no age limit specified in the legislation but the allowance terminates when the child leaves school.

#### **Subsection 5.—Quebec's Family Allowances Program**

The Province of Quebec introduced its own family allowances program under legislation enacted in 1967. Under this plan, the following allowances are paid at the end of each six-month period to persons satisfying the relationship and residence requirements in respect of children under 16 years of age: \$15 for one child, \$32.50 for two children, \$52.50 for three children, \$77.50 for four, \$107.50 for five, \$142.50 for six, and an extra \$35 for each child after the sixth. These allowances are increased by \$5 for each child between the ages of 12 and 16 years. To qualify for the allowances, children must be attending school regularly from the time when they are first required to do so, unless prevented by physical or mental infirmity. These allowances supplement those paid under the federal scheme.

### Section 4.—Emergency Welfare Services

The function of the Emergency Welfare Services Division of the Department of National Health and Welfare is to develop community capability to provide, in the event of a national emergency, essential welfare services not available through established welfare agencies. A 1965 Order in Council set up five emergency welfare services—emergency clothing, emergency feeding, emergency lodging, registration and inquiry, and personal services—and gave the Division responsibility for the continuation of welfare departments in support of rehabilitation and recovery. To these ends, policy has been defined, systems designed and, at all levels of government, welfare resources planned.

In peacetime, trained specialists within the federal, provincial and municipal departments of welfare, organized nationally, are responsible for developing an emergency welfare capability. The program is an integral part of the Canada Survival Plan and is co-ordinated with the programs of other Canadian Government departments and private agencies. Leaders are being trained in the art of organizing large numbers of volunteers for emergency welfare operations and a public education program is being maintained. Special printed forms and equipment for survival, not regularly available through commercial sources, have been produced and are located strategically across Canada.

## PART III.—HEALTH AND SOCIAL WELFARE EXPENDITURES

### Section 1.—Government Expenditures on Health and Social Welfare

In the years ended Mar. 31, 1963-70, expenditures by all levels of government on health and social welfare rose from \$3,898,500,000 to an estimated \$8,547,500,000, a more than twofold increase. If these figures are adjusted to take account of growth in population, the increase in per capita expenditures—from \$208 to \$404—was about 95 p.c. Government expenditures may also be measured in relation to major economic indicators; on this basis, annual government expenditures on health and social welfare over the period remained relatively stable, fluctuating between 12.5 p.c. and 14.0 p.c. of net national income and between 9.5 p.c. and 10.6 p.c. of gross national product.

The federal share of health and social welfare expenditures fell from 68.8 p.c. in 1962-63 to 59.2 p.c. in 1969-70, the provincial share rose from 28.2 p.c. to 38.7 p.c., and municipal outlays declined from 3.0 p.c. to 2.1 p.c. Compared with 1968-69, health and social welfare expenditures by all levels of government increased by \$1,251,000,000 or just over 17 p.c. This may be compared to the rise of \$851,600,000 or 13 p.c. in 1968-69 over 1967-68. Expenditures by the federal and provincial governments increased by 14.6 and 21.4 p.c., respectively, from 1968-69 to 1969-70. The main items causing this rise included: higher disbursements under the Old Age Security and Guaranteed Income Supplement programs principally because of the lowering of the eligible age and the increase in the monthly benefits paid; greater expenditures incurred by the Canada Assistance Plan which is wider in scope than the categorical programs it is intended to replace; higher expenditures under the Unemployment Insurance Act; higher expenditures under the Canada Pension Plan; greater outlays on behalf of health and welfare for the Indian and Eskimo populations; increasing expenditures under the Hospital Insurance and Diagnostic Services Act; increasing expenditures under the Medical Care Act; and contributions to the provinces under the Health and Hospital Construction Grants and the new Health Resources Fund Act.

The relative federal declines, compared to provincial gains in recent years, have been caused to a substantial degree by increasing hospital expenditures by the provincial govern-

ment augmented by the effect of the "opting-out" arrangements made available to the provinces. Under the Established Programs (Interim Arrangements) Act, a province may choose to receive contributions from the Federal Government in the form of a tax abatement and an equalization payment in lieu of a direct federal contribution under the program. The opting-out arrangements have the effect, in this presentation, of showing an increase in provincial government expenditures while the federal fiscal payment is treated not as an expenditure but as a transfer payment. Thus, provincial expenditures include gross outlays by Quebec whereas federal expenditures on health and social welfare do not include the large sums paid or transferred to that province under the Established Programs (Interim Arrangements) Act and other fiscal arrangements.

The proportion of government expenditures on health and social welfare taken up by health programs continues to grow; in 1961-62 such programs accounted for \$1,126,000,000 or 31 p.c. of the total and in 1969-70 they amounted to \$3,557,000,000 or 42 p.c.

An outline of the principal federal income maintenance programs for 1969-70 shows the magnitude of the major programs and services—family allowances payments amounted to \$560,000,000, old age security payments to \$1,467,000,000 plus another \$263,000,000 under the guaranteed income supplement program, unemployment insurance benefits to \$542,000,000 and veterans pensions and allowances to \$218,000,000 and \$92,000,000, respectively. In addition, payments under the youth allowances program, which commenced in September 1964, amounted to \$55,000,000 excluding the Province of Quebec. That province had instituted a program of schooling allowances three years prior to the introduction of the federal program and this necessitated a special arrangement whereby Quebec continued its program but with appropriate fiscal reimbursement from the Federal Government. In 1967-68, Quebec inaugurated its own family allowances program supplementing the federal scheme (see p. 354).

#### EXPENDITURE ON HEALTH AND SOCIAL WELFARE BY ALL LEVELS OF GOVERNMENT, YEARS ENDED MAR. 31, 1951-70

EXPENDITURE ON HEALTH AND SOCIAL WELFARE BY ALL  
LEVELS OF GOVERNMENT WITH PERCENTAGES OF TOTAL  
GOVERNMENT EXPENDITURE, NET NATIONAL INCOME AND  
GROSS NATIONAL PRODUCT,  
YEARS ENDED MAR. 31, 1956-70

Federal-provincial income-maintenance programs in 1969-70 required expenditures of \$900,000 for old age assistance, \$1,900,000 for blindness allowances, \$4,400,000 for disabled persons allowances and \$700,000 for unemployment assistance, the latter including some municipal expenditures. The smallness of these amounts indicates the effectiveness of the Canada Assistance Plan, for which this was the fourth year of operation and which was intended to replace all activities under those programs at the option of each province (see pp. 347-348). In 1965, Quebec withdrew from these federal-provincial programs under the Established Programs (Interim Arrangements) Act, which entitled that province to a tax abatement and an equalization payment. Canada Assistance Plan expenditures in 1969-70 were \$294,000,000. Provincial workmen's compensation boards spent \$185,000,000 cash benefits for pensions and compensation.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled \$622,000,000 and grants for hospital construction and general health grants to the provinces and municipalities amounted to \$36,000,000. Provincial expenditures on hospital care were estimated at \$1,840,000,000 and expenditures on other health services at \$460,000,000. In addition, provincial workmen's compensation boards paid \$65,000,000 for medical aid and hospitalization, and municipal governments spent an estimated \$99,000,000 on health.

## Section 2.—Expenditures on Personal Health Care

Expenditures on personal health care reported here comprise expenditures of hospitals, earnings of physicians and dentists for professional services to their patients, and the value of prescription sales by retail pharmacies. Excluded are expenditures on the services of private nurses, chiropractors, osteopaths and optometrists; and expenditures on public health, on capital (buildings and interest) and on the administration of public health programs and of insurance plans.

Table 2 shows the components for each year from 1961 to 1970. Canadians spent a total of \$4,387,100,000 on personal health care in 1970, almost three times as much as in 1961. Expressed as a proportion of the gross national product, personal health care expenditures rose from 4.1 p.c. in 1961 to 5.2 p.c. in 1970. Expenditure per person over the same period changed from \$86.89 to \$204.95.

**2.—Expenditures on Personal Health Care, 1961-70**

(Millions of dollars)

<sup>1</sup> Preliminary estimates, except 1969 data for "Hospital Services, Government of Canada" and "Physicians' Services", which are final.

## PART IV.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, medical research, and education. These agencies complement the services of the federal and provincial authorities in many fields, and play leading roles in stimulating public awareness of health and welfare needs and in promoting action to meet them. The organization and services of the following agencies are described in the 1970-71 Year Book at pp. 396-402:—

The Canadian Arthritis and Rheumatism Society  
 The Canadian Association for the Mentally Retarded  
 The Canadian Cancer Society  
 The Canadian Cystic Fibrosis Foundation  
 The Canadian Diabetic Association  
 The Canadian Hearing Society  
 Canadian Heart Foundation  
 Canadian Medio-Alert Foundation  
 The Canadian Mental Health Association  
 The Canadian National Institute for the Blind  
 The Canadian Paraplegic Association  
 The Canadian Red Cross Society  
 The Canadian Rehabilitation Council for the Disabled  
 The Canada Safety Council  
 The Canadian Tuberculosis and Respiratory Disease Association  
 The Canadian Welfare Council (now The Canadian Social Development Council)  
 The Health League of Canada  
 The Multiple Sclerosis Society of Canada  
 The Muscular Dystrophy Association of Canada  
 The National Cancer Institute of Canada  
 The St. John Ambulance Association  
 The Victorian Order of Nurses.

## PART V.—UNIFORM LEGISLATION GOVERNING PRIVATE PENSION PLANS

The enactment of the Canada and Quebec Pension Plans emphasized the need for uniform private pension legislation across Canada. Ontario amended the Ontario Pension Benefits Act with effect from July 30, 1965, and Quebec enacted the Supplemental Pension Plans Act with effect from July 15, 1965. The Pension Benefits Act of Alberta came into force on Jan. 1, 1967, and that of Saskatchewan was assented to on Apr. 1, 1967. The provincial legislation governs all pension plans operating on and after the effective date in the particular province. Similar legislation at the federal level, the Pension Benefits Standards Act, was assented to on Mar. 23, 1967, and is applicable only to pension plans having members employed in works, undertakings and businesses (generally, banks and interprovincial transportation and communication) that are under federal jurisdiction.

Under these Acts, basic standards have been established with which pension funds or plans organized and administered to provide a pension benefit to employees must comply in order to receive registration, and they are not allowed to operate in these provinces or in the federal areas of responsibility unless they have received registration.

By agreement, each of the provinces mentioned above recognizes similar legislation of the others, so that a pension plan that has been registered and reports in one province does not have to seek registration or duplicate all its reporting procedure in another of these provinces if it extends its operations to employees in that other province.

The legislation requires that an employee's benefits under a pension plan become fully vested (i.e., he has full entitlement to those benefits, which will be paid to him on retirement) when he reaches age 45 and has completed either a minimum of ten years of membership in a pension plan or ten years of service with the one employer. Moreover, should the employee leave his job or resign his membership in the plan prior to retirement, at least 75 p.c. of his total benefits under the plan must be locked-in for purposes of his pension, allowing him to withdraw no more than 25 p.c. of the commuted value of those benefits in a lump sum. These rules apply as from the qualification date established under the legislation or from the date the plan was established if it commenced operations after the qualification date.

Other provisions of this legislation are intended to ensure the full solvency of these pension plans within a specified period of time, to restrict the types of investments in which the funds of the plan may be invested, to provide that an employee's pension rights are portable if he should change his job, and to establish that each interested party to a pension plan is adequately informed as to the provisions of the plan.

## PART VI.—VETERANS SERVICES\*

The Department of Veterans Affairs administers most of the legislation known collectively as the Veterans Charter and also provides administrative facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board, which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary General (Canada) of the Commonwealth War Graves Commission.

The principal benefits now available to veterans are medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for the children of the war dead, general welfare services, disability and dependants pensions and war veterans allowances. The work of the Department, except the administration of the Veterans' Land Act, is carried out through 18 district offices and four sub-district offices in Canada and one district office in England; the benefits of the Veterans' Land Act are administered through seven regional offices and 26 district offices across Canada.

\* Prepared by the Department of Veterans Affairs, Ottawa.

## Section 1.—Pensions and Allowances

### Disability and Dependants Pensions

**Canadian Pension Commission.**—The Canadian Pension Commission administers the Pension Act (RSC 1970, c. P-7) and Parts I to X of the Civilian War Pensions and Allowances Act (RSC 1970, c. C-20). The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs. The Commission has district offices in principal cities across Canada with a Senior Pension Medical Examiner in charge.

**The Pension Act.**—Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics on numbers and liabilities.

The Pension Act makes provision for the payment of pensions in respect of disability or death resulting from injury or disease incurred during or attributable to service with the Canadian Forces in time of war or peace. Provision is also made for supplementing, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or payment of pension at Canadian rates in cases where the claim has been rejected by the government of the country concerned.

Following are the rates of pension under Schedules A and B of the Pension Act from 1919 to date (December 1971).

Apr. 1, 1971.....	1,800	2,640	456	792	264

NOTE.—The rates for orphan children or orphan brothers and sisters are double those shown above. The pensionable children of widows who have been awarded pension are paid at orphan rates. Pensions awarded to parents or brothers and sisters may be less than the amounts shown in accordance with the provisions of the Pension Act.

Legislation assented to Apr. 7, 1971 (SC 1970-71, c. 34) provided an increase of 10 p.c. in the rate of pension effective Apr. 1, 1971; the rate for a 100-p.c. disability was increased from \$3,180 to \$3,504 a year. A widow's pension was increased to \$2,640 from \$2,400 and the maximum rate for the dependent parent of a deceased member of the forces was raised from \$1,632 to \$1,800 a year.

Amendments to the Pension Act (SC 1970-71, c. 31), which received Royal Assent on Mar. 30, 1971, provided many extensive benefits for pensioners and broadened the entire structure of pension legislation. Among the major changes was the provision of an exceptional incapacity allowance which permits, where merited, the grant of an additional amount of not less than \$800 and not more than \$2,400 a year for those 100-p.c. pensioners who suffer an exceptional incapacity. A basic minimum payment equivalent to pension at the rate of 50 p.c. was instituted for all ex-prisoners-of-war of the Japanese who have any assessable disability. In addition, deceased prisoners-of-war of the Japanese, whose death occurred prior to the proclamation of the amendments, will be presumed to have been in receipt of pension at an amount equivalent to 50 p.c. at the time of death; thus, all qualified widows and orphans of ex-prisoners of the Japanese are assured pension benefits whether or not death was attributable to service.

Other new provisions incorporated in the amended Act included: clarification of entitlement to pension for members of the peacetime forces; broadening of entitlement for and increased amounts for clothing allowances; additional pension for loss of a paired limb or organ from any cause whatever; provisions for posthumous assessment, where pension was paid at less than 48 p.c., to determine whether the disability was adequately assessed at that time; provision for a widow or child to continue or to initiate an application for pension in respect of a veteran's disability during lifetime on which he had failed to make application—if this claim can be established and if this raises the pension level to 48 p.c. or higher, survivor benefits may then be paid; and new adjudicating processes which will permit all claimants, whose applications have been rejected in the past, to re-apply to the Commission.

The amended Act authorized the establishment of the Pension Review Board which has the power to determine any questions of law or fact as to an award, and the amount of any such award; the decision of the Board is final and binding. The Board is also the responsible body when matters of interpretation of the Act are at issue. A pension applicant who is dissatisfied with a ruling of the Commission may appeal to the Pension Review Board.

The Civilian War Pensions and Allowances Act, Parts I to X, provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the war effort during World War II and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the Armed Forces Transport Command, firefighters who served in Britain, etc.

#### 1.—Pensions in Force under the Pensions Act, as at Mar. 31, 1971

Service	Disability		Dependant		Disability and Dependant	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability
	No.	\$	No.	\$	No.	\$
World War I.....	22,298	29,503,226	12,752	29,760,139	35,050	59,263,365
World War II.....	102,666	112,794,212	15,220	30,426,538	117,886	143,220,750
Regular Force.....	3,344	2,729,733	661	1,658,623	4,005	4,388,356
Special Force.....	2,010	1,948,588	175	328,691	2,185	2,277,279
<b>Totals.....</b>	<b>130,318</b>	<b>146,975,759</b>	<b>28,808</b>	<b>62,173,991</b>	<b>159,126</b>	<b>209,149,750</b>

Important amendments were also made to this Act in 1971. The principal change was to remove the requirement—in the case of merchant seamen and certain others who served in civilian status—that application for pension must be made within one year of the occurrence of the disability concerned. The special provisions for members of the Forces who were prisoners of the Japanese are now fully applicable to merchant seamen and other designated civilians during wartime.

### War Veterans Allowances and Civilian War Allowances

**War Veterans Allowance Board.**—The War Veterans Allowance Board is a quasi-judicial body consisting, at present, of ten members appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. The Board acts as an appeal court for an applicant or recipient aggrieved by a decision of a District Authority and may, on its own motion, review and alter or reverse any adjudication of a District Authority. The Board is also responsible for instructing and guiding the District Authorities in the interpretation of policy and for advising the Minister with respect to Regulations concerning the administration of the Act.

**War Veterans Allowance District Authorities.**—In 1950, 18 District Authorities were established in the regional districts of the Department of Veterans Affairs and granted full power to adjudicate on all matters arising under the War Veterans Allowance Act. In 1960, a separate authority—the Foreign Countries District Authority—was established to look after recipients living outside Canada. The members of a District Authority are employees of the Department of Veterans Affairs appointed by the Minister with the approval of the Governor in Council.

**War Veterans Allowances.**—The War Veterans Allowance Act (RSC 1970, c. W-5), provides an allowance to otherwise qualified war veterans who, because of age or infirmity, are no longer able to derive their maintenance from employment and to ensure that their income does not fall below a specified scale. Widows and orphans of qualified veterans are eligible for benefits. Since its inception in 1930, the Act has been amended on 15 different occasions to meet additional needs of veterans and their dependants. The most recent amendment increased monthly rates and annual income ceilings, effective Apr. 1, 1971 to:—

<u>Item</u>	<u>Monthly Rate</u>	<u>Annual Income Ceiling*</u>
	\$	\$
Single.....	121	1,932
Married.....	201	3,252
One orphan.....	69	1,116
Two orphans.....	121	1,800
Three or more orphans.....	163	2,280

\* Where a recipient or spouse is blind, the income ceiling is \$120 higher.

At Dec. 31, 1970, there were 81,166 recipients of War Veterans Allowances, made up of 48,515 veterans, 32,310 widows and 341 orphans; 691 of the total resided outside Canada. The annual liability for all recipients was estimated at \$85,064,387.

**Civilian War Pensions and Allowances.**—Part XI of the Civilian War Pensions and Allowances Act makes available to certain groups of civilians, their widows and orphans, benefits similar to those available to veterans under the War Veterans Allowance Act. These groups, which performed meritorious service in World War I or World War II, are: Canadian merchant seamen of both wars; non-Canadians who served in Canadian merchant

ships in either war; Canadian voluntary aid detachments of World War I; Canadian firefighters of World War II; Canadian welfare workers of World War II; Canadian transatlantic aircrew of World War II; and Newfoundland Overseas Forestry Unit of World War II.

At Dec. 31, 1970, there were 2,124 civilians, 570 widows and nine orphans in receipt of Civilian War Allowances, a total of 2,703, of whom four resided outside Canada. The annual liability was estimated at \$3,625,334.

### **Bureau of Pensions Advocates**

The Bureau of Pensions Advocates was established under the Minister of Veterans Affairs by the amendments to the Pension Act 1971 (SC 1970-71, c. 31), effective Mar. 30, 1971. It succeeds the Veterans Bureau which had been in operation since 1930. The Bureau is not part of the Department of Veterans Affairs, but provides an independent professional legal aid service to applicants for awards under the Pension Act. The Chief Pensions Advocate is the Chief Executive Officer and is assisted by pensions advocates, all of whom are lawyers, located at the Bureau's Head Office in Ottawa and in district offices in major centres across Canada. Pensions Advocates represent applicants as counsel at Entitlement Board and Pension Review Board hearings and provide a general counselling service to applicants relative to their claims under the Pension Act. No charge is made for the services of the Bureau.

Statistics are not available for the new Bureau of Pensions Advocates but in its last year the Veterans Bureau presented 5,736 claims to the Canadian Pension Commission for adjudication of which 42 p.c. were wholly or partially granted.

## **Section 2.—Welfare and Treatment Services**

### **Welfare Services**

Welfare services for veterans and, where appropriate, their dependants are provided by the Welfare Services Branch. These include the administration of assigned statutes; the conducting of field work, and reporting for other branches of the Department, the Canadian Pension Commission, the War Veterans Allowance Board and Services Benevolent Funds; and the provision of a rehabilitation and welfare program of advice and counselling including referral, where indicated, to other public or private agencies, veterans organizations, etc.

**Assistance Fund.**—Recipients of benefits under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act living in Canada may be given help from the Assistance Fund if their total income is lower than the permitted maximum. Assistance may take the form of a monthly supplement based on shelter, fuel, food, clothing, personal care and specified health costs or of a single award to meet an unusual or emergency need. The number of persons assisted in the year ended Mar. 31, 1971 was 19,666, the number in receipt of monthly supplements at the end of 1970 was 16,037 and Fund expenditures to Mar. 31, 1971, amounted to \$7,800,000.

**Education Assistance to Children.**—The Children of War Dead (Education Assistance) Act provides help in the form of allowances and the payment of fees for the post-secondary education of children of persons whose deaths have been attributed to military service. Assistance is restricted to children attending, in Canada, education institutions that require secondary school graduation matriculation or equivalent standing for admission, including, in addition to universities and colleges, such facilities as hospital schools of teaching and institutes of technology. From its inception in July 1953 to Mar. 31, 1971, expenditures totalled \$10,003,795, of which \$5,493,683 was spent in allowances and \$4,510,112 in fees. By the end of March 1971, 5,525 children of Canada's war dead had

been approved for training; of these, 2,885 had successfully completed training. At the same date, there were 717 students in university and non-university courses receiving assistance.

**Veterans Insurance.**—The Returned Soldiers Insurance Act (SC 1920, c. 54 as amended) provided eligibility to contract for life insurance with the Federal Government up to a maximum of \$5,000 to any one veteran of World War I. No policies were issued after Aug. 31, 1933. There were 48,319 policies issued during the eight years in which the Act was open amounting to \$109,299,500 and, of these, there were 4,314 in force with a value of \$9,325,041 on Dec. 31, 1970.

The Veterans Insurance Act (RSC 1970, c. V-3) enabled veterans following their discharge and widows of those who died during World War II service to contract with the Federal Government for a maximum of \$10,000 life insurance. Veterans with active service in Korea were extended eligibility by virtue of the Veterans Benefit Act 1954. The period of eligibility to apply for this insurance ended Oct. 31, 1968. To Oct. 31, 1968, 56,148 policies in the amount of \$185,141,500 had been issued and, of these, 23,814 with a value of \$76,665,852 were in force on Dec. 31, 1970.

**Rehabilitation and Welfare.**—Welfare officers at Departmental District Offices work closely with other branches of the Department, with other public agencies at all levels and with private agencies and organizations in assisting veterans and their dependants to deal with problems of social adjustment, particularly those associated with physical disabilities or the disabilities of increasing age. The latter occur more frequently, of course, as the age of the veteran population increases. A program of university, vocational, technical and home training with allowances, is provided for disabled pensioned veterans and vocational rehabilitation is also promoted by training assistance. Sheltered workshops at Toronto and Montreal and home assembly work in other centres produce poppies and memorial wreaths associated with Remembrance Day observances.

### Treatment Services

The Treatment Services Branch of the Department of Veterans Affairs provides medical and dental services for entitled veterans throughout Canada as well as for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned. Prosthetic services are provided to entitled veterans by the Department of National Health and Welfare but paid for by the Department of Veterans Affairs.

The Branch provides examination and treatment to disabled pensioners for their pensionable disabilities, and provides treatment to war veterans allowance recipients (but not to their dependants) and veterans whose service and financial circumstances render them eligible for free treatment or at a cost adjusted to their ability to pay. If a bed is available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of hospitalization. The pensioner receives treatment for his pensionable disabilities regardless of his place of residence but service to other veterans is available in Canada only. Subject to the approval of the Department, an eligible veteran may also obtain treatment at the expense of the Department in an outside hospital from a doctor of his choice. Domiciliary care may be provided to eligible veterans in Departmental facilities where the need for active or chronic treatment is sufficiently light, provided that excess beds are available.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Where treatment is given for a non-pensioned condition at a DVA hospital to a veteran, or elsewhere to a veteran eligible under the veterans treatment regulations, the hospitalization is an insured service under the federal-provincial hospital insurance program and his medical care is an insured service

under the federal-provincial medical care insurance program. The Department pays premiums where required on behalf of veterans who are eligible for war veterans allowance.

**Hospital Facilities.**—Treatment is provided in nine active treatment hospitals located at Halifax, N.S.; Saint John, N.B.; Montreal and Ste. Anne de Bellevue, Que.; London, Ont.; Winnipeg, Man.; Calgary, Alta.; and Vancouver and Victoria, B.C.; and in three domiciliary care homes at Ottawa, Ont., Saskatoon, Sask., and Edmonton, Alta. The rated bed capacity of these institutions at Dec. 31, 1970, was 6,005 beds. It should also be noted that in Ottawa both acute and chronic cases requiring definitive treatment are admitted to the National Defence Medical Centre. A veterans pavilion of 67 beds is located at St. John's General Hospital, St. John's, Nfld.; 1,200 beds are available at Sunnybrook Hospital in Toronto and 150 at the Centre Hospitalier de l'Université Laval in Quebec for the priority use of veterans, and some 500 beds in community hospitals located in St. John's, Nfld., Charlottetown, P.E.I., Kingston, Ont., Regina and Saskatoon, Sask., and Edmonton, Alta.

**Medical Staff and Training Programs.**—The active and consulting medical staffs of departmental hospitals are usually private practitioners and specialists who also hold teaching appointments on the medical faculties of the various local universities. Their appointment and selection is normally recommended by the Deans of Medicine of the universities with which the departmental hospitals are affiliated. This affiliation results in approval by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in resident teaching programs of non-core years in medicine, surgery, psychiatry and other specialties. Some departmental hospitals are also affiliated with technical schools and act as hospital teaching units in technical school programs for paramedical sciences such as laboratory and radiology technicians. In addition, residency training programs are given in psychology, dietary, physiotherapy and occupational therapy, and in the medical social services at both the undergraduate and graduate levels. A post-graduate residency program in hospital pharmacology and pharmacy methodology is conducted at Westminster Hospital, London, Ont. At Camp Hill Hospital in Halifax, Shaughnessy Hospital in Vancouver, Deer Lodge in Winnipeg, and Westminster Hospital in London, the Department has become affiliated with the university medical school in the undergraduate clinical teaching program, in addition to participating in graduate residency training.

### Section 3.—Land Settlement and House Construction

The Veterans' Land Act (RSC 1970, c. V-4) provides financial, technical and supervisory assistance to World War II and Korean Force veterans, to enable them to engage in agriculture or commercial fishing on a full-time basis; to acquire, build or improve homes; and to settle on provincial, federal and Indian reserve land. Loans may be made of up to \$40,000 for full-time farmers on economic farm units, to \$18,000 for small family farmers, to \$16,000 for small holders (part-time farmers) and to \$18,000 for veterans building houses on city-size lots. The financial assistance available under the Act is generally comparable to that available to non-veterans under the Farm Credit Act and the National Housing Act.

From the inception of the Act in 1942 to Dec. 31, 1970, 123,858 veterans were settled under its provisions; 31,358 were established as full-time farmers, 79,325 as small holders, 5,664 as Crown land settlers and 1,415 as commercial fishermen, 1,776 Indian veterans were established on reservations and 4,320 veterans acted as their own contractors in building homes on city-size lots. Subsequent to settlement, 18,232 farmers and 15,362 small holders and commercial fishermen were given additional assistance. In 1970, loans amounting to over \$47,755,665 were approved on behalf of 5,611 veterans. From inception of operations to the end of 1970, \$1,087,692,016 was spent on repayable loans, advances and non-re-

payable grants and 64,740 veterans had earned conditional grants of \$114,285,289. By the end of that year, 47,038 of them had successfully completed their settlement contracts—15,727 farmers, 24,405 small holders, 605 commercial fishermen, 4,642 Crown land settlers, and 1,659 Indian veterans on reservations.

Field officers, highly trained in the techniques pertaining to agriculture, construction and land appraisals, provide advisory, supervisory and appraisal field services. During 1970, 3,923 properties were appraised, included in which were 145 for the Indian Off-Reserve and Eskimo Housing Program and 560 special assignments carried out on behalf of other government departments and agencies. Altogether, 716 new houses were started—703 for small holders and commercial fishermen, seven farm homes and six on city-size lots—and 1,254 new houses were completed.

During the year ended Mar. 31, 1971, instalments falling due on properties purchased by veterans under the Act amounted to \$34,248,042, excluding share-of-crop payments; over 91.8 p.c. of the total amount due was collected and 1,217 veterans under share-of-crop agreements paid \$1,334,051.

By Dec. 31, 1970, 16,052 veterans were insured under the Veterans' Land Act group life insurance for almost \$157,828,000. Since inception of the group plan, 219 insured veterans died and \$1,667,161 was paid to retire their indebtedness.

## 2.—Summary of Operations Under the Veterans' Land Act, as at Dec. 31, 1970

Item	Full-Time Farming	Small Holding	Commercial Fishing	Provincial Lands	Federal Lands	Indian Reserves	City-Size Lots	Total

<sup>1</sup> Includes 5,680 civilian purchaser accounts from inception. counts.

<sup>2</sup> Includes 900 active civilian purchaser accounts.

## Section 4.—Commonwealth War Graves Commission

The current Charters of the Commonwealth War Graves Commission consist of two documents—the Original Charter of Incorporation dated May 21, 1917, and the new Supplemental Charter dated June 8, 1964. Under these Charters the Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939, and Dec. 31, 1947, and with the erection of memorials to commemorate those with no known grave.

The Canadian High Commissioner in London, England, is the official Commission member for Canada, the Minister of Veterans Affairs is the Agent of the Commission in Canada, and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

### PART I.—FORMAL EDUCATION\*

#### Section 1.—Current Developments in Education

The cost of education in Canada for the year ended Mar. 31, 1969 has been estimated at \$5,800,000,000, an amount representing slightly more than 8 p.c. of the gross national product; by comparison, the 1960 cost of education represented 4.3 p.c. of the gross national product. The increase is related to the fact that, during the 1960s, school and university enrolment increased by 50 p.c. and staff by 70 p.c. This culminated, by 1970, in approximately 30 p.c. of the entire population of Canada either receiving or dispensing education.

In the past decade, Canada's education administrators have become increasingly aware of the need for young people to receive the types of education that will prepare them for their futures; for professional, technological and cultural education to be diversified and of a relatively high standard; and for the provision of equal educational opportunity for each individual regardless of socio-economic status, sex, ethnicity or region. Linked to equality of opportunity and the need for diversified programs, education planners are offering a wide choice of courses at all levels of education. At the elementary and secondary levels, courses are included on fine arts, music, drama, urban planning, social geography, and man in society. Community colleges and vocational institutions give a widening range of advanced technological and para-professional courses. Universities offer varied interdisciplinary programs at the undergraduate and graduate levels and some have instituted programs of Canadian studies.

\* Prepared in the Education Division, Statistics Canada.

At the post-secondary non-university level, a proliferation of new structures has evolved. The most innovative type of institution that emerged across the country in the 1960s is generically known as the "community college". For example, in the Province of Quebec, there are now about 40 colleges of this type, many of them formerly operated by religious communities. They are now known as "collèges d'enseignement général et professionnel" and are commonly referred to as CEGEPs. There are also about 20 private classical colleges in the province, some of which will undoubtedly be absorbed into the CEGEP group within the next few years. Similarly in Ontario, colleges of applied arts and technology (which incorporated the former institutes of technology and the provincial vocational centres and are known as CAATs) were set up in 1967 in 20 regions. This upsurge in the establishment of additional post-secondary vocational and technological institutions has occurred all across Canada. The institutions are evolving to meet the labour market's increasing need for qualified technicians and the students' need for diversified education.

Another significant change in education is the greater accessibility of programs to students regardless of sex. Females, who comprised about 35 p.c. of the full-time university and community college enrolment in 1971, are increasingly selecting, and being selected for, certain post-secondary courses which previously had shown almost total male enrolments. For instance, greater numbers of females are studying architecture and urban planning, engineering and applied sciences, dentistry, law and pharmacy, and there are even a few females enrolled in such courses as electronics and forestry in certain institutions across the country. At the same time, male students are selecting courses which were formerly the preserves of females, such as nursing, social work, library science, dietetics and nutrition, and especially education. As education and occupations previously designated as male- or female-oriented become more open to both sexes, occupational choice will become increasingly more dependent on interest and ability regardless of sex. A major determinant of this transition is the continuing change in the cultural definitions of male and female work.

Further changes in Canadian education have been brought about by the realization that adjustments had to be made to accommodate variations in interest and abilities of students in different subjects. This has resulted in a drastic revision of policies to include non-graded systems, subject promotion, changes in methods of examination and the extension of guidance facilities.

One of the notable increases in teaching facilities is in the area of library service. A Statistics Canada survey showed that, in the school year 1968-69, school libraries increased their stocks of books by nearly 8,000,000. These libraries provide up-to-date reference books on all subjects in the school curricula and have assumed increasing importance as resource centres for audio-visual aids such as projectors, films, filmstrips, maps, tapes and records.

Efforts are also being made to overcome the financial barriers to continuing education. The investigations of demographers and sociologists confirmed the long-held suspicions that financial constraints were operating to deny education to many Canadians who could profit from it. Various methods have therefore been sought to lighten the financial burden upon the individual and to equalize the rapidly increasing load being carried by the taxpayer. The Federal Government is assuming an increasingly prominent role in the education field, particularly in regard to the re-training program of the Department of Manpower and Immigration involving adult technical and vocational training, post-secondary education and university education, all matters of prime concern to the nation as a whole.

The recent structural changes at the post-secondary level of education are described in more detail in the special article that follows.

## STRUCTURAL CHANGES IN TERTIARY EDUCATION IN CANADA\*

Educational growth in Canada over the past two decades has been marked by very substantial increases in total enrolment, with a corresponding rise in school construction. Increases in enrolment at the elementary and secondary levels have been accompanied by a significantly larger percentage of Canadian youth completing their secondary schooling and thus qualifying for admission to a variety of post-secondary institutions. The paragraphs that follow will show how this tertiary level of education has responded to the pressures of a society which has demanded more education.

Post-secondary education, since 1950, has grown at a faster rate than other levels of education; it has developed a range of new programs; it now spends around two billion dollars a year. Included in this level of education are such institutions as: community colleges, colleges of applied arts and technology, collèges d'enseignement général et professionnel, technical institutes, teachers' colleges, church-related colleges, and universities of varying complexity. These institutions, numbering several hundred, involve thousands of administrators, tens of thousands of teachers and hundreds of thousands of full and part-time students. It is in these institutions that Canada is developing its own pool of highly qualified manpower.

In most developed countries the education and training for high-level skills is accomplished by means of a centralized and uniform system of institutions. In Canada, where responsibility for education is a matter of provincial jurisdiction, this is not the case. A number of diverse and non-co-ordinated post-secondary educational institutions have been developed which have responded to apparent needs. Even within provinces, examples of considerable duplication of tertiary level educational services may still be found. In part, this lack of co-ordination reflects a strong belief that the effectiveness of post-secondary education, particularly at the university level, bears a direct relationship to the independence of the institutions. The history of university development over the past thousand years provides striking evidence in support of this belief. Thus, Canadian institutes of higher learning were, for the most part, established as private institutions with little support from government. In contrast, post-secondary non-university structures are heavily supported by government. The non-university sector of tertiary education has a relatively short history in Canada; for the most part, it was concerned initially with teacher training, and this has always been, largely, a concern of provincial departments of education. It is noteworthy that less than 25 years ago over 100 normal schools and teachers' colleges were operated under the direct control of government. By 1971, gradual integration of teacher training into universities left only 14 such institutions in the field.

Rapidly rising enrolments in the universities during the 1950s and 1960s placed severe strains on their resources as they responded to the demands for more education from a larger proportion of Canadian youth. Experimental programs were devised in a number of institutions with a view to meeting the changing demands of new and different graduate and undergraduate students. Substantial financial assistance was provided for both capital and operating expenditures by the provincial and federal governments. As the university sector grew in size and importance, it became apparent that the growing need for more education could not be satisfied solely by the universities. As a result, a significant number of non-university institutions were established.

Canadian cultural and social patterns have been frequently referred to as mosaic. Developments in post-secondary education appear to confirm this perception of Canadian life. There is great variety in the institutions designed to meet the tertiary educational needs of the Canadian community. They all serve the same basic purpose but there is little consistency among them.

\* Prepared (January 1972) by Miles Wisenthal, Director, and Eve Kassirer, Chief of Special Studies and Publications, Education Division, Statistics Canada, with acknowledgement to Alwyn Berland, Executive Secretary, Canadian Association of University Teachers; Dr. Gordon Campbell, Associate Professor, Faculty of Education, University of Lethbridge; Robin S. Harris, Chairman, Higher Education Group, University of Toronto; Geoffrey Holmes, Executive Secretary, Association of Atlantic Provinces; Dr. Lucien Michaud, Research Director, Association of Universities and Colleges of Canada; Dr. David Munroe, Special Advisor, Secretary of State; and Sandra Adler, Statistics Canada.

*Carleton University, attractively situated between the Rideau River and the Rideau Canal in south Ottawa, has grown steadily since it was established as a college in 1942 but particularly since it moved to its present site in 1959 and was incorporated as a university in 1967. Full-time student enrolment in 1971-72 was 8,575 and part-time enrolment 5,750.*

### **Changes in the Structural Profile of Tertiary Education**

The universities still are the predominant and traditional institutions offering tertiary education to Canadians. However, the recent growth of non-university institutions (particularly community colleges) has been little short of phenomenal and, in the process, the previously sharply defined distinction between levels of education have become faded and blurred. In this transition, transfers of responsibility for the education for various professionalized occupations have been effected, which tend to place all of education on a continuum. For example, nurse training, which was once offered only within hospital structures, is now provided at universities and in community and regional colleges. Variations on the applied-theoretical continuum in health care education now extend from colleges to universities; from diplomas to graduate degrees. In most cases in the health field there has been a trend to make greater use of the college sector of education for the training of medical technologists.

A reversal of this trend is observed in teacher training. In 1951, nearly 30 p.c. of the students enrolled in non-university institutions were teachers-in-training in normal schools and teachers' colleges. In 1971, 20 years later, less than 3 p.c. of the total non-university college population were teacher trainees. In fact, the number of teacher training institutions has been reduced to a total of 14. Most teachers are now receiving their training in universities.

The scope of tertiary education has been broadened to include some provincially operated vocational schools, and to marginally link up with secondary school night classes designed to offer part-time continuing education to adults.

### Community College Structures\*

The term "community college" used across Canada in the generic sense, refers to a group of tertiary-level structures across the country having certain characteristics more or less in common. None grants degrees; all are oriented to community needs. Colleges offer one, two, or three years of study beyond secondary school. The college's chief function is not research but teaching. Many are public institutions stressing an open-door policy and are supported financially by the government; others are private. Instruction, available to both full-time and part-time students, is offered in the day and evening. Few in fact use the term community college in their name.

Provincial community colleges exist in an array of forms throughout Canada and within provinces. Some are comprehensive, offering both university-parallel programs and technological training. Others offer programs in only one category or the other. These structures are characterized by great flexibility and diversity in programs, student populations, administrative arrangements and philosophical bases. These diverse elements are readily apparent in the developments presented below of community college structures in each of the provinces in Canada. The fact that no fixed pattern has yet evolved enhances the potency of the community college system.

Although the Atlantic Provinces have long fostered institutes of technology in preference to community-oriented colleges, a change toward the latter has begun. A citizens' planning committee helped found Holland College in Prince Edward Island in 1969; a three-man inquiry on Bilingual Higher Education in Nova Scotia recommended the establishment of a bilingual community college; the New Brunswick Higher Education Commission's report in 1969 urged the expansion of post-secondary diploma level courses; and as far back as 1967 Newfoundland's Royal Commission on Education and Youth urged the establishment of community colleges.

Quebec's collèges d'enseignement général et professionnel (CEGEPs) which offer both academic and transfer courses have swiftly transferred the structure of tertiary education in that province. Quebec is the only province in which college level education is a prerequisite for entrance to a Quebec university. Of the CEGEPs created since 1965, 35 in 1970 are French language; four—Dawson, Vanier, Sir John Abbott, and Champlain College—opened in 1969, 1970 and 1971, are English language. In keeping with the concept of a community college, each CEGEP has a board of directors consisting of 24 members, comprising faculty, students, parents and other citizens. In 1970, there was a total of 63 public and private colleges.

The provincial legislature in Ontario set up a system of colleges of applied arts and technology (CAATs) in 1965. The conceptual framework of these CAATs has as its base post-secondary education which does not include university-parallel courses. This particular structural orientation has affected not only the type of courses offered but also the manner in which they are taught. The administration consists of a Board of Governors for each college under a single Council of Regents, and many locally appointed curriculum advisory committees. In 1971, there were in Ontario 20 CAATs (some with two or three branches) involving about 35,000 students and 2,500 teaching staff. In addition, there were four colleges of agricultural technology, three schools of human medical technology, one school of veterinary medical technology, one college of art and Ryerson Polytechnical Institute. (In 1971, the latter became a degree-granting institution.)

It was not until 1969 that Manitoba established a system of community colleges, following a report of the Manitoba Education Research Council. The three existing

\* Based in part on a detailed paper, "The Community College in Canada", by Gordon Campbell (Faculty of Education, University of Lethbridge), in *Universities and Colleges of Canada* (Ottawa: Association of Universities and Colleges of Canada, 1971).

*St. Lawrence College of Applied Arts and Technology, established in 1967, has campuses at Kingston, Cornwall and Brockville in Ontario. In 1971 some 2,000 full-time students were enrolled in 30 post-secondary programs of from one to three years in length, another 2,000 part-time students took advantage of continuing education offerings and more than 500 adults were registered in retraining and apprentice courses.*

*The two-year commercial communications program at St. Lawrence College includes training in advertising and public relations.*

colleges are administered directly by the Department of Colleges and Universities Affairs, with an advisory Community Colleges Council; they do not offer university-level courses.

Saskatchewan had, per capita, a large number of church-related "junior" colleges but recently facilitated their affiliation with the University of Saskatchewan and, in a few cases, transition to secondary-school level. Today three colleges exist, only one of which was an original junior college. Two of these do not offer university-parallel courses. The community aspect is not emphasized; the institutes are managed by an agency of the Department of Education concerned with meeting provincial needs. No boards of governors exist. However, a Community College Association was founded recently in Prince Albert with the objective of establishing a community college.

A system of community colleges was established in Alberta in 1969 by the Colleges Act. The core ingredient of the system is the Alberta Colleges Commission, a board comprising nine members having wide regulatory powers regarding financial and other affairs. The Act is designed to foster both university-parallel and technical programs. In 1971, the community college system consisted of six comprehensive colleges, two institutes of technology, three schools of agriculture, and two private (church-related) colleges.

In 1970, amendments to the British Columbia Public Schools Act categorized all community colleges as comprehensive regional colleges offering university-parallel courses and strengthened, at the same time, province-wide co-ordination of post-high school and adult education. In 1971, the community college system was enlarged by combining some of the provincially operated vocational schools with adjacent regional colleges and operating the others in close integration with the college system. The British Columbia Institute of Technology is not part of the college system and continues to function as a provincially operated institution. In 1971, there were in British Columbia, 10 regional colleges, one city college, two private (church-related) colleges and one institute of technology. Two agencies function between the College Council and the government.

A great deal of discussion is taking place in Canada today regarding the variable patterns of community colleges, raising many so far unanswered questions in relation to structure and function. However, an ideal type is tending to emerge which includes: a college open all year with a 14-hour daily schedule; a wide choice of teaching and learning strategies; a faculty that emphasizes teaching standards; more emphasis on courses in which there are no formal grades; the abolition of the concept of failure in the learning process; more attention to work-study programs; greater significance in out-of-class learning relative to that in the formal classroom; and representation of faculty and students on administrative bodies.

Very clearly the sweep of the community college system across the country is profoundly affecting Canadian tertiary education, exposing fascinating paths, as yet unexplored. Even in their infancy, community college structures are ordering and patterning an extraordinarily important segment of tertiary education in Canadian society today.

### **Structures for Co-ordination and Integration**

As a result of the large and rapid expansion of tertiary education since 1960, there has been an obvious need for old and new structures to foster co-ordination and integration for and among these institutions. As pointed out earlier, the great increase in financial support demanded mechanisms that would allow for a regular flow of funds to permit planning and orderly development. The Federal Government created, in 1966, an Education Support Branch in the Department of the Secretary of State to facilitate its role in this process of financially assisting the provinces in the discharge of their post-secondary educational responsibilities. Utilizing the Education Support Branch as an instrument for its programs, the Federal Government instituted, in 1967, federal-provincial fiscal arrangements to transfer funds for tertiary education to the provinces in a systematic fashion. In addition, new provincial government agencies, an increasing number of university associations, new community college associations, and other co-ordinating mechanisms exist. These are discussed below.

**Provincial Government Agencies.**—Partly because of increasing rationalization, the traditional separation of non-university from university education is becoming blurred in many parts of Canada (certainly for administrative purposes) and this is reflected in new government structures. For example, a relatively recent phenomenon of great importance is the development of grants commissions, boards and departments which concern

themselves with the range of post-secondary education. Grants commissions, as mechanisms of control in tertiary education in Canada, are patterned after the United Grants Commission of the United Kingdom, but wide variations exist. A panorama of such commissions, boards and departments is presented in the following paragraphs.

In Prince Edward Island, a Grants Commission on Post-Secondary Education was established in 1969. In Nova Scotia, a University Grants Committee was appointed in 1963. In 1967, a New Brunswick Higher Education Commission was appointed which has jurisdiction over universities, colleges, teachers' colleges and post-secondary technical schools. During 1971, the recommendation of the commission investigating Maritime union for a single grants commission for all post-secondary education was adopted by the three provinces. It is expected that this new unifying element which will co-ordinate all post-secondary education in the Maritime Provinces will be in operation in 1972 or 1973.

Ontario established a permanent Committee on University Affairs in 1964. Manitoba has operated with a Universities Grants Commission since 1967; and in Alberta there are two Commissions, one which concerns itself with university and the other with college education. The Academic Board of British Columbia has a responsibility for all post-secondary education but concentrates largely on the regional colleges; an Advisory Board on Finance in British Columbia makes recommendations regarding the dividing of government grants among the universities. In Newfoundland and Saskatchewan (each of which has only a single university) the universities negotiate directly with their governments and not through intermediary commissions.

As post-secondary education has expanded, it has placed increasing demands on the resources of provincial governments. To ensure that the continued growth of this level of education meets the needs of the population it is designed to serve and also to provide tertiary education with a voice in cabinet deliberations, some provinces created independent departments within their departments of education to serve this purpose. Thus, there is now a Department of Colleges and Universities in Ontario; a Department of Colleges and Universities Affairs in Manitoba; and a Department of Advanced Education in Alberta. In Saskatchewan a second department of education has been announced. Quebec has created two directorates, one of which is responsible for universities and the other for colleges. British Columbia has created a new position under the Supervisor of Post-Secondary Services called Co-ordinator of Post-Secondary Services; the Supervisor is directly responsible to the Deputy Minister.

All provinces have now established administrative structures for dealing with a level of education which, less than 20 years ago, they were content to leave largely in the hands of the private sector. The diversity between the various provincial administrative and governmental structures is reflected to some extent in the roles assigned to the institutions, and in particular to the non-university institutions.

**University Associations.**—Canadian universities have co-ordinating associations at the national, regional and provincial levels. Nation-wide alliances include the Association of Universities and Colleges of Canada and the Canadian Association of University Teachers. A national student organization—the Canadian Union of Students—existed up to 1969 when it disbanded. The universities of the Provinces of Newfoundland, New Brunswick, Nova Scotia, and Prince Edward Island belong to an Association of Atlantic Universities. In addition, there is a committee of presidents of universities of New Brunswick, a *Conférence des recteurs et des principaux du Québec*, a Council of Ontario Universities, and an informal organization of presidents of universities of the western provinces. These organizations of universities (or their presidents) provide a medium for communication, facilitate co-operation among the universities themselves, and negotiate with government agencies identified above.

**Community College Associations.**—Concomitant with the development of provincial community college systems have been province-wide alliances of college personnel. Formal and informal structures that have emerged vary widely in scope, membership and effectiveness.

In British Columbia, college principals meet informally, and students unite in the British Columbia Community College Students' Association; in addition, there is a College Faculties Federation of British Columbia. The Alberta Association of College Administrators consists of board members and administration personnel of all colleges in Alberta; an Alberta Association of College Faculties exists, which is a professional organization for college teaching personnel.

Ontario has the following college personnel structures: a student's organization; the Ontario Federation of Community College Faculty Association (which in 1969-70 was in dispute with the Civil Service Association of Ontario regarding faculty bargaining rights); a Committee of College Presidents; and an Association of Colleges of Applied Arts and Technology which sponsors an annual conference.

In Quebec, the following structures exist: two associations concerned with over-all college organization; three organizations concerned with faculty, and a variety with students; and an active association with a full-time secretariat, called *Fédération des Collèges d'enseignement général et professionnel*. Although the *Fédération* is independent of the Quebec government, it is supported by the government with a grant of \$5 per student. An estimated \$250,000 aids research and organization. In addition, private colleges are members of the *Association des Collèges du Québec* which maintains liaison with the *Fédération des Collèges d'enseignement général et professionnel*.

In May 1970, the Canadian Association of Technical Administrators proposed a new constitution and changed its name to the Canadian Association of Community College Administrators.

In 1967 the Kellogg Foundation granted \$200,000 to the Canadian Association for Adult Education (CAAE) to explore the possibility of developing a national bilingual college association or an agency useful to all levels of college organizations across the country. The CAAE established a Canadian Commission for the Community College and appointed to its board of directors, students, local college board members, faculty and administrators; this Commission was later superseded by the Association of Canadian Community Colleges, with headquarters in Montreal.

**Other Co-ordinating Mechanisms.**—In addition to the above-mentioned commissions, boards, departments and associations designed to facilitate the provision of tertiary education, other co-ordinating structures exist. In Western Canada, the Inter-provincial Committee on University Rationalization (IPCUR) deals with integration and co-ordination in higher education in Alberta, Saskatchewan and Manitoba. IPCUR offers a forum for discussion and is the recipient of recommendations from universities and individuals.

A national advisory structure for co-ordination of research was established two years ago in the form of the Tri-Council Committee. This Committee is composed of a few senior members from the National Research Council (physical and natural science research), the Medical Research Council (medical research), and the Canada Council (human and social science research). The Committee's main function is to keep each Council informed of the others' work. Responsibility for administration, which is rotating among the Councils, is being carried by the Medical Research Council in 1972.

The Council of Ministers of Education, Canada, was established in 1967 to enable the Ministers to consult on matters of common interest and to provide a medium for co-operation among provincial governments in areas of mutual interest and concern in education. Special committees have been created to deal with the range of educational topics which

are of national concern. One important committee is that which concerns itself with post-secondary education. A permanent secretariat was established which is located in Toronto.

In 1971 a Minister of State for Science and Technology was appointed by the Federal Government.

The Education Division of Statistics Canada is a national agency which acts in a co-ordinating and integrating role. The collecting, storing, disseminating and analysis of national education statistics at all levels serve to link the various isolated educational patterns across Canada, into a total framework. This work will be strengthened by a computerized, national integrated information system which the Education Division has begun to develop in collaboration with a network of educational institutions across Canada.

The heterogeneity and complexity of Canadian society is mirrored by the educational structures designed to serve the variety of needs perceived by each of the provinces. However, it is becoming increasingly apparent that despite the differences which have been institutionalized there are enough common educational needs of the various regions of Canada to justify serious efforts at some form of rationalization. Over the coming decade, the co-ordinating developments referred to earlier are likely to be speeded up as enrolments, costs and interprovincial mobility increase.

## **Section 2.—Administration and Organizational Structure of Education**

### **Subsection 1.—Responsibility for Education**

#### **Federal Responsibility**

Canada is a federal state, in which responsibility for the organization and administration of public education is exercised by the provincial and territorial governments. The Federal Government is directly concerned only with schools for Indian children which are administered by the Education Branch of the federal Department of Indian Affairs and Northern Development, with schools for children of servicemen operated in Europe by the Department of National Defence, and with schools for inmates of federal penitentiaries. In addition, the Federal Government finances re-training of adults, provides financial support to the provinces amounting to at least 50 p.c. of operating costs of post-secondary education, participates to a considerable extent in informal education, and makes grants-in-aid for research personnel and equipment in universities (see pp. 394–396).

#### **Provincial Responsibility**

Each of the ten provinces and the two territories has the authority and responsibility for organizing its education system as it sees fit and, as a consequence, organization, policies and practices differ from one to the other. Each has a department of education or of education and youth, headed by a minister who is a member of the Cabinet in the case of the provinces or responsible to the Council in the case of the territories; Ontario has a Department of Colleges and Universities, Manitoba a Department of Colleges and Universities Affairs and Alberta a Department of Advanced Education. Each provincial department is administered by a deputy minister who is a professional educationalist and a public servant. He advises the minister, supervises the department and gives a measure of permanency to its education policy and, in general, carries out that policy and is responsible for the enforcement of the Public School Act. The department of education usually also includes a chief inspector of schools and a staff of local inspectors, as well as directors or supervisors of curricula, technical education, teacher training, home economics, guidance, physical education, audio-visual education, correspondence instruction, adult education, other sections according to the needs of the particular province, and technical personnel and clerks.

Other provincial departments having some responsibility for operating school programs include departments of labour which operate apprenticeship programs, agriculture departments which operate agriculture schools, departments of attorney-general or of welfare which operate reform schools, and departments of lands and forests which operate forest ranger schools.

From the beginning, each department of education has undertaken, among other things, to provide: (1) inspection services to ensure maintenance of standards; (2) teacher certification; (3) courses of study and lists of prescribed or approved textbooks; (4) financial assistance to local authorities in the construction and operation of schools; and (5) guidance regulations for trustees and teachers. In return, each department requires regular reports from the schools. When first introduced, government grants to schools were based on such factors as number of teachers, enrolment, days in session and attendance. Somewhat later, special grants were introduced in most provinces to meet a variety of expenses, such as the construction of the first school, the organization of special classes, the transportation for pupils, school lunches, and other contingencies. A number of provinces made provision for equalization grants and now most of them have a foundation program of one kind or another.

The work of the departments of education has grown considerably. Many have expanded their services in the fields of health, audio-visual aids, art, music, agriculture, sociology, special education, correspondence courses and pre-vocational and trade courses. At the same time there has been an increasing delegation of authority to local boards and school staffs. One illustration of this tendency is a reduction in the number of departmental (external) year-end examinations. Few provinces now provide for more than one or two such examinations—at the end of the final and, in some cases, at the end of the second last year of the secondary school course. Another illustration is the increasing use of lists of approved textbooks from which local authorities may make their own choice, instead of lists of prescribed texts. Courses of study are now seldom planned by only one or two experts in the department; instead, they result from conferences and workshops including active teachers and other interested individuals or bodies. In most provinces "curriculum construction" is considered to be a continuous procedure.

**Elementary and Secondary Schools.**—In all provinces schools are established and operated by local education authorities functioning under the terms of a Public School Act and held responsible to the provincial government and resident ratepayers for the actual operation of the local schools. Through the delegation of authority, education has become a provincial-local partnership with the degree of decentralization reviewed intermittently.

Elementary and secondary schools may be classified as publicly controlled or private. The publicly controlled schools, sometimes referred to as "public" schools (including separate schools), encompass those that operate under the provincial school system with locally appointed or elected school boards. Private schools generally either provide a similar curriculum to that of publicly controlled schools or concentrate on business, commercial, trade, technical and correspondence courses, or provide a combination of such courses.

Under recent amendments to provincial legislation, school units have been consolidated and consequently enlarged in all provinces. With the growth of cities and towns and of educational facilities and requirements, the old-time three-member local school board became inadequate as an administrative structure. The original school boards remained as units but provision was made for urban school boards consisting of more members, responsible for both elementary and secondary schools and for providing the necessary staff, buildings, equipment and transportation. The local boards still in existence in some districts have limited powers and duties, usually functioning in an advisory capacity and looking after buildings and grounds.

The numbers of active independent public school boards and school trustees in each province and the Mackenzie District of the Northwest Territories, as of January 1970, were:—

Province or District	School Boards Composed of Trustees Who Are—

<sup>1</sup> Does not include remote school districts. serving elementary only.

<sup>2</sup> Includes some small rural boards administering elementary only.

**Community Colleges.**—Although there are some privately operated colleges, the provinces are partially to totally responsible for co-ordinating, regulating and financing community colleges and related institutions. Some provincial governments completely finance these colleges while others do so in part. Similarly, the degree of local autonomy given the colleges varies by province.

Since 1960, Alberta, British Columbia, Ontario and Quebec have established new community college structures. In Alberta, the provincial agency is the Alberta College Commission composed of nine members, all appointed by the government. In British Columbia, an advisory board—the Academic Board—serves both universities and colleges and consists of nine members, six appointed by the university and three by the provincial government. Ontario has a provincial board—the College of Regents—consisting of 15 members appointed by the Minister of Education. In Quebec, the Department of Education is responsible for many agency functions. The composition of the board of governors varies by province. For example, in Quebec, it consists of 19 members including representatives from the university, the principal and academic dean, students, and parents of students.

**Universities.**—There are distinctive differences in Canadian systems of higher education. The universities and colleges long ago established by the French were based on the culture of Old France and were administered by Roman Catholic groups, either religious or secular. These French-language institutions still retain their traditional characteristics but are now conforming almost entirely to the North American system of administration. The largest group of universities and colleges in Canada are administered by English-speaking staff and offers instruction in English. Apart from those founded and still administered by various Protestant religious groups, these institutions are mainly non-denominational, having been established through private subscription or by the provincial government concerned.

Civil legislation regarding the establishment of new institutions or changes in existing ones is usually enacted by provincial legislatures, except for federal military colleges and a few institutions originally established by Act of the Canadian Parliament. Once an

institution is legally chartered, control is vested in its governing body, the membership of which is indicated in the charter. The line of authority runs from the board of governors through the president (or recteur) to the senate and deans and the faculty as a whole. The composition of the board of governors varies according to the type of institution. Provincial universities normally have government representation; church-related institutions have clergymen. Nearly all boards have either direct representation from the business community, alumni associations and other organizations, or are advised by these groups through advisory boards or committees. A recent phenomenon has been the inclusion of students on administrative bodies. The size of the board varies from a very few to over sixty. It has ultimate control of the university and normally reserves to itself complete financial powers, including the appointment of the president and most other staff. On occasion there will be faculty representation on the board and recently there have been attempts on the part of faculty groups of many institutions to obtain greater representation on the boards of governors. Responsibility for academic affairs is usually delegated to the senate. Composed mainly of faculty members, although there may also be alumni and representatives of non-academic groups included, the board is responsible for admission, courses, discipline and the awarding of degrees.

*The Sir Charles Tupper Building is one of the several additions that have been made during the past five years to the campus of Dalhousie University in Halifax. This building houses the faculty and departments of medicine.*

## Subsection 2.—Levels of Education

### Pre-grade 1, Elementary and Secondary Education

Pre-grade 1 enrolment in schools offering elementary-grade instruction is neither compulsory nor universal throughout Canada, although kindergartens for five-year-olds are part of the elementary school system in most large urban centres in most provinces. Recently, an increasing number of kindergartens are accepting four-year-olds. There are also some kindergartens which are run by private individuals and which accept children of three to five years of age.

Each September, most Canadian children of age six enter an eight-grade publicly controlled (including separate) elementary school. At about 14 years of age, a significant

proportion of those who entered grade 1 move on to a four- or five-year secondary school. Less than 3 p.c. of the primary and secondary students in Canada attend private schools.

The 8-4 plan leading from grade 1 to university was for many years the basic plan for organizing the curriculum and schools, other than that of the Catholic School Boards of Quebec. This plan, although still followed in some school jurisdictions, has been modified from time to time in all provinces, cities or groups of schools. There are a number of variants to be found in Canada at present: the addition of one or even two years of secondary schooling; the introduction of junior high schools, changing the organization to a 6-3-3 or 6-3-4 plan; or again, the combining of the first six years of elementary school into two units, each designed to reach specified goals during a three-year period. In the recently established community colleges, the last one or two years of high school and the first one or two years of college are offered.

At the secondary level, three programs can frequently be distinguished—the university entrance course, the general course for those wishing to complete an academic type of program before entering employment, and vocational courses for those wishing to enter skilled trades or pursue further training in the technological fields.

Secondary schools were at one time predominantly academic and prepared their pupils for entry into university. Until recent years, vocational schools were to be found only in the large cities, although schools in some of the smaller centres did provide a few commercial and technical subjects as options in the academic curriculum. Today, in addition to the vocational schools and the regular secondary schools that provide commercial courses, there are increasing numbers of composite and regional high schools offering regular academic subjects and vocational training in such courses as home economics, agriculture, shop-work and commercial subjects. Occupational or pre-employment classes, set up as part of the total program in regular vocational schools, require from one to three years or even four years for completion, and are terminal in nature. In addition to this type of ungraded course, some schools offer special, ungraded one- or two-year vocational programs to students who have completed the final years of high school. Some secondary schools also provide occupational programs for students who have shown no particular aptitude for an academic education or for training in a specific trade. These students learn no specific trade until perhaps their third year of studies. By remaining in school longer, however, they adjust more easily to conditions in the work world.

**Special Education.**—Interest and developments are increasing in the education of exceptional children in Canada. Special education for gifted children at both elementary and secondary levels takes the form of innovative, enriched and accelerated programs. New types of special classes are sometimes started by parents of children with a common disability, who band together to provide help and show the need for such service, which may then be taken over by public bodies. Progress in providing such education varies from province to province. It is most commonly found in the city school systems. There are six schools for the blind, 16 schools for the deaf, and a number of training schools for mental defectives. Special classes are conducted in tuberculosis sanatoria, mental hospitals and reformatories.

## Tertiary Education

**Community Colleges and Related Institutions.**—Community colleges (colleges currently listed by the Canadian Commission for the Community College as falling within the purview of that organization) and related institutions (a number of private colleges, the Nova Scotia Agricultural College, the Ontario College of Art, and Lakehead University\*) include: the College of Fisheries, Navigation, Marine Engineering and Electronics, and the College of Trades and Technology in Newfoundland; Holland College in Prince Edward Island; two institutes of technology, an agricultural college and the land survey institute in

\* Enrolments in technology programs offered by this degree-granting institution have been included, since their inception, with reports on Canadian institutes of technology and related institutes.

Nova Scotia; two institutes of technology in New Brunswick; collèges d'enseignement général et professionnel, technical institutes and related institutions, and private schools in Quebec; regionally based colleges of applied arts and technology, four colleges of agricultural technology, an art college, and Ryerson Polytechnical Institute in Ontario; three community colleges in Manitoba; two institutes of technology and St. Peter's College in Saskatchewan; three church-related institutions, two institutes of technology, five public colleges, and three agricultural and vocational colleges in Alberta; and a number of regional colleges, an institute of technology, a district college, a private college, and a church-related institution in British Columbia.

The minimum qualification for entrance into first year post-secondary programs is high school graduation or equivalent standing. Many institutions also offer a qualifying-year program to those applicants who do not meet the academic requirements; some institutions also admit those applicants ordinarily ineligible for admission by assessing them as "mature" students.

Students in community colleges receive post-secondary vocational training and, upon successful completion of a two- or three-year program, are granted a Diploma of Technology and Applied Arts, or some equivalent certificate. After course termination, students are qualified to work at a semi-professional level between that of the university-trained professional and that of the skilled tradesman. In addition, students in some community colleges can take the first one or two years of a university equivalent program and transfer to a university to complete their senior years.

Courses offered at community colleges and related institutions are very diverse, including applied arts, business and commercial, technological programs (aeronautical, architectural, chemical, etc.), and university transfer programs. The full complement of courses is not given in every province.

**Nursing Education.**—Traditionally, nurses' (R.N.) diploma courses have been conducted in hospital schools. In 1964, Ryerson Institute of Technology became the first non-hospital institution in Canada to include nurses' diploma training and since then there has been a definite trend toward giving the theoretical part of the instruction in community colleges and providing only the practical instruction in the hospitals. Several provinces offer nurses' training in non-hospital schools: Quebec, Ontario, Saskatchewan, Alberta and British Columbia.

Another trend in nursing education is a shortening of the course from three years to two, except in Quebec where the three-year training period will remain (according to present plans) with the first two years spent in CEGEPs and the third in hospital to gain "poly-technical" training.

In addition to nursing education solely at the post-secondary non-university level, students receiving their nurses' (R.N.) diploma in hospital schools may take an additional one- or two-year course or longer (depending on the institution) offered by some universities to qualify for a degree. Further, undergraduate and graduate degrees are offered to students who enter university directly from secondary school.

**Teacher Training.**—All provinces require candidates for elementary school teacher certificates to have high school completion or better, with at least one year of professional training in a faculty of education or a teachers' college. The training usually consists of professional and academic courses and some time spent in practice teaching. High school teachers are generally university graduates who have taken an additional year of professional training in a college of education, or who have graduated with a degree in education. The trend is for the government departments of education to give the universities responsibility for the training of elementary school teachers as well as secondary school teachers. In Newfoundland, Prince Edward Island, Manitoba, Saskatchewan, Alberta and British Columbia, all teacher training is conducted at the university where three or four different

courses leading to a degree are provided. About three quarters of the time is devoted to academic courses in arts and science and the remainder to professional courses.

Although the universities participate in the training of elementary-secondary teachers, teachers' colleges still exist in Nova Scotia, New Brunswick, Quebec and Ontario but are generally disappearing as independent institutions. In New Brunswick, all teacher training will take place in universities by 1972-73; in Nova Scotia, there is no plan to integrate its one teachers' college with the university, but an optional third year will be included in the program which currently requires two years after senior matriculation. The emerging pattern in Quebec is for students to first complete the two-year academic program in a collège d'enseignement général et professionnel (CEGEP) and then go to university for teacher training. Sixteen écoles normales have been absorbed by other institutions since 1969-70 and only five were in operation in 1971-72.

In Ontario in 1969-70, there were 35 normal schools and teachers' colleges, 45 faculties or colleges of education and two institutes of technology engaged in teacher training, with a total enrolment of 46,082. Most teachers in these schools are paid according to a local salary schedule based on years of training and experience. They contribute to a provincial superannuation scheme and are members of a provincial professional organization.

Two teachers' colleges in Ontario were integrated with the university system in 1969-70; it is expected that within a short time only about six colleges will remain and that enrolment in them will decline. This expected decline is based on the fact that, for almost the first time in the past ten years, some newly graduated teachers have been unable to find employment and also to the fact that admission requirements of teachers' colleges have been raised from grade 13 to completion of first year of university. It appears that only persons with a university degree will be accepted for teacher training in Ontario by 1973-74.

**University Education.**—This level of education includes universities and colleges. A university may be defined as an institution of post-secondary education, professional training and research which grants first and advanced degrees; a college is an institution with usually only one faculty granting a first degree but is more likely to be affiliated with a degree-granting university. To qualify for entrance into university, students must have high school graduation (11 to 13 years of schooling depending on the province) or equivalent standing. An applicant who lacks the usual academic qualifications may gain admittance to university after reaching a certain age by passing entrance examinations and being assessed as a "mature" student.

Courses of instruction ranging in duration from three to five years lead to a bachelor's degree in arts, pure science and such professional fields as agriculture, engineering, business administration, pharmacy, nursing and education. Courses in law, theology, dentistry, medicine and some other fields are longer—usually requiring for admission, completion of part or all of a first-degree course in arts or science. For those pursuing graduate studies and research, the second degree is normally the master's or licence (at least one year beyond the first degree) and the third is the doctorate (normally requiring at least two additional years beyond the second degree).

**Adult Continuing Education.**—A relatively new phenomenon in Canadian education is the growth of continuing education, sometimes referred to as adult or recurrent education. The provision of evening and summer extension and correspondence courses in a wide variety of subjects is now an important part of the education system. Diversified course offerings for adults through correspondence and extension courses are given by school boards, provincial government schools, private trade schools and business colleges, business and professional associations, community colleges and related institutions, and universities. As a result of this activity in adult education, men and women who find it impractical or impossible to attend full-time or regular classes because of business and family responsibilities, illness or inaccessibility to schools are able to pursue accreditation

at diverse educational levels or advance personal interests. Correspondence-course study offers instruction to children and adults confined to home or hospital and to inmates of Canadian correctional institutions.

School boards offer courses leading to matriculation, as well as courses involving individual and community interests. A recent survey of school boards reveals that approximately 175,000 adults are taking courses of study leading to high school completion. In addition, about 274,000 adults are enrolled in a host of general-interest courses. In community colleges, courses for adults include home economics, agriculture, business administration, fine arts and a number of technologies as well as courses in such trades as hairdressing, automobile mechanics, plumbing and construction. Universities provide credit and non-credit courses for adults on a part-time basis. Adults can gain credits toward a degree, diploma or certificate, can update their qualifications, or can pursue general interests while still fulfilling their business or homemaking responsibilities. Part-time enrolment at this level is increasing at a faster rate than full-time enrolment.

*Ontario Hydro's Nuclear Training Centre at Rolphton is designed to train the man for the job. The Centre, which has trained well over 1,000 men since its inception in 1963, has classroom, laboratory and workshop facilities for an enrolment of about 180 students.*

### **Subsection 3.—Differential Characteristics of Provincial and Territorial Education Systems**

The following paragraphs outline the administration and organization of education in all provinces and territories, emphasizing the important changes that have occurred in recent years.

**Newfoundland.**—Until recently, the system of education in Newfoundland, originally established in 1874, was strictly denominational. As a result of the recommendations of a provincial Royal Commission on Education and Youth set up in 1964, consolidation of the school systems of the major Protestant denominations has taken place but the Roman Catholic, Pentecostal and Seventh Day Adventist denominations still operate their own schools. Further reorganization occurred in 1969 when 300 denominational boards operating schools in the province reduced the number of districts to 35. The Pentecostal Assemblies and the Seventh Day Adventists each operate one "school district" which, in theory

if not in practice, embraces the whole province. The largest single denomination in the province, Roman Catholic, continues to operate its own system but recently consolidated the number of boards from over 100 to 15.

Pre-grade 1 enrolment in Newfoundland is not universal or compulsory but, with the construction of larger more centralized elementary schools, increasing numbers of five-year-olds are being admitted for instruction in kindergarten classes. The number of children in nursery schools and kindergartens run by private individuals remains quite small.

There are two major patterns of school organization in the province—elementary schools (kindergarten and grades 1–6) with central high schools (grades 7–11), and elementary schools (kindergarten and grades 1–8) with regional high schools (grades 9–11). There are only a few junior high schools (grades 7–9) in the province. The province is served by a network of 11 district vocational schools; no vocational instruction is given in the secondary schools.

Tertiary education includes both university and post-secondary non-university programs. The Memorial University in Newfoundland offers degree courses in arts and sciences, commerce and business administration, education, engineering and applied sciences, and certificate courses in public administration and banking. Post-secondary non-university education is offered at the College of Trades and Technology and the College of Fisheries, Navigation, Marine Engineering and Electronics. Nurses' (R.N.) diploma courses are conducted exclusively in hospital schools.

**Prince Edward Island.**—The trend in Prince Edward Island, as elsewhere, is away from small educational units and consolidation of such units is under way.

Kindergarten classes are not normally a part of the publicly controlled school system; enrolment in nurseries and kindergartens operated by private individuals is higher than in pre-grade 1 classes in the school system but is still quite small.

The major pattern of school organization in Prince Edward Island until junior matriculation is—elementary school (grades 1–6), junior high school (grades 7–9) and senior high school (grades 10–12); an additional pattern consists of elementary school (grades 1–8) and high school (grades 9–12). As in other provinces, Prince Edward Island is working toward a system that will eliminate "grade" promotion in favour of "subject" promotion, using a "credit" system. Five per cent of the elementary and secondary pupils receive their entire education in French and French is taught as a second language in all other schools.

The province is served by a network of 15 regional high schools offering academic programs from grades 9–12 and a one- or two-year business education course. Two vocational high schools provide a variety of four-year trade courses—a one-year orientation program followed by three years of training in a specific trade concomitant with academic instruction in language, mathematics and science.

In addition to the hospital schools of nursing, the Prince Edward Island School of Nursing, the first non-hospital school to be established in the province, offers a nurses' (R.N.) diploma program. Two new institutions were opened in Charlottetown in 1969—the University of Prince Edward Island which replaced the former Prince of Wales College and St. Dunstan's University, and Holland College which offers post-secondary vocational training.

**Nova Scotia.**—The Educational Assistance Act and certain amendments to the Education Act, both passed by the provincial legislature in 1968, enabled municipal units of an amalgamated area, in co-operation with the Minister of Education, to decide upon the composition of an amalgamated school board.

Nova Scotia is the only Atlantic Province that provides for the enrolment of five-year-old children in publicly controlled schools; perhaps as a consequence, enrolment in private nurseries has increased only slightly in recent years.

The predominant grade organization in this province is—elementary school (primary and grades 1–6), junior high school (grades 7–9), and senior high school (grades 10–12). There are a few variations in this basic school pattern, such as primary–grade 6, and grades 7–12, or primary–grade 9, and grades 10–12. In 1969, a modified junior high school program was authorized which gives students of average or above-average standing extra instruction in one or more subjects. High school graduation is at either the grade 11 (junior matriculation) or the grade 12 (senior matriculation) level, although enrolment in the latter is not universal in this province. As a result of revisions in the school system since 1966, 13 regional vocational schools replaced the county vocational schools. Students now attend regional vocational schools for occupational training since the secondary schools provide only business and commercial programs.

In 1969, authority was given for the award of high school equivalency diplomas to adults who had not completed high school but had improved their educational standing through job experience or informal training. Such diploma is issued on the basis of a series of tests, developed and validated over a 25-year period by the Commission on Accreditation of the American Council on Education; Nova Scotia is the first Canadian province permitted to use these tests.

Nova Scotia has two institutes of technology offering trade-level and post-secondary vocational courses, an agricultural college providing post-secondary terminal and university transfer programs, a land survey institute, and a bilingual community college which was opened in 1970 to serve the Acadian population. There are several universities and colleges offering degree programs in many disciplines. Teacher training is given in the one teachers' college and degree programs in education are offered in five universities—Acadia, Dalhousie, Mount Saint Vincent, St. Francis Xavier and St. Mary's.

**New Brunswick.**—By authority of the Schools Act, 1966 which became effective on Jan. 1, 1967, 422 school districts in New Brunswick were replaced by 33 enlarged districts. The province is divided into seven regions, each administered by a regional superintendent, and each region has from four to six districts with enrolments of between 11,500 and 34,000 pupils. Schools are strictly non-denominational. District trustees range in number from nine to 15, some elected and the remainder appointed by the Lieutenant-Governor in Council from among residents eligible to serve.

Pre-grade 1 classes are not offered in the publicly-controlled school system, except in unusual or "experimental" circumstances. Enrolment in private nurseries and kindergartens is also low in proportion to number of five-year-olds in the province.

The province has a 12-year system of public education, to junior matriculation. The most common patterns of school organization are: elementary school (grades 1–6), junior high school (grades 7–9) and senior high school (grades 10–12); and elementary school (grades 1–6) and high school (grades 7–12). Vocational courses are taught within the framework of the secondary school system and are taken concomitantly with academic instruction.

The New Brunswick Institute of Technology in Moncton and the Saint John Institute of Technology offer post-secondary vocational and technical programs. Teachers' colleges still remain in New Brunswick although there is indication that they will soon be integrated within the university system. This province has four universities offering a variety of degree programs.

**Quebec.**—In 1964, the Quebec Government, acting on recommendations of the provincial Royal Commission on Education (1961–64), passed legislation (under Bill 60) establishing a new administrative structure for the school system in that province; the Ministry of Education replaced the former Departments of Youth and of Public Instruction. Today, in addition to the Minister and Deputy Minister, the structure of the Ministry includes two Associate Deputy Ministers—one for the Catholic sector and one for the non-Catholic sector. This change of system required large increases in education expenditures

to finance the building of new schools and to acquire additional teaching personnel and materials. There are 55 French and eight regional school boards throughout the province.

Kindergarten admitting five-year-olds is now part of the school system. Registrations rose from 17,000 in 1962-63 to an estimated 118,690 in 1969-70, about 6,900 of whom were in pre-grade 1 classes in private elementary schools, and 803 were in Indian schools.

Elementary education, intended for pupils aged six to 11, is given in publicly controlled schools operated under the direction of local school boards. Since the autumn of 1968, pupils are enrolled in the first grade only if they have reached the age of six by Oct. 1. The new system calls for six years of elementary school, five years of secondary school and a collegial level to be taken in post-secondary non-university institutions. Another emerging trend is a composite course with graduated options and promotion by subject matter.

The Federal Department of Indian Affairs and Northern Development assumes full responsibility for the education of Eskimo children living in northern Quebec, and uses the curriculum established by the Ministry of Education of Quebec.

Collèges d'enseignement général et professionnel (CEGEPs), inaugurated at the beginning of the 1967-68 school year, replaced many of the former classical colleges, normal schools, schools of nursing and technical institutes. These colleges, currently numbering about 40, admit students graduating from grade 11 and offer three-year terminal technical programs and two-year academic programs which are pre-requisite for university entrance. Private or classical colleges offer the equivalent of the two-year university transfer program offered in the CEGEP, at the end of which successful students receive a *diplôme d'études collégiales*. Students may, however, continue at these establishments and work toward a degree granted by the university to which the college is affiliated.

In 1969-70, there was only one English-language CEGEP in operation, although two of the French-language colleges provided some programs in English. Other English-language colleges are planned but, in the meantime, English-language universities provide two college years preceding the three-year university program. In 1969-70, the number of students that may have followed the academic program at an English-language CEGEP, had schools been in existence, were enrolled as follows: McGill University 2,412, Sir George Williams University 1,586 and Bishop's University 261. In addition, two English-language non-degree-granting colleges whose faculties of arts are affiliated with the Université de Montréal, offer the equivalent two-year CEGEP programs.

Teachers' colleges still exist in Quebec but the trend is for teacher training to be given in the universities after completion of the academic program in the CEGEP.

There are several universities and colleges located in Quebec that offer a wide variety of degree, diploma and certificate programs.

**Ontario.**—Under recent amendments to the Ontario School Act, county districts have replaced former individual units that were administered by three-member boards of trustees. The larger cities, such as Toronto and Ottawa, are excluded and operate their own school systems. Roman Catholic schools are given a choice. In most of Ontario the separate administration of elementary and secondary schools has been abolished and these schools are now administered by the same board. With each county administered by one board, there has been a drastic reduction from thousands of districts to about 200. An important amendment to the Act in 1969 provides for schools for trainable retarded children to be established under the jurisdiction of a special divisional board of education.

Ontario has a 13-grade system (senior matriculation) with provision for kindergarten and pre-school enrolment. The predominant pattern of school organization is—elementary school (kindergarten, grades 1-8) and secondary school (grades 9-13). A variation in this organization is the 6-3-4 pattern—elementary school (kindergarten, grades 1-6), junior high school (grades 7-9) and senior high school (grades 10-13).

One of the latest developments is the employment of a "credit system" to cover the former grades 9-12 leading to the secondary school graduation diploma. This will provide more flexible schedule patterns with a view to greater freedom of student choice within an expanding range of subject offerings, even to the creation of "individual timetables" for students. A credit is defined as a course successfully completed, normally after 110 to 120 hours of scheduled time. The diploma (grade 12 standing) is awarded after the successful completion of a minimum of 27 credits.

High schools in this province offer double-option trade courses in the science, technology and trades programs, and double-option business courses in the business and commerce programs. There is also a two- or three-year occupational program to which some students may voluntarily return for a fourth year. There are also special one-year commercial and technical programs that follow grade 11 or 12.

In Ontario at the beginning of the 1967-68 school year, the former institutes of technology and the provincial vocational centres were incorporated into colleges of applied arts and technology known as CAATs. These colleges were set up in 20 regions to serve the needs of the communities at both the post-secondary and the occupational levels. While the CAATs were not designed to accommodate prospective university transfer students, the universities do accept first-class graduates from the two- or three-year post-secondary programs into the first and second year degree courses respectively. On Oct. 1, 1971, these institutions became the responsibility of the newly formed Department of Colleges and Universities, as did Ryerson Polytechnical Institute and other related cultural institutions. In addition to the Regional Schools of Nursing, the Ryerson Polytechnical Institute and a few CATTs offer nurses' (R.N.) diploma programs.

Eleven independent teachers' colleges existed in Ontario in 1969-70 but it is assumed that a number of these will soon be integrated with the university system.

There are over twenty universities and colleges in this province offering a diversified program of courses leading to degrees, diplomas and certificates.

**Manitoba.**—As of Jan. 1, 1969, 93 p.c. of public school enrolments in Manitoba came under the administration of 39 unitary division boards responsible for all public elementary and secondary education within their jurisdictions. For the remaining enrolments, division boards are responsible for secondary education and smaller district boards for elementary education. The few non-unitary boards in operation in the 1969-70 school year had the option of amalgamating on a voluntary basis.

Public kindergarten classes are available in most elementary schools in Manitoba. Enrolments have almost tripled in the past 10 years as these facilities have been expanded and the number of children in private nurseries and kindergartens has consequently declined.

There are two major patterns of school organization in the 12-grade system to senior matriculation—elementary (kindergarten and grades 1-8) and high school (grades 9-12), or elementary (kindergarten and grades 1-6), junior high school (grades 7-9) and senior high school (grades 10-12). Increased emphasis is being placed on open-area classrooms, higher qualifications for teachers, and improved curricula. Other innovations in the elementary and secondary schools include: more meaningful curricula for Indian and metis children now incorporated into regular classes; emphasis in health programs in relation to alcohol and narcotics; audio-lingual programs in French and German at grade 10 level; and emphasis on continuous testing to replace formal examinations and on the concept of "independent study" for students in some secondary schools. Final examinations are set and marked under the auspices of the High School Examination Board of Manitoba. Entrance to university requires evidence of Board standing in at least three subjects with school standing acceptable in two other subjects.

In Manitoba, vocational students may take either a pre-employment commercial or industrial program the successful completion of which entitles them to an "academic

*The Ottawa Board of Education's TV production centre produces about 100 shows a year for both local school consumption and distribution outside the Ottawa area, and these together with a library stock of more than 1,000 films and tapes provide a wide range of material to supplement classroom teaching. All Ottawa elementary and most of the high schools are wired for cable.*

transcript". Alternatively, students may complete the university entrance program and continue for an additional year in a special commercial program, or those following the industrial program may spend half their time in the university entrance program. There is also an occupational entrance program commencing at grade 7 and continuing until grade 10 or 11, during which period students receive part of their training on the job in business or industry.

The Manitoba Institute of Technology and Applied Arts and the two vocational centres at Brandon and The Pas were designated as community colleges in the fall of 1969. They are now called Red River Community College, Assiniboine Community College and Keewatin Community College, respectively. These institutions offer vocational courses and although they make no provision for university transfer students, graduates have in some cases been granted transfer credits.

Teacher training is offered only at the university level in this province. Seven colleges and universities are located in Manitoba offering degree programs. The largest—the University of Manitoba—offers a wide range of courses including arts and science, law, medicine, education, applied sciences, architecture and many others.

**Saskatchewan.**—Many schools in the larger centres of Saskatchewan are now offering kindergarten education, although elsewhere in the province such classes are not normally

available. In fact, the proportion of five-year-olds attending pre-grade 1 classes within the publicly controlled school system has increased from about 15 p.c. of the five-year-old population in 1960-61 to 22 p.c. in 1969-70.

The traditional 12 elementary-secondary grades have been replaced by four Divisions, each consisting of three years of school for a student making normal progress. In Divisions I and II, the principle of non-grading, involving the ideas of continuous progress and flexible promotion, has been adopted. Division III programs have been planned to meet the special needs of pupils in the 13-15 age group faced with the problems of emerging adolescence. Division IV is undergoing major changes in the total scope of courses offered and in the content and methods used within particular subject areas. Recent amendments to the Saskatchewan School Act allow for the exclusion from the regular system of non-rehabilitative children. Educable handicapped children attend special classes in regular schools; blind and deaf children between seven and 16 years of age are educated in special schools.

In Saskatchewan, vocational subjects may be taken in the general, industrial arts, commercial or special terminal programs, none of which qualify the student for university entrance. Vocational courses in the high schools were set up with a view to providing a closer articulation between those schools and the technical institutes. Most of the vocational students in grade 9, apart from those in the commercial course, take five shops not associated with any one specific trade; similarly, students in grade 10 may take two shops. The Saskatchewan Institute of Applied Arts and Sciences and the Saskatchewan Technical Institute offer vocational courses only at both levels. These two schools have taken over the total responsibility for the nurses' (R.N.) diploma program, and during 1969-70 there remained only four hospital schools.

St. Peter's College, a church-related institution affiliated with the University of Saskatchewan, offers the first year of the university program for prospective transfer students. The University of Saskatchewan, at both the Regina and Saskatoon campuses, offers degree programs in education. Several universities are located in Saskatchewan offering a wide range of degree programs; the University of Saskatchewan (Saskatoon campus) is the largest.

**Alberta.**—Education in Alberta is under constant review by the province's Commission on Educational Planning, charged with the broad task of predicting what Alberta society will be like educationally, socially and economically during the last decades of the twentieth century. Innovations in recent years in the elementary-secondary level include: extensive experimentation in programs carried out at the local school level; the use of French as the language of instruction during 50 p.c. of the school day in grades 3 to 12 in certain schools; construction of modern buildings incorporating the latest design in instructional facilities; movement toward the semester system and other methods of dividing the school year; and implementation of school television projects. The Province of Alberta is organized into divisions for purposes of education and each division is administered by its own school board.

Kindergarten classes within the regular school system are not offered in this province except in a few experimental cases. A substantial number of children, however, are enrolled in nursery schools and kindergartens operated by private individuals.

The two predominant patterns of school organization in Alberta are—elementary school (grades 1-6), junior high school (grades 7-9) and senior high school (grades 10-12), or elementary school (grades 1-8) and high school (grades 9-12). Alberta operates its secondary schools on the composite or comprehensive principle. Most of the wide range of vocational programs conducted are offered in grades 10-12. In grade 12, some of the vocational courses lead to the granting of 15-20 credits, of which 100 are required for an Alberta High School Diploma.

In the fall of 1971, a new Department of Advanced Education was formed, separate from the Department of Education. This department is responsible for universities, public

colleges, institutes of technology and the agricultural and vocational colleges formerly under the jurisdiction of the Department of Agriculture. The five public colleges, previously known as "junior" colleges, the two institutes of technology and the three agricultural and vocational colleges, all offering vocational programs at the post-secondary level, are now part of the community college system.

Programs at the first- or second-year university level are provided at three church-related institutions—Camrose Lutheran College, the bilingual Collège St. Jean and the Canadian Union College which also offers two-year terminal vocational studies in secretarial science. Nurses' (R.N.) diploma programs are at present given at both hospital schools and three community colleges—Lethbridge, Mount Royal and Red Deer.

One large university—the University of Alberta—has a diversified course-offering including fine and applied arts, arts and science, medicine, dentistry, pharmacy, nursing, household science, engineering and applied sciences, agriculture, library science, law and education. The province also has two medium-sized universities—the University of Calgary and the University of Lethbridge—and three small colleges.

**British Columbia.**—Details of education programs in British Columbia are similar to those of the most advanced programs in the other provinces. Its central organization of divisions and services includes curriculum, instruction, adult education, university and college affairs, research and standards, home economics, correspondence courses, school broadcasts, visual education, technical and vocational education, community programs, Jericho Hill School for the deaf and blind, and examinations.

Some school districts provide kindergarten classes. In 1969-70, about 57 p.c. of the five-year-old population was enrolled in pre-grade 1 classes in the publicly controlled elementary schools and enrolments in privately operated nursery schools and kindergartens were also quite substantial.

British Columbia's former 13-year system of education culminating in senior matriculation is being replaced with a 12-year system but the senior matriculation year is still available in universities, in some of the regional colleges and in some high schools. The predominant pattern of school organization is—elementary school (grades 1-6), junior high school (grades 7-9) and senior high school (grades 10-12). Five of the six programs offered in grades 11 and 12 are vocationally oriented—commercial, industrial, community services including home economics (not specifically labour-force-oriented), visual and performing arts, and vocational. There are a substantial number of pupils enrolled in special classes, such as those for educable retarded, blind or deaf children. In most school districts, the less severely handicapped receive special instruction in regular schools but the more severely handicapped are taught in special schools under government or private operation.

Ten community colleges and the British Columbia Institute of Technology have been established since 1965. The colleges, operated by consortiums of school boards, enable residents of a particular geographic area to take the junior years of university or a terminal vocational course. The Vancouver City College is operated by the Vancouver School Board only, and the British Columbia Institute of Technology, which offers post-secondary vocational programs only, is operated by the Provincial Department of Education. Trinity Junior College is a church-related institution which provides the first two years of university. The Columbia Junior College, a private non-denominational institution located in Vancouver, offers a terminal career course in Fashion Design as well as university transfer programs which are recognized by the University of British Columbia.

In addition to the hospital schools of nursing, the British Columbia Institute of Technology offers the nurses' (R.N.) program and the Vancouver City College provides specific training in psychiatric nursing.

The largest degree-granting institution in the province—the University of British Columbia—has faculties of architecture, law, medicine, applied sciences, education, arts and sciences and others. A major development for the 1970s, based on the report of the Commission on the Future of the Faculty of Education, is the revision of the academic

program and administrative structure of this university's Faculty of Education. Among the 85 recommendations are such innovations as the adoption of a single five-year Bachelor of Education program, introduction of the "teaching associate" idea, a new Master of Pedagogy degree, and student participation in decision-making at the operational level. There are two smaller universities—Victoria and Simon Fraser—in operation in British Columbia and a number of small colleges, most of them church-related.

**Yukon Territory.**—The Yukon Territory School System is administered by the Yukon Department of Education and operated through a superintendent and staff at Whitehorse, appointed by the Territorial Government and responsible to the Commissioner of the Territory. Schools in the Yukon have always been publicly controlled, except for the Federal Indian Residential School at Carcross which closed before the 1969-70 school year. In 1969-70 enrolment in the 23 schools was 4,090.

**Northwest Territories.**—The Northwest Territories school system, consisting of the Districts of Mackenzie, Franklin and Keewatin, is now operated by the newly established Department of Education of the new Territorial Government. The official transfer of responsibility for education from the federal Department of Indian Affairs and Northern Development to the Territorial Department of Education occurred in April 1969 in the Mackenzie District and April 1970 in the Franklin and Keewatin Districts; 58 schools were taken over by the Territorial Department of Education and came under public control. Total enrolment in 1969-70 was 8,192.

The Territorial Department of Education is continuing the work done in the past by the Department of Indian Affairs and Northern Development, and is providing educational opportunities for northern residents equivalent to those enjoyed by citizens in Southern Canada. New schools have been constructed at Edzo, Frobisher Bay, Baker Lake, Cape Dorset, Coral Harbour and Clyde River and an education curriculum has been developed relevant to the cultural heritage of Eskimo, Indian and metis students, who comprise the majority of pupils in the schools. The Department, with the assistance of the Department of Indian Affairs and Northern Development, is initiating the collection of stories and legends of the Dogrib people and a Dogrib grammar and dictionary are being produced.

#### Subsection 4.—Financing Education

Of the total expenditures on education across Canada amounting to \$5,800,000,000 in 1968-69, local governments contributed 26 p.c., provincial governments 45 p.c., the federal government 21 p.c. and the remaining 8 p.c. originated from private sources.

#### Financing Education at the Elementary and Secondary Levels

The magnitude of the elementary-secondary sector of education is most clearly evident when expressed in dollars. In 1968-69 and 1969-70, total expenditures at this level were in excess of \$3,750,000,000 and \$4,250,000,000, respectively, these amounts representing over 65 p.c. of all expenditures for all education in Canada. In the later year expenditure on elementary and secondary education was nearly two and a half times greater than the amount spent by the Department of National Defence.

The actual operation of public elementary and secondary schools is in the hands of the local elected or appointed school boards which determine the budgets and therefore the amount of taxes required for school purposes. In most cases, these taxes are levied and collected for the boards by the municipalities; however, in those areas where there is no municipal organization the school boards have the power to levy and collect taxes for school purposes. In 1968-69, local governments provided 39 p.c. of the cost of operating the public schools, provincial governments provided 51 p.c. and the remainder was obtained from various other sources. Except in Newfoundland, fees are almost non-existent. Four provinces—British Columbia, Alberta, Manitoba and Nova Scotia—pay operating grants

on an equalization formula and thus ensure at least a minimum level of education throughout the province. The standard is determined either in terms of so much per pupil, or from an established salary scale for teachers with a prescribed teacher-pupil ratio, or by some combination of these.

In Newfoundland where municipal organization scarcely exists outside certain larger centres, there are three school-tax areas. In Prince Edward Island where there is no municipal organization outside of the cities of Charlottetown and Summerside, the school boards levy and collect property and poll taxes but the province provides about two thirds of the operating costs. Ontario and Saskatchewan make use of various equalization and incentive grants. On Jan. 1, 1967, the New Brunswick Government introduced a Program of Equal Opportunity under which it assumed full responsibility for public education and other social services. Consequently, in the following year, 98 p.c. of the revenue used for public education was derived from provincial taxes (real property and sales taxes); the remaining 2 p.c. came from miscellaneous sources. Most provinces provide grants for school buildings and equipment, establish loan funds, and guarantee debentures for school purposes and assist in selling them.

**Developments in Financial Information.**—The problems associated with the creation of a financial reporting system which ensures comparability between the provinces and timeliness of output are considerable indeed. However, events have now moved forward to the point where reasonably accurate comparable cost-per-pupil data for each of the provinces at the elementary-secondary level are available. Differences in accounting procedures do create difficulties but, for the most part, can be coped with. It must be remembered that the numbers of students being dealt with in all cases is extremely large, and the expenditure items on which consistency is difficult to achieve across all provinces are always relatively minor in relation to the provincial total.

In the past, reliance was placed entirely on audited statements and published public accounts for all data; this resulted in delays that sometimes exceeded 30 months between the termination of an academic year and the publication of national information on schooling costs in Canada. Happily, this situation is at an end. Provincial departments of education have been extremely co-operative and are now providing budgets and other information which will have the effect of making financial estimates available at the same time as enrolment statistics.

The determination of accurate educational costs on a current basis has enabled the Federal Government to provide significant sums of money (\$50,000,000 in 1970) to the provinces to further the aims of bilingualism and biculturalism. A fixed percentage of the cost-per-pupil of elementary-secondary education is paid to each province, based on their costs, for the amount of minority language education provided and the time devoted to teaching the second language.

The importance of adequate statistics in order to plan and maintain a program of education support cannot be over-emphasized. An excellent data base already exists and it is constantly undergoing a process of refinement and improvement. The use of education statistics in order to establish and maintain programs designed to meet national and regional aims is now a genuine possibility, and could be put to immediate use.

Finance data (along with enrolment and teaching staff statistics) form an integral part of a developing nation-wide information system which was initiated by the Council of Ministers of Education in Canada but has been carried on by the Education Division of Statistics Canada since 1969. In addition, other initiatives have been taken which will have the effect of rounding out the statistical picture. A new survey is being undertaken (late 1971) on school transport which will provide national and provincial data on a number of aspects of this particular education phenomenon, little of which has ever been available. Recent moves in nearly all provinces to consolidate both administrative and education services into large units have resulted in significant increases in pupil transportation services which, it appears, now require from 3 p.c. to 10 p.c. of school board budgets.

### Federal Contributions to Education

Universities and colleges currently receive more than 80 p.c. of their operating funds from the federal and provincial governments. Private schools and colleges are normally supported by student fees, endowment income, gifts and income from sponsoring bodies.

In 1969-70, Federal Government expenditures on education amounted to \$1,329,000,000 including \$530,000,000 transferred to provinces under the terms of the Federal-Provincial Fiscal Arrangements Act. In addition, some \$203,000,000 was spent at the university level and expenditures on non-university post-secondary education, including vocational training, amounted to \$401,000,000. Finally, direct expenditures by the Federal Government on elementary-secondary education and teacher training accounted for \$195,000,000.

Some 60 Federal Government departments and agencies contribute to education in one way or another. As stated previously, the Federal Government has no responsibility for the organization and administration of education. It has, however, a vital interest in the quantity and quality of education, the skills of the population and the extent of scientific research carried on in Canada, realizing the effect of these on the national economy and on individual and social development.

During the past few years, federal support to education has undergone significant change. The total federal contribution to education has increased substantially and the form of this support and the method of its distribution have been altered in certain key areas. The most important of these included the discontinuation of the payment of operating grants directly to universities and the extension of financial support to post-secondary institutions; the assumption by the Federal Government of the full cost of the vocational training of adults under the Adult Occupational Training Act; and the recognition of the need for increased grants for specific research projects undertaken by individual professors and other researchers at universities.

As a result of the federal-provincial conference of October 1966, the Federal Government undertook to provide increased support to education. Recognizing that education is a provincial responsibility, it decided to discontinue payment of operating grants directly to universities and to expand its support beyond university education and include in its program all, or almost all, post-secondary education, i.e., the educational institutions and courses requiring for admission at least junior matriculation, or its equivalent, in each province. The provinces were offered the choice of either a federal grant amounting to \$15 per head of population or 50 p.c. of operating costs of post-secondary education, whichever was greater. Implementing this proposal, Parliament passed, in March 1967, the Federal-Provincial Fiscal Arrangements Act, under the terms of which certain percentages of federal revenue plus required cash were to be transferred by the federal Treasury to the provinces commencing with the 1967-68 fiscal year, and to continue for five years. The financial resources transferred to the provinces for 1967-68 are estimated at \$400,600,000, those for 1968-69 at over \$500,000,000 and those for 1969-70 at about \$620,000,000.

In 1967, the federal-provincial agreements for the training of the unemployed, concluded under the Technical and Vocational Training Act of 1961, were allowed to expire and the Adult Occupational Training Act was passed under which the Federal Government takes full responsibility for financing the cost of training adults who are or should be in the labour force. The cost of providing primary, secondary and post-secondary education remains a provincial responsibility. If, in the opinion of a manpower counsellor, it is in the best interest of the individual and of the economy for an adult to undertake training or re-training, it will be purchased by the Federal Government from a public or private training institution or from industry. The program also provides for the payment of allowances to persons who have adult economic responsibilities to enable them to take training but it intentionally avoids the payment of such allowances to youth whose education should normally be provided by the province. Adult trainees who have been three years in the labour force, which includes periods during which employment was being sought, or those

who have dependants, are paid these allowances, which range from \$47 to \$113 a week. Total expenditures by the Federal Government for this purpose amounted to \$245,046,545 in 1969-70 and \$289,576,785 in 1970-71.

The Capital Assistance Program, begun in 1961 to provide assistance to provinces for building and equipping occupational training facilities, was continued by the Adult Occupational Training Act of 1967 but a limit was set on the total amount payable to each province. By Mar. 31, 1971, the Federal Government had contributed nearly \$1,100,000,000 toward costs incurred by the provinces for this purpose. In 1970, in order to speed up the construction of needed training facilities and aid the provinces with their cash management problems, the Federal Government and the provinces agreed to an accelerated phase-out of the program. Under this arrangement, the provinces were to receive the remainder of their entitlements in 1970-71 and 1971-72, to be spent in vocational training facilities by Mar. 31, 1975. A total of \$170,298,261 was paid to the provinces in 1970-71 under the phase-out and the normal procedures.

Under the Canada Student Loans Act (RSC 1970, c. S-17), full-time students may borrow up to \$1,000 annually, interest-free for five years, the \$5,000 or less to be repaid with interest commencing six months after the student has graduated.\* Provision is made for the allocated amount to be increased year by year in proportion to the number of persons 18-24 years of age in the population. The purpose of the loan plan is to assist those students who, for financial reasons, would otherwise be prevented from getting a post-secondary education or would not be able to devote full time to their studies. These loans may be made only on the basis of certificates of eligibility issued by the participating province through the university or institute of technology concerned. There is no upper or lower age limit for eligibility. The loan scheme is operated by the chartered banks, the Federal Government guaranteeing the loans and paying the interest while the student is attending college. All provinces except Quebec participate; Quebec offers its own student assistance program for the benefit of Quebec residents.

The Act provides for basic allocations for each province and also for supplementary allocations to compensate for differences in relative demand as between provinces, based on provincial population in the 18-24-year age group. The basic allocations for the year 1969-70 for participating provinces totalled \$69,500,000 with authority for discretionary allocations up to \$16,148,000, making a total maximum of \$85,648,000 authorized under the Act. Loans actually authorized amounted to \$77,709,000. In addition, federal payments to lending institutions in respect of interest on outstanding loans and other operational expenses amounted to \$17,543,000.

In 1966, the Federal Government inaugurated a program of massive financial support to the provinces for the purpose of providing badly needed facilities for training professional personnel in health services, to be administered by the Department of National Health and Welfare. The Health Resources Fund Act (RSC 1970, c. H-4) provides for the establishment of a fund to assist financially in the planning, acquisition, construction, renovation and equipping of health training facilities, defined to mean any school, hospital or other institution for the training of persons in the health professions or any occupations associated with the health professions, or for the conducting of research in the health field, but excluding any residential accommodation. The Fund was established in the amount of \$500,000,000 to be applied to costs incurred between Jan. 1, 1966 and Dec. 31, 1980; of that amount, \$400,000,000 is available to the provinces on a per capita basis, \$25,000,000 is available to the four Atlantic Provinces for joint projects, and \$75,000,000 remains to be allocated by the Governor in Council. Contributions are payable to the provinces in amounts of up to 50 p.c. of the costs of the projects approved by the Minister's Advisory Committee as part of a five-year plan for the development of health training facilities in a province.

During the five years of operation of this program, 1966-67 to 1970-71, the Federal Government paid \$143,156,000 to the provincial treasuries in respect of approved projects. The projects financed under this program involved training facilities in universities or

\* At the time of writing (December 1971) an announced increase in the maximum annual loan from \$1,000 to \$1,400 and in the total loan from \$5,000 to \$9,800 was awaiting approval by Parliament.

institutions connected with, or operated by, schools of medicine, schools of nursing, including new regional schools of nursing in Ontario, and schools for nursing assistants, as well as facilities for vocational types of training at the higher educational levels.

The Federal Government through the Canada Council in 1957 provided an amount of \$100,000,000, half of which was to be distributed among the universities for specified building and equipment purposes, similar to the distribution of grants. Interest from the remaining \$50,000,000 was to be used to assist in the development of the arts, humanities and social sciences, mainly through scholarships (see pp. 424-425).

Other contributions are more indirect and include scholarships, research grants and reports or services of value to the schools. Research grants are made by the National Research Council, the Defence Research Board, the Department of National Health and Welfare, the Department of Manpower and Immigration and other agencies. Some Departments, such as Agriculture, Health and Welfare, etc., provide materials and publications of value in the school programs, and the National Museums of Canada, including the National Gallery, the National Film Board and the Canadian Broadcasting Corporation contribute directly or indirectly to various school programs.

More directly, the Federal Government is responsible for the education of Indians on reserves, prisoners in penitentiaries, members of the Armed Services and their dependants and in-service training for permanent personnel. It also assists in citizenship training and other out-of-school informal education activities.

### External Education Assistance

The Canadian International Development Agency is responsible for the operation and administration of the technical assistance program offered by the Canadian Government to developing countries. Its activities are outlined at pp. 202-203.

*Many countries are represented in this seminar session at the Coady International Institute of St. Francis Xavier University, Antigonish, N.S., which is the headquarters of one of the western world's most effective programs of social and economic assistance to people of the developing nations.*

### Section 3.—Statistics of Schools, Colleges and Universities

The first two tables of this Section give summary statistics of education at elementary, secondary and tertiary levels. Changes in enrolments at the three levels between 1960-61 and 1970-71 are shown in Table 1 and detailed data on numbers of schools, teachers and enrolment in the different types of institutions in each province and the territories are presented in Table 2, pp. 398-400.

#### 1.—Full-Time Enrolment in Schools, Colleges and Universities, by Level, School Years 1961-62 to 1970-71

School Year	Elementary and Secondary Schools (Public, Private and Federal)			Post-Secondary			Grand Total Enrolment
	Elementary Grades	Secondary Grades	Total	Non-university <sup>1</sup>	University	Total	
	'000	'000	'000	'000	'000	'000	'000
1961-62.....	3,515.2	893.5	4,408.7	64.7	128.9	193.6	4,602.3
1962-63.....	3,604.8	983.2	4,588.0	70.5	141.4	211.9	4,799.9

1969-70.....	4,203.2 <sup>3</sup>	1,558.2 <sup>4</sup>	5,761.4	181.5	299.9	481.4	6,242.8
1970-71.....	4,060.6 <sup>3</sup>	1,756.8 <sup>4</sup>	5,817.4	..	..	..	..

<sup>1</sup> Includes enrolments in teachers' colleges, diploma schools of nursing, community colleges and other non-university institutions; enrolments for Quebec are estimated. <sup>2</sup> Enrolments for Quebec and British Columbia are estimated.

<sup>3</sup> Refers to kindergarten and grades 1-8, inclusive, and elementary ungraded. <sup>4</sup> Refers to grades 9-13, inclusive, and secondary ungraded.

#### Subsection 1.—Enrolments

##### Elementary and Secondary Enrolment

Elementary and secondary school enrolment increased 37 p.c. in the 10-year period 1960-61 to 1969-70; enrolment at the elementary level was 23 p.c. higher and at the secondary level 97 p.c. higher. During that period, the annual rates of increase for total elementary and secondary enrolment ranged from 2.3 p.c. to 4.9 p.c.; in comparison, the annual rates of increase in the country's population ranged from 1.5 p.c. to 2.1 p.c. This upsurge in numbers of students resulted from the high birth rates that prevailed during the war and immediate post-war years. However, the lower elementary school enrolment, by over 140,000 pupils, in 1970-71 compared with 1969-70 may be the first indication of the decline in number of elementary school pupils that was expected to begin in the early 1970s as a result of the low birth rates of the mid-1960s. On the other hand, secondary school enrolments are growing almost without exception in every province as the high volume of pupils attending elementary school in the 1960s moves into the higher grades. This increase is also related in part to the fact that students are staying in school longer and larger numbers of them are planning to go on to some form of post-secondary education. In addition, the greater diversification of courses offered which better prepare students for entry into

<sup>1</sup> Estimate for publicly controlled and private schools only.      <sup>2</sup> Mainly children with learning difficulties receiving instruction in special classes.      <sup>3</sup> Mainly special vocational and occupational courses.

Approximately 2 p.c. of all elementary-secondary school students were enrolled in private schools in 1970-71 compared with 4 p.c. in 1960-61. In almost every province, these schools are being integrated into the public school system, possibly because of the improving quality of public education throughout the country, rising costs associated with private education and increasing democratization of education. Ontario is the major exception; in that province the number of students in private schools increased gradually over the decade from 26,175 to 44,116.

<sup>1</sup> Includes enrolment in Labrador City Collegiate.

tion.

<sup>3</sup> Estimate.

<sup>2</sup> Revised data from Quebec Department of Education.

Table 5 gives figures of enrolment in vocational and technical courses in publicly controlled vocational high schools, apprenticeship courses, trade schools and vocational centres, training in business and industry, nursing assistant schools, diploma schools of nursing, and community colleges and related institutions, together with enrolment in privately operated trade and business school courses. More detail on enrolment in nurses' (R.N.) diploma programs is given on p. 382.

Comparison of figures for 1968-69 and 1969-70 for both publicly controlled and privately operated schools offering vocational and technical courses shows that there has been a definite growth in enrolments. In particular, the increases have been substantial in publicly controlled vocational high schools, in apprenticeship courses, in trade schools and vocational centres and in community colleges, as well as in privately operated trade and business school courses. An increase has also been apparent in the business and industry category in the provinces for which data are available. On the other hand, enrolments in nursing assistant schools and diploma schools of nursing have not increased significantly.

a part-time basis.

<sup>6</sup> Includes enrolment in one school in Newfoundland and one in Prince Edward Island.

<sup>7</sup> An additional 2,160 students attended classes on a part-time basis.

<sup>8</sup> Exclusive of Quebec.

## Post-secondary Non-university Enrolment

During the 1960s, there was a rapid upsurge in enrolment in community colleges and related institutions. In vocational programs alone, full-time enrolment increased from 11,000 in 1960-61 to over 69,000 in 1969-70. (In addition, there are large numbers of part-time students in these colleges taking courses during the day or in the evening.) As already stated, demand increased during the period for technical and para-professional personnel in the labour force, institutions were built in proximity to communities where this demand occurred, finances became available to students and courses became much more diversified, all of which affected this increasing trend in enrolment. Table 6, presenting full-time enrolment in both vocational and academic programs in post-secondary courses in community colleges, shows that there is a great disparity among the provinces between enrolment in vocational programs and in university transfer studies. In 1969-70, community colleges in the Atlantic Provinces, Ontario and Manitoba offered only vocational and technical programs, although the Nova Scotia Agricultural College now provides university transfer studies. In the same year, the numbers of students in the university transfer programs in Quebec and British Columbia were greater than in vocational programs; the Quebec situation may be explained by the fact that the CEGEPs were set up at a tertiary level but as a prerequisite for university entrance and that several classical colleges in existence for some time have since their inception offered only academic programs.

In Canada as a whole, females made up 31.7 p.c. of the enrolments in vocational programs and 38.4 p.c. of enrolments in university transfer programs in 1969-70. In

comparison with the national average, Quebec females comprised upwards of 40 p.c. of the total number in vocational studies but in Ontario and Manitoba they comprised only about 25 p.c. Table 7 shows that more than 30 p.c. of the total female enrolment in post-secondary courses in community colleges was in fields traditionally reserved for females: 20.8 p.c. in medical, dental and nursing courses, 14.4 p.c. in business and commerce (secretarial science, etc.), 14.0 p.c. in applied arts, and 5.7 p.c. in social welfare and recreation. Few women were enrolled in such courses as aeronautical, architectural, automotive and diesel, civil, electrical and electronics, marine, mechanical, natural resources and other technologies. In contrast, upwards of 30 p.c. of the male enrolments were in the traditionally female categories.

Table 8 shows that there has been no significant change recently in the number of full-time students enrolled in the nurses' (R.N.) diploma course. The proportion of males to total enrolment remains very low; Quebec with 2.7 p.c. and Manitoba with 2.0 p.c. had the highest proportions in 1969-70. It should be noted again that in certain provinces some students take their nurses' diploma training in community colleges and related institutions

which results in their being reported twice—in the community college category and in the diploma schools of nursing category. The duplication in 1969-70 totalled 4,886 enrolments, distributed by province as follows: Quebec 3,440, Ontario 620, Saskatchewan 441, Alberta 197, and British Columbia 188.

<sup>1</sup> A small proportion of the students in each year are in a four-year psychiatric nursing program; this total includes 10 in their fourth year. <sup>2</sup> See footnote 1.

**University Enrolment and Graduate Degrees Conferred**

During the 1965-66 to 1970-71 period, full-time university enrolment in Canada increased by approximately 111,000 students, or 54 p.c. The increase in 1970-71 over the preceding year was 5.7 p.c., to which all provinces contributed except Quebec, Manitoba and Saskatchewan. The decline in Quebec may be partly explained by the revised system that has been instituted in that province in which the 12th and 13th years for French-language students and the 12th year for some English-language students are now given in CEGEPs.

<b>Canada.....</b>	<b>205,888</b>	<b>232,672</b>	<b>261,207</b>	<b>270,093</b>	<b>299,889</b>	<b>316,953</b>

It should be noted that, in addition to the full-time university-grade enrolment, the number of students enrolled in pre-matriculation or university-grade courses on a part-time basis, either in the evenings, during summer session or by correspondence, was equal to over one third of the full-time enrolment in the regular winter session in 1969-70 (see also p. 408).

The marked increase in university enrolment from 1960-61 to 1969-70 resulted in a similar upsurge in degrees granted. The number of bachelor and first professional degrees conferred in that period increased 206.8 p.c., the number of masters' degrees 282.5 p.c., and earned doctorates 349.3 p.c. Because, during the same period, the proportion of women to total enrolment rose substantially, the proportion of women receiving bachelor and first professional degrees increased from 25.8 p.c. to 38.3 p.c. In the earlier year, the proportions of women receiving these degrees were approximately the same in all provinces except Quebec, where it was lower; in 1969-70, the proportions were very similar for all provinces.

In 1970-71, as in the past, a large percentage of women graduated in traditionally female-oriented courses. More than 80 p.c. of the graduate degrees, diplomas and certificates conferred on women were in education, the humanities and related subjects and the social sciences and related subjects. The proportion of males receiving graduate degrees in these fields was significantly lower at 59 p.c. The percentage of women to total first and professional degrees granted in law, pharmacy and architecture has shown some increase recently but the proportion of women receiving these degrees to total first and professional degrees conferred on women has not.

Enrolment in Canadian universities and colleges of students from outside Canada has risen considerably during the past decade and a growing proportion of these students are from countries other than the United States and Britain. In the 1969-70 academic year, of the 17,423 students from all countries, 8,320 were from Commonwealth countries; in 1961-62, students from outside Canada numbered 7,251, of whom 3,294 were from the Commonwealth. Historically, most of the foreign students in graduate schools in Canada have been males; consequently, the number of such students should be considered, for example, when calculating the proportion of female enrolment and graduate degrees conferred on women to total enrolment and degrees granted.

### Registrations in Adult Continuing Education Programs

Course registrations in school board adult education programs in 1969-70 was quite substantial, as shown in Table 13. About 46 p.c. of the total were in credit courses and 54 p.c. in non-credit general-interest courses. Since many individuals taking these courses were enrolled in more than one subject, it is estimated that the 354,512 registrations in credit courses represented 175,483 students and that the 420,386 registrations in non-credit courses represented 274,352 students.

Table 14 shows that part-time university and college enrolment in the regular 1969-70 winter session was also quite high and that 68.5 p.c. of the students were enrolled in undergraduate programs, 11.0 p.c. in graduate programs, and 20.5 p.c. in courses not leading toward university-awarded degrees, diplomas or certificates. The number of part-time students in universities who were enrolled in diploma or certificate courses at the non-university level was very small. Women comprised 46 p.c. of the part-time students in undergraduate programs, 24 p.c. of the part-time students in graduate programs and 33 p.c. of those not preparing for university-awarded degrees, diplomas or certificates.

### Subsection 2.—Teaching Staffs

#### Teaching Staffs in Elementary and Secondary Schools

During the 1950s and 1960s, the number of teachers in the publicly controlled schools in Canada increased from 85,152 to 249,078, or by 193 p.c. However, this steeply upward trend is not expected to continue during the next few years. At the elementary level the increase will be limited because of the predicted decline in school enrolment and, although secondary school student numbers are growing, the teaching staff at that level will not increase proportionately because of the current higher student-teacher ratio and the fact of greater teacher specialization.

It is interesting to note that greater numbers of men have entered the teaching profession during the past two decades; the number of men teachers in publicly controlled schools increased by 304 p.c. between 1949-50 and 1969-70, while the number of women teachers rose by 151 p.c. As shown in Table 15, men teachers at the secondary school level now significantly outnumber women teachers in eight provinces (data for Quebec and Ontario are not available) but the opposite is true for teachers at the elementary school level.

British Columbia.....	5,909	2,795	9,840	8,550	8-6	7-2	81.7	74.7

<sup>1</sup> Salary data exclude Roman Catholic separate schools.

<sup>2</sup> A teacher teaching both elementary and secondary grades is classified by level according to type of school. If he teaches in a junior high school or a junior-senior high school, or if he teaches in more than one school he is classified as a "secondary" teacher; otherwise, he is classified as an "elementary" teacher.

The median salary in 1969-70 for all teachers (excluding Quebec and Ontario) was \$7,124, an increase of 263 p.c. over the median salary in 1949-50 of \$1,965. The rate of increase from one year to the next during the two decades fluctuated considerably, ranging from 2.4 p.c. in 1962-63 to 9.7 p.c. in 1968-69.

It should be recognized that variations in median salaries do not necessarily indicate variations in the salary schedules on which teachers are being paid. Since salary scales are based on both years of education and years of teaching service, improvements in the teaching force based on either of these two factors could conceivably cause an increase in the median salary even though the salary scale remained constant. Thus, when the rise in the median is used for interprovincial or historical comparisons, the effects of other contributing factors should be taken into account.

The median salary of men teachers is higher than that of women teachers at both the elementary and secondary levels for eight provinces (excluding Quebec and Ontario). Although, proportionately, the women teachers have more years of experience, a greater proportion of the men teachers are university graduates. However, the proportion of teachers, both men and women, with university graduation has been rising steadily over the past few years and, as stated on p. 382, this trend is expected to continue.

### Teaching Staffs in Post-secondary Non-university Schools

The number of instructors in community colleges and related institutions in eight provinces (excluding Quebec and Prince Edward Island) was 3,965 in 1968-69 and the number in 1969-70 in nine provinces (excluding Quebec) was 4,434. These figures are not strictly comparable because of the exclusion of Prince Edward Island in 1968-69 but, as the number of instructors in that province is relatively small, it does not greatly affect the indicated growth in the total. The figure for each province (except Quebec) in 1969-70 is given in Table 2, pp. 398-399.

### Teaching Staffs in Post-secondary University Institutions

As shown in Table 16, the trend in the number of full-time university teachers in Canada during the period 1960-61 to 1970-71 has been steeply upward, rising from 9,200 to 24,612, or by 168 p.c.; the annual increase ranged from 6 p.c. to 15 p.c. It should be noted, however, that these figures are based on returns from institutions representing 50 to 90 p.c. of the enrolment, depending on the academic year, and are consequently estimates.

#### 16.—Full-Time Teaching Complement in Universities and Colleges, Academic Years Ended 1961-70

NOTE.—Figures are estimates based on returns from institutions representing from 50 to 90 p.c. of the enrolment, depending on the academic year; they include research personnel, junior and sessional lecturers, and assistants.

Academic Year Ended—	Teachers	Academic Year Ended—	Teachers
	No.		No.
1961.....	9,200	1967.....	15,900
1962.....	9,755	1968.....	18,000
1963.....	10,540	1969.....	20,700
1964.....	11,670	1970.....	23,000
1965.....	12,940	1971.....	24,612
1966.....	14,300		

According to a sample of 19 Canadian universities (including, however, the largest in Canada), the median salary of university teachers in 1970-71 was \$14,887, an amount \$1,048 or 8.6 p.c. higher than in the previous year. By rank, the median salary for deans was \$25,575, up 0.5 p.c. from the previous year; for professors, \$22,136 or 8.7 p.c. higher; for associate professors, \$16,096 or 6.7 p.c. higher; for assistant professors, \$12,739 or 6.6 p.c. higher; and for instructors and lecturers, \$10,000 or 6.3 p.c. higher.

Regional disparities exist in median salaries of university teachers for both years. For 1969-70, the median salary of teachers was lowest in the Atlantic Provinces (\$2,111 below the total median salary), followed by the western provinces (\$297 below the total), and highest in the central provinces (\$694 above the total). For 1970-71, the gap in median salaries between the Atlantic Provinces and the other two regions closed slightly.

#### 17.—Median Salaries of Teachers at 19 Degree-Granting Universities, by Region and Rank, Academic Years 1969-70 and 1970-71

NOTE.—Universities include: West—Universities of Manitoba, Saskatchewan, Alberta, Calgary, and British Columbia; Central—Bishop's, McGill, Queen's, Toronto, Victoria, Trinity, McMaster, Western Ontario and Ontario Institute for Studies in Education; Atlantic—Acadia, Dalhousie, St. Francis Xavier, Mount Allison and New Brunswick.

<sup>1</sup> Includes expenditures by provincial governments on central administration and contributions to teachers' pension funds.

## PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

### Section 1.—The Arts and Education

There has been considerable expansion of education opportunities in the arts in Canada in the past few years. Courses of artistic content have increased to some extent in the universities but the main growth has taken place in the newly established community colleges of Ontario and collèges d'enseignement général et professionnel (CEGEPs) of Quebec. These colleges offer both the transfer diploma which allows the student to continue his studies at university, and the vocational diploma with which the student may seek employment in his area of specialty. There are also independent institutions, such as the Artists' Workshop in Toronto, the National Theatre School in Montreal and the Kootenay School of Art in Nelson, B.C., where instruction is given with or without diploma awards.

Table 1 shows the facilities available for the study of the arts in Canada in 1969-70 as reported by 39 universities, 67 colleges and 15 independent institutions.\*

\* More detail is available in Statistics Canada publication *Facilities for the Study of the Arts in Canada* (Catalogue No. 81-223).

#### 1.—Facilities for the Study of the Arts in Canada, Academic Year 1969-70

<sup>1</sup> Includes pottery, ceramics, batik, jewellery and metal arts.

<sup>2</sup> Includes furniture, interior and fashion design.

### Fine Art Schools, Galleries and Organizations

Fine art (architecture, painting and drawing, commercial and decorative arts, graphics, ceramics and sculpture) appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. Eight universities offer a Bachelor of Fine Arts degree:—

Mount Allison University, Sackville, N.B.  
 Sir George Williams University, Montreal, Que.  
 University of Windsor, Windsor, Ont.  
 University of Manitoba, Winnipeg, Man.  
 University of Alberta, Edmonton, Alta.  
 University of Calgary, Calgary, Alta.  
 University of British Columbia, Vancouver, B.C.  
 University of Victoria, Victoria, B.C.

Twelve universities offer a Bachelor of Arts degree with a major in fine art:—

Université de Moncton, Moncton, N.B.  
 McGill University, Montreal, Que.  
 Sir George Williams University, Montreal, Que.  
 University of Ottawa, Ottawa, Ont.  
 University of Toronto, Toronto, Ont.  
 York University, Toronto, Ont.  
 McMaster University, Hamilton, Ont.  
 University of Guelph, Guelph, Ont.  
 University of Western Ontario, London, Ont.  
 University of Windsor, Windsor, Ont.  
 University of Saskatchewan, Saskatoon and Regina, Sask.  
 University of British Columbia, Vancouver, B.C.

There are many schools of art with varying academic requirements for admission. These offer diploma or certificate courses and are concerned largely with the technical development of the artist. Among those widely known are:—

Nova Scotia College of Art, Halifax, N.S.  
 École des Beaux-Arts, Quebec, Que.  
 École des Beaux-Arts, Montreal, Que.  
 Institut des Arts Appliqués, Montreal, Que.  
 School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.  
 Humber College of Applied Arts and Technology, Toronto, Ont.  
 Ontario College of Art, Toronto, Ont.  
 Three Schools in Toronto, Ont.—  
     Artists' Workshop  
     Hockley Valley School  
     The New School of Art  
 Sheridan College of Applied Arts and Technology, Brampton, Ont.  
 Doon School of Fine Arts, Kitchener, Ont.  
 University of Manitoba School of Art, Winnipeg, Man.  
 School of Art, Regina Campus, University of Saskatchewan, Regina, Sask.  
 Alberta College of Art, Calgary, Alta.  
 Banff School of Fine Arts, Banff, Alta.  
 Southern Alberta Institute of Technology, Calgary, Alta.  
 Kootenay School of Art, Nelson, B.C.  
 Capilano College, Vancouver, B.C.  
 Vancouver School of Art, Vancouver, B.C.  
 University of Victoria, Victoria, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. In some of these schools fine crafts as well as

fine arts are taught. Summer schools of art are sponsored by some of the foregoing institutions, by universities and by various independent groups. One of the more important summer schools is the Banff School of Fine Arts, affiliated with the University of Calgary.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions and some range even farther afield. Several organizations such as the Maritime Art Association, the Atlantic Provinces Art Circuit, the Western Canada Art Circuit, the Art Institute of Ontario, the Art Gallery of Ontario and the new *Fédération des centres culturels du Québec* have been founded to carry out this sort of travelling program on a regional basis. On a smaller scale, art circuits are organized to serve certain areas such as those around St. John's, Nfld., Charlottetown, P.E.I., Trois-Rivières and Hull, Que., and Winnipeg, Man. The National Gallery of Canada conducts a nation-wide program of this nature and is one of the largest circulating agencies in North America (see p. 415). Several galleries maintain an art-rental service.

Among the principal public art galleries are:—

Fathers of Confederation Art Gallery and Museum, Charlottetown, P.E.I.  
 Beaverbrook Art Gallery, Fredericton, N.B.  
 The New Brunswick Museum, Saint John, N.B.  
 Musée du Québec, Quebec, Que.  
 Montreal Museum of Fine Arts, Montreal Que.  
 Musée d'Art Contemporain, Montreal, Que.  
 National Gallery of Canada, Ottawa, Ont.  
 Art Gallery of Ontario, Toronto, Ont.  
 Art Gallery of Hamilton, Hamilton, Ont.  
 Kitchener-Waterloo Art Gallery, Kitchener, Ont.  
 Public Library and Art Museum, London, Ont.  
 Sarnia Public Library and Art Gallery, Sarnia, Ont.  
 Willistead Art Gallery, Windsor, Ont.  
 Winnipeg Art Gallery, Winnipeg, Man.  
 Mendel Art Gallery, Saskatoon, Sask.  
 Moose Jaw Art Gallery and Museum, Moose Jaw, Sask.  
 Edmonton Art Gallery, Edmonton, Alta.  
 Vancouver Art Gallery, Vancouver, B.C.  
 Art Gallery of Greater Victoria, Victoria, B.C.  
 Art Gallery of Victoria, Victoria, B.C.

Other important collections of art are housed in arts councils and university galleries. Among the university galleries are:—

St. John's Memorial University Art Gallery, St. John's, Nfld.  
 Anna Leonowens Gallery, Nova Scotia College of Art, Halifax, N.S.  
 Dalhousie University Art Gallery, Halifax, N.S.  
 Creative Art Centre of the University of New Brunswick, Fredericton, N.B.  
 Owens Museum of Fine Arts, Mount Allison University, Sackville, N.B.  
 Université de Moncton, Moncton, N.B.  
 Séminaire des Clercs de St-Viateur, Joliette, Que.  
 Université Laval, Quebec, Que.  
 Loyola of Montreal Museum, Montreal, Que.  
 McGill University, Montreal, Que.  
 Sir George Williams University Art Gallery, Montreal, Que.  
 Carleton University, Ottawa, Ont.  
 Agnes Etherington Art Centre, Queen's University, Kingston, Ont.  
 Hart House, and Sigmund Samuel Canadiana Gallery of the University of Toronto, Toronto, Ont.

York University, Toronto, Ont.  
 University of Waterloo Art Gallery, Waterloo, Ont.  
 McIntosh Memorial Art Gallery, University of Western Ontario, London, Ont.  
 University of Manitoba, Winnipeg, Man.  
 Norman Mackenzie Art Gallery of the University of Saskatchewan, Regina, Sask.  
 University of Saskatchewan, Saskatoon, Sask.  
 University of Alberta, Edmonton, Alta.  
 University of Calgary, Calgary, Alta.  
 Fine Arts Gallery of the University of British Columbia, Vancouver, B.C.

Five of the more important galleries connected with arts councils are the St. Catharines and District Arts Council, St. Catharines, Ont., the Glenhyrst Arts Council, Brantford, Ont., the Department of Fine Arts, McMaster University, Hamilton, Ont., the Brandon Allied Arts Centre, Brandon, Man., and the Art Gallery of the Calgary Allied Arts Centre, Calgary, Alta.

Among the leading fine art organizations of national scope, exclusive of museums and art galleries, are:—

Association of Canadian Industrial Designers  
 National Design Council  
 Canadian Conference of the Arts  
 Canadian Craftsmen's Association  
 Canadian Society for Education through Art  
 Canadian Group of Painters  
 Canadian Guild of Potters  
 Canadian Handicrafts Guild  
 Canadian Museums Association  
 Canadian Society of Graphic Art  
 Canadian Society of Painter-Etchers and Engravers  
 Canadian Society of Painters in Water Colour  
 Canadian Society of Landscape Architects  
 Federation of Canadian Woodcarvers  
 Royal Canadian Academy of Arts  
 Royal Architectural Institute of Canada  
 Sculptors' Society of Canada  
 Town Planning Institute of Canada  
 Canadian Centre for Films on Art  
 Community Planning Association of Canada.

**The National Gallery of Canada.**—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquess of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the Government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament and placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under this management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, a Board of Trustees, reporting to the Secretary of State, administers all the National Museums of Canada, including the National Gallery (RSC 1970, c. N-12). In 1960, the Gallery entered a new era in its history when the entire national collection and

the staff and equipment necessary to its maintenance were transferred to new modern quarters—the Lorne Building in downtown Ottawa—which provides adequate well-lighted space for hanging the permanent collection and for displaying travelling exhibitions.

The Gallery's collections have been built up along international lines and give the people of Canada an indication of the origins from which their own tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections include many Old Masters, among which are twelve acquired from the famous Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a growing collection of contemporary art; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection consists of more than 5,000 items. The services of the Gallery include the operation of a reference library open to the public, which contains more than 30,000 volumes and periodicals on the history of art and other related subjects.

The National Conservation Research Laboratory, established in 1964, provides technical information on works of art from public and private collections across Canada and is responsible for the conservation of the national art collections. In addition, research is carried out on the effects of environment on works of art and on the durability of artists' materials.

An active program of exhibitions, lectures, films and guided tours is maintained for visitors to the Gallery in Ottawa. The interests of the country as a whole are served by circulating exhibitions, lecture tours, publications, reproductions and films prepared by the National Gallery staff. Promotion of and information on art films are handled by the Canadian Centre for Films on Art and their distribution by the Canadian Film Institute. The Gallery promotes interest in Canadian art abroad by participating in international exhibitions such as the Biennials of Venice and Paris, and by preparing major exhibitions of Canadian art for showing in other countries. At the same time, it brings important exhibitions from abroad for circulation in Canada.

**Performing Arts Schools.**—Degree courses in music, the most widespread of the performing arts (which also include opera, drama, ballet and dance) are offered at a number of Canadian universities, listed as follows:—

- St. Francis Xavier University, Antigonish, N.S.—B.A. major
- Dalhousie University, Halifax, N.S.—B. Mus. Ed.
- Mount Saint Vincent, Halifax, N.S.—B.A. (mus.)
- Acadia University, Wolfville, N.S.—B.A. major, L. Mus., and B. Mus.
- Mount Allison University, Sackville, N.B.—B.A. major, B. Mus., B.M. Ed.
- Université de Moncton, Moncton, N.B.—B.A. (mus.)
- Université Laval, Quebec, Que.—L. Mus., B. Mus., D. Mus.
- McGill University, Montreal, Que.—L. Mus., B. Mus., M.M.A. (musical arts)
- Université de Montréal, Montreal, Que.—L. Mus., B. Mus., and D. Mus.
- Carleton University, Ottawa, Ont.—B.A. (mus.)
- Queen's University, Kingston, Ont.—B. Mus., B.A. major
- University of Toronto, Toronto, Ont.—B. Mus., B.A. (mus.), Art. Dip. Mus., Lic. Dip. Mus., Mus. Bac. (performance), Mus. Bac. (history, literature, composition, education), Mus. M., M.A. (musicology), Mus. Doc., Ph.D. (musicology)
- McMaster University, Hamilton, Ont.—Mus. Bac.
- University of Western Ontario, London, Ont.—B.A. major, Mus. B., M.A. (musicology), and Mus. M.
- University of Windsor, Windsor, Ont.—B.A. (mus.) and B. Mus.
- University of Manitoba, Winnipeg, Man.—B.A. major, A.M.M., L.M.M. and B. Mus.
- Brandon University, Brandon, Man.—B. Mus. (education or performance)
- University of Saskatchewan, Regina, Sask.—A.M.U.S., L.M.U.S., B. Mus., B. Mus. Ed.
- University of Saskatchewan, Saskatoon, Sask.—B.A. major, B. Mus., B. Mus. Ed.
- University of Lethbridge, Lethbridge, Alta.—B.A. (mus.)

- University of Alberta, Edmonton, Alta.—B. Mus. and M. Mus.  
 University of Calgary, Calgary, Alta.—B. Mus.  
 University of British Columbia, Vancouver, B.C.—B.A. major, B. Mus. and M. Mus.  
 University of Victoria, Victoria, B.C.—B. Mus., M. Mus., Ph.D. (mus.).

Advanced instruction in music is also given at the Conservatoire de Musique et d'Art Dramatique in both Montreal and Quebec. Opera may be studied at the Royal Conservatory Opera School of the University of Toronto where advanced students work in close collaboration with the Canadian Opera Company and also at the Conservatoire de Musique et d'Art Dramatique and at the Banff School of Fine Arts (summer) at Banff, Alta., an affiliate of the University of Calgary.

Degree courses in drama are offered at the following universities:—

- Université de Moncton, Moncton, N.B.—B.A. (art dramatique)  
 Sir George Williams University, Montreal, Que.—B.F.A. (drama)  
 Queen's University, Kingston, Ont.—B.A. (drama)  
 University of Toronto, Toronto, Ont.—M.A. (drama)  
 University of Windsor, Windsor, Ont.—B.A. (drama), B.F.A. (dramatic art)  
 University of Saskatchewan, Regina, Sask.—B.F.A. (drama)  
 University of Saskatchewan, Saskatoon, Sask.—B.A. (drama), M.A. (drama)  
 University of Alberta, Edmonton, Alta.—B.A. (drama), M.A. (drama), B.F.A. (drama), M.F.A. (drama, design or directing)  
 University of Calgary, Calgary, Alta.—B.F.A. (drama)  
 University of British Columbia, Vancouver, B.C.—B.A. (theatre), M.A. (theatre)  
 University of Victoria, Victoria, B.C.—B.F.A. (theatre).

Advanced instruction in drama is also given during the summer at the Banff School of Fine Arts. The National Theatre School of Canada offers complete practical training for talented students. It is bilingual, courses being held at Montreal, Que.; from October to June. Three years are required for the acting course and two for technical and production studies.

The National Ballet School at Toronto is the only residential ballet school in Canada. It offers academic studies together with practical instruction. Professional instruction is also offered by two other major Canadian ballet companies, Les Grands Ballets Canadiens, Montreal, and the Royal Winnipeg Ballet, Winnipeg, and advanced ballet training is given during the summer at the Banff School of Fine Arts.

## Museums

The museums of Canada, as elsewhere, range from small, locally gathered, historical artifacts and objects to large government-operated institutions which collect, classify and display such objects as may be necessary to study and disseminate knowledge of natural history, human history, science and technology, with special but not exclusive reference to Canada. Many of these larger museums, especially the National Museums of Canada and the Royal Ontario Museum, have a long, distinguished heritage in research and publication of scholarly works and serve an important role as educational and cultural centres. In this area they have an advantage over other agencies of education in that they are able to provide, for study and exhibition, actual, original objects as well as descriptions and pictures of such objects. They offer many educational services to the public through exhibits, guided tours, lectures and scientific and popular publications. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:—

- Nova Scotia Museum, Halifax, N.S.  
 McGill University Museums, Montreal, Que.  
 National Museums of Canada, Ottawa, Ont.  
 Royal Ontario Museum, Toronto, Ont.  
 Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.

Museum of the Province of Quebec, Quebec, Que.

The Manitoba Museum, Winnipeg, Man.

Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children not directly associated with school work including Saturday lectures and film showings, activity groups, nature clubs and field excursions. At the higher educational level, museum field parties provide research training to university students in many disciplines and museum staffs act as professional consultants, answer a host of enquiries on scientific and technical subjects, and serve as consultants or advisers to foreign scholars and institutions.

For adult laymen, museums offer lectures, film showings and guided tours, the latter usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have conducted regular radio or television programs and others have made occasional contributions. Some historical museums stage annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

**The National Museums of Canada.**—The National Museums originated in the Geological Survey of Canada and their early history is inseparable from that institution. The first united Parliament of Upper and Lower Canada met in Montreal in 1841. In July of that year, the Natural History Society of Montreal and the Literary and Historical Society of Quebec petitioned the government to carry out a geological survey. As a result, a resolution was passed in the Estimates of Sept. 10 to defray the expenses of a geological survey of the Province of Canada.

William E. Logan was appointed the first director of the Geological Survey in 1842. He and his assistant, Alexander Murray, undertook their first field work in 1843, and their collections formed the humble beginnings of the National Museums. Logan was much more than a geologist and his interests extended to other branches of natural science. His diaries contain accurate drawings of named plants. He wrote in his annual report for the year 1852-53: "It may be a consideration whether a growing country like Canada could not afford to anticipate what future importance may require in the nature of a national museum and at some future time not far distant, erect an appropriate edifice especially planned for the purpose".

In the meantime, the officers of the Geological Survey continued to collect for the geological museum. In 1856 Elkanah Billings, a palæontologist and the first of a number of specialists, was added to the staff. Legislation passed that same year to continue the work of the Geological Survey specified the establishment of a geological museum open to the public to exhibit specimens, books and instruments.

In 1874 the practice of recording the number of visitors to the museum was started; from May 1874 to April 1875 the number of visitors was 1,017 and by April 1896 it had reached 31,595 annually. In 1874 the distribution of specimens of minerals, rocks and other natural history objects to schools was started with a donation to the Board of School Teachers of Elora, Ont. The first organized museum lecture program was undertaken in 1912 with a series of lectures for young people after school. By 1915, Saturday morning lectures for children and evening lectures for adults—both features of the museum program

today—were in operation. Prior to 1880 the museum occupied several buildings in Montreal, but that year the Geological Survey moved to Ottawa and moved into the former Clarendon Hotel on Sussex Street. Construction of the Victoria Memorial Museum building was started in 1904 and six years later the Geological Survey moved in.

The scope of the museum was enlarged in the Act of Apr. 28, 1877 "to make better provision respecting the Geological and Natural History Survey of Canada and for maintenance of the museum in connection therewith". In that Act the survey was instructed "to study and report upon the flora and fauna of the Dominion" and "to continue to collect the necessary material for a Canadian museum of natural history, mineralogy and geology". As early as the Act of 1856 the Geological Survey of Canada had been authorized to "from time to time" distribute publications relative to the survey. From this authority developed the museum's series of scientific bulletins presenting the researches of its staff.

The Act of 1877 established the Geological Survey and the museum on a continuing basis and permitted the appointment of specialists in natural history. John Macoun was appointed to establish the division of biology in 1882. He was an eminent botanist who had accompanied the expedition of Sanford Fleming to explore Western Canada in 1871. Macoun's report of 1874 laid the groundwork for the establishment of western Canadian agriculture. He also published a catalogue of Canadian birds. In 1895 under the third director of the Geological Survey, George M. Dawson, the museum entered the field of Canadian anthropology.

In 1910 the museum began an expanded program of research and exhibition under the direction of R. W. Brock, then director of the Geological Survey of Canada. Unfortunately this program was curtailed during the first World War because the burning of the Parliament Buildings in 1916 forced Parliament to occupy the museum building until 1919. Later, expansion of the exhibition halls was handicapped by the museum sharing its building with the National Gallery of Canada and the Geological Survey of Canada. In 1927 the Governor General in Council gave authority "to designate the museum branch of the Department of Mines as the National Museum of Canada". In 1956 the museum was divided into two branches, the Museum of Natural History and the Museum of Human History. Ten years later, a third branch, the Museum of Science and Technology, was formed. On Apr. 1, 1968, the National Museums Act was proclaimed by Parliament which brought the three branches of the National Museum of Canada and the National Gallery of Canada under the National Museums Corporation.

The Act specified a 14-member board of trustees with over-all responsibility for policy and operations of the National Museums of Canada. The Board includes a chairman and a vice-chairman, each appointed for a five-year period. The other members are appointed for terms ranging from two to four years each. The new Act also created the position of secretary-general with responsibility for the financial and administrative arrangements of the museums. The names for the three museums were changed—the Natural History Branch became the National Museum of Natural Sciences; the Human History Branch, the National Museum of Man; and the Science and Technology Branch, the National Museum of Science and Technology. The name of the National Gallery of Canada remained unchanged.

The responsibilities of a great museum include collecting, preserving and storing objects related to the various disciplines within its area of activities. Of equal importance is the research carried out by specialists in these fields and the publication of their findings. Museums exhibit artifacts from their collections in attractively designed displays to illustrate the scientific origins of the various subjects. This, however, is only part of a museum's extensive education program, which extends to lectures, publications, enquiries, consultations, workshops, guided tours for children and adults alike, travelling exhibits, loans, library services and radio and television programs. The National Museums of Canada present all these facets for the enjoyment and education of the people of Canada.

Recent activities in the Museum of Natural Sciences, the Museum of Man and the Museum of Science and Technology are outlined in the following paragraphs; the activities

of the National Gallery are discussed on pp. 415-416. The staff common to the four institutions—concerned with exhibition and educational, technical, administrative and financial functions—totalled 391 during 1970-71, including seven executives and 88 scientific and professional, 121 administrative and administrative support, 88 general technical and 46 operational employees as well as 41 casuals. During the 1970-71 fiscal year, the Victoria Memorial Building, which houses the Museums of Natural Sciences and of Man, was closed for renovations and therefore not available to visitors; the National Gallery recorded 454,803 visitors, the Museum of Science and Technology, 512,147 visitors, the National Aeronautical Collection, which is part of the latter Museum, 105,147 visitors, and the Canadian War Museum, 319,241 visitors.

*The National Museum of Natural Sciences* contains divisions of botany, zoology, geology and palaeontology. During the year 1970-71, thousands of specimens were added to its collection as a result of field trips, purchases, donations and exchanges.

The Museum staff was engaged during the year in 65 major research projects and 25 projects of lesser import. Field research included 35 different expeditions and excursions in widely scattered locations ranging from Baffin Island, the Mackenzie delta and Alaska in the north, to Florida, Panama, the Caribbean, the Sargasso Sea and Tierra del Fuego in the south. This work gave support to such research enterprises as the Polar Continental Shelf Project and the *Hudson* and *Sackville* expeditions undertaken by the Department of Energy, Mines and Resources. The Museum supports projects undertaken in universities by staff members or by research associates and provides financial assistance, research facilities and field work for several National Research Council post-doctoral fellows.

The Victoria Memorial Museum building, which houses the Museum of Natural Sciences, was closed in November 1969 for complete renovation and since then the staff has been intensively engaged in planning and designing the new display halls that are now being constructed. When the building is again open to visitors, part of it in 1972, the Museum will be in a position to more completely fulfil its mandate to inform and educate the public.

The Canadian Oceanographic Identification Centre of the Museum processes some 360,000 specimens each year, mainly for other departments of government.

The Museum staff produces five series of publications and assists in the preparation of audio-visual material.

*The National Museum of Man* contains divisions of Archaeology, Ethnology and History as well as the Canadian Centre for Folk Culture Studies and the Canadian War Museum. During the year ended Mar. 31, 1971, the Archaeology Division dug up some 100 sites across Canada (see also pp. 43-46), the emphasis being on salvaging sites that were in immediate danger of being destroyed by human or natural forces. Major projects on the prehistory of Canada's North and of West Coast Alaska dominated the non-salvage work, along with the surveying and testing of other areas. During the summer of 1971, an archaeological-ecological program was conducted at Wawa on the north shore of Lake Superior, which supplied employment for 100 resident students and accommodation and research for 2,000 transient students. The Ethnology Division continued its field studies with the Golden Lake Algonquin, the Koyukuk River Athapascans, the Odanak Abenakis, the Carrier-Chilcotin people of British Columbia and the Cree and Chipewyans of northern Saskatchewan but its activities were dominated by the Museum exhibition program and museology training. As in archaeology, salvage or rescue work continued to be the main focus of effort, as knowledge of traditional life dies with the older Indian and as man and nature destroy archaeological sites. The staff of the History Division, with the assistance of contract researchers, carried out studies on Canadian society and material culture since the beginnings of European colonization, including such subjects as public attitudes toward Indians in Western Canada before World War I, coal mining in Nova Scotia, the status of women in Upper Canada, lighting devices prior to electricity, Windsor chairs, Canadian-made stoves, and work of Canadian silversmiths. In addition, studies were begun as part of planning for permanent exhibits on such broad historical themes as urban life,

rural life, social structure, social change, and man and his environment in Canada. The Canadian Centre for Folk Culture Studies awarded 15 contracts related to the folklore of Canadian ethnic groups. Among the groups studied were the Sikhs and Chinese in British Columbia, the Germans in Manitoba, the French and Ukrainians in Manitoba and Saskatchewan, and the Negroes in Nova Scotia.

During 1970, the Canadian War Museum was refurbished and the Annex prepared for re-opening with new exhibits on the evolution of artillery, the development of armoured fighting vehicles and the air defence of Britain in the First World War. Militaria and memorabilia continued to come from private donors and many new articles (vehicles, medals and uniforms) were added. Three significant accessions were made—a George Cross, two Victoria Crosses won by Canadians, and an armoured German staff car believed to have been used by Field Marshall Goering.

A new section was established to plan and co-ordinate the interpretation and exhibition program in the permanent exhibit halls and to organize a travelling exhibition program. Plans for all permanent and temporary exhibit halls were expanded and designs for the orientation, archaeology and ethnology halls were well under way by the end of the year. The travelling exhibition program included research and fabrication of four major displays of Canadian Eskimo drawings and sculpture, military history and social history which appeared in 13 cities from Vancouver to Glace Bay in Canada and New York to Fort Worth in the United States. The most successful were the Oonark-Pangnark display and the History of Early Domestic Lighting in Canada display for which requests came from all across the Continent. As the year ended, several new exhibits were being planned, including one on Eskimo prehistory to tour Eskimo communities.

Since the closing of the Victoria Memorial Museum in November 1969 for extensive renovation and display redevelopment, exhibit planning and other display work for the seven major halls and for the travelling exhibition program occupied a large portion of staff time, reshaping as well as curtailing to some degree research and field work. Staff scientists attended a number of national and international conferences, lectured widely, acted as advisers for other institutions and countries, taught university courses, trained students, participated in planning exhibits in other museums and assisted with projects in other Canadian centres. The Museum hosted the first Athapaskan Conference, the annual meeting of the Canadian Archaeology Association and a three-day seminar for archaeology students. During the year the staff published 54 articles and books and had another 52 in preparation.

*The National Museum of Science and Technology* has the function of a cultural-educational institution, designed to bring scientific literacy to the visiting public and to familiarize them with the language, events and history of science. In the museum, visitors are confronted principally by demonstrations of scientific principles and displays which, by means of artifacts and texts, correlate these principles with the development of technology. All this is done with particular emphasis on the technologies of ground transportation, aviation, agriculture, shipping and industrial technologies which have been so closely fused to the history of this nation.

The Museum displays are colourful and inventive, designed to involve people in the learning process. Visitors are asked to participate in experiments and in making things work; to explore the technological park; to ride in a double-decker bus or to ride down a track in a gondola car; to push a button or wind a crank to learn some physical law; or to sit in the driver's seat of a giant steam locomotive or a farm tractor. Museum collections are made available to other museums in Canada and abroad, with a view to bringing the story of science and technology to the widest audience possible. The National Aeronautical Collection, part of the Museum, is located in aircraft hangars at Rockcliffe, east of Ottawa. There are displayed some 50 of Canada's national collection of about 80 aircraft, together with engines and other artifacts relating to the development of aviation, so important in Canada and to which so many Canadian contributions have been made.

The Museum sponsors lectures on the history of science and technology. A systematic program of school tours for children in Ontario and Quebec has been developed to fit in with curriculum requirements. Broadly speaking, all programs are built around three general themes relating to national development—how man has overcome space and time in this vast land by various methods of transportation and communication; how man has changed his environment with science and technology and the tools he has built and used; and how man's living habits have changed as he moved from sod hut and log cabin existence to his present sophisticated environment. The Museum is planning publications to expand the content of its exhibits and to give popular accounts of Canadian scientific and technological achievements. The emphasis in the Museum is on being a bright, alert and lively showplace of the development and trends in modern science. Thus, new exhibits and temporary exhibits are added each year to make an approximate 20-p.c. annual change.

Thus, the National Museum of Science and Technology of Canada is in the vanguard of modern museums throughout the world which are emphasizing cultural-educational functions in lieu of traditional museum functions. Visitors to this Museum can have a meaningful experience in Canadian scientific and technological developments as well as in world advancements in these fields.

## Section 2.—Educational Functions of the Canadian Broadcasting Corporation

The educational role of the CBC is largely informal and involves a number of different activities.

**School and Youth Programs.**—The CBC provides facilities and production assistance for radio and television school programs at the primary and secondary school levels. These programs are broadcast in the general program services of the CBC but are intended for classroom use. In the course of a year, CBC radio and television networks carry some 4,000 school programs.

Programs for national distribution on the English networks are designed as enrichment material and are based on elements common to all provincial curricula. They are planned in co-operation with a special committee of the Council of Ministers of Education, including representatives of the teaching profession. Until 1970, the CBC paid the entire cost of the national school programs. In 1971-72 this was changed to a cost-sharing arrangement.

At the provincial level, programs follow school curricula closely and are planned in co-operation with the various provincial departments of education. They are financed on a cost-sharing basis.

In addition to school broadcasts, CBC radio and television produce a variety of entertainment and information programming for children and young people. Both French and English services present programs of stories, songs, puppets, and other learning and play activities for pre-schoolers, plus a variety of material for older children including music, comedy, student quiz programs, adventure series, magazine and interview shows, cartoons and documentary films. CBC Northern Service stations produce regular programs for children in their own areas, including some in Indian and Eskimo languages. In all services, programs for teenagers involve the young people themselves in planning and production, and reflect their own interests and attitudes.

**ETV Stations.**—Because broadcasting facilities come under federal jurisdiction and education under provincial authority, the CBC was asked to act as licensee for a UHF television station in Toronto carrying programs of the Ontario Department of Education. The station, CICA-TV Channel 19, opened in September 1970. By agreement between the CBC and the department, the CBC provides, operates and pays for (on a fully recoverable basis) the transmitter, antenna and associated technical facilities, while the department supplies and pays for all programs.

Another co-operative arrangement involves CBXFT, the CBC's French-language television station in Edmonton which opened in March 1970. The station leases about 40 hours a week of its program time to MEETA, the Metropolitan Edmonton Educational TV Association. During some periods of the day, the station carries the regular French network programming of the CBC. At other times, it transmits the English-language educational programs prepared and presented by MEETA, representing the Alberta Department of Education, the Edmonton public and separate school boards, the University of Alberta and school boards in surrounding areas. This arrangement is to continue for a period of up to three years.

**Adult Education and Information Programs.**—For the adult audience, CBC information programs include daily news and current affairs coverage, plus special-interest programs in areas such as science, literature, art, music, film, language, agriculture and resources, consumer affairs, home and family interests, the social sciences, business and labour, Indian affairs, and religion and philosophy.

The CBC French services, both radio and television, offer a number of credit courses in conjunction with the Université de Moncton, the Université Laval, the Université de Sherbrooke, the Université de Montréal and the University of Sudbury. Program costs are shared.

Stations of the CBC English networks have periodically offered informal instruction programs in conversational French.

The educational projects of the CBC Northern Service include a variety of talks, panel discussions, open-line shows and other information programs in the Indian and Eskimo languages as well as in English and French. Most deal with subjects of immediate practical interest such as health and social welfare, job opportunities, home economics, budgeting, banking, the electoral process and income tax. Some of these programs are developed in co-operation with local adult education agencies or community action groups.

Other Northern Service programs preserve and pass on the folklore and history of the North by means of storytelling, interviews, music and documentaries. Still others provide the day-to-day contacts and services so important to the scattered settlements of the North—world and local news, weather reports, community events and personal and public messages.

One of the most popular features is a form of "instant theatre" in which Indian and Eskimo people of the community improvise radio dramas in their own languages. These plays reflect in a lively and vivid way the personal and social problems facing the original peoples of the North in their encounters with urban and white society.

For newcomers to the North, the Northern Service has introduced "Eskimo for Beginners", a series to teach useful Eskimo words and phrases, and a similar program is being developed to teach Cree.

**Resource Material.**—Both the French and English services of the CBC publish and sell selected program texts in book form. The English-language publications are mainly from lecture and discussion series broadcast on CBC radio and are widely used in schools and universities. Some spoken-word recordings are also produced, such as readings by Canadian poets. The French-language material available for sale includes the texts of certain interviews and talks, as well as records, books, games and toys derived from popular children's programs.

CBC Learning Systems, a section of the English-Language Publications Branch, has an extensive catalogue of sound tapes, available on reels or cassettes, from selected radio talks and documentary series. The tapes are available for sale to educational institutions for non-broadcast, non-commercial use. The availability of CBC educational films for non-broadcast use has been limited by contractual and other considerations.

### Section 3.—The Canada Council

The Canada Council was created in 1957 by an Act of Parliament, to "foster and promote the study and enjoyment of, and the production of works in the arts, humanities and social sciences". It carries out its task mainly through a broad program of fellowships and grants of various types. It also shares responsibility for Canada's cultural relations with other countries in co-operation with the Department of External Affairs. The Council is made up of a chairman, a vice-chairman and 19 members, all appointed by the Governor in Council. Its administration is headed by a director and an associate director, also appointed by the Governor in Council, and it meets at least five times a year.

Within the limits of the Canada Council Act, the Council enjoys a large measure of autonomy, setting its own policies and developing and carrying out its own programs in consultation with the community of artists and scholars. The Council reports to Parliament through the Secretary of State and also appears before such parliamentary committees as the Public Accounts Committee and the Standing Committee on Broadcasting, Film and Assistance to the Arts.

**Income.**—The Council's income is derived from three sources: an annual grant of the Canadian Government which amounted to \$24,200,000 for the year ended Mar. 31, 1971; the Endowment Fund established by Parliament when it created the Council, which is expected to yield \$4,900,000; and private funds willed or donated to the Council and used in accordance with the wishes of the donors.

**Assistance to the Humanities and Social Sciences.**—Assistance to the humanities and social sciences accounts for the larger part of the Council's budget, an amount of \$17,757,000 in 1969-70. In support of research training, the Council awarded 2,368 doctoral fellowships totalling \$10,786,000; for research work, 135 leave fellowships totalling \$1,018,000 and \$4,282,000 in research grants; for research communication, a total of \$796,000 in assistance to learned meetings, visiting professors, attendance of Canadian scholars at international conferences, and publication of learned journals and scholarly manuscripts.

**Assistance to the Arts.**—In the arts, the Council spent \$9,714,000 of which \$2,036,000 was used to finance some 900 bursaries and awards to individuals in the various art forms, and \$7,382,000 was applied to grants to organizations, including \$2,007,000 for music, \$2,566,000 for theatre, \$1,504,000 for dance and opera, \$1,077,000 for the visual arts, and \$162,000 for writing and publication.

**Special Programs.**—The Canada Council administers, on behalf of the Canadian Government, part of a program of cultural exchanges with France, Belgium, Switzerland, the Federal Republic of Germany, Italy and the Netherlands, under which it awarded fellowships and grants totalling \$832,000 to citizens of those countries in 1969-70. The Council also administers the funds of the Canadian Cultural Institute in Rome, created in 1967 by an agreement between Canada and Italy. The Institute's income of some \$25,000 a year is used to provide fellowships for Canadian artists and scholars wishing to work or study in Italy.

The Izaak Walton Killam Memorial Awards of the Canada Council were inaugurated in 1967 with funds from the Killam estate. These awards go to support a few scholars of exceptional ability engaged in research projects of far-reaching significance. In 1969-70, there were 24 awards made under this program, totalling \$525,000.

**Prizes and Special Awards.**—Under its power to "make awards to persons in Canada for outstanding accomplishments in the arts, humanities or social sciences", the Council annually awards the \$15,000 Molson prizes financed by a fund provided by the Molson Foundation. The amount of the fund was raised from \$600,000 to \$800,000 during 1969-

70, enabling the Council to raise the number of annual awards from two to three. The Canada Council Medal, which served more or less the same purpose as the Molson prizes, was abolished. Again that year, the Governor General's Literary Awards, financed by the Council, were awarded to six Canadian writers.

**Unesco.**—The Canada Council Act provides for certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. It has accordingly established a National Commission for Unesco and provides its secretariat and budget. As an agent of the Council, the Canadian Commission for Unesco co-ordinates Unesco program activities abroad and administers a modest program in furtherance of Unesco objectives. In 1969-70, the Council spent approximately \$200,000 through the National Commission for these purposes.

### Section 4.—Provincial Assistance to Artists and Cultural Organizations

Provincial governments, as well as other levels of government and industry, have during the past few years become more and more aware of the significance of the arts in the life of the community. All provinces except Newfoundland, Prince Edward Island, New Brunswick and Manitoba now give some form of financial assistance to artists (writers, poets, painters and sculptors), cultural organizations or community councils. The assistance provided by each province is described in the following paragraphs.

**Nova Scotia.**—This province has no specific legislation authorizing financial assistance for cultural advancement but the Department of Education and several other departments give grants to a number of organizations, and payments are made under the Provincial Finance Act from departmental appropriations.

In the year ended Mar. 31, 1970, grants given by the Department of Education went to Neptune Theatre, \$85,000; the Atlantic Symphony, \$45,000; the N.S. Museum of Fine Arts, \$15,000; the Maritime Conservatory of Music, \$7,500; the N.S. Drama League, \$5,400; the N.S. Festival of the Arts, \$4,000; the N.S. Talent Trust for scholarships, \$2,000. Smaller grants, totalling \$1,850, went to the N.S. Folk Arts Council, the Halifax Music Festival Assoc., and the Canadian Theatre Center. Department of Finance grants were given to the Atlantic Symphony, \$15,000; the Antigonish Highland Society, \$2,000; and the Acadian Festival \$700. The Department of Public Service Youth Agency granted \$5,000 to the N.S. Pipers and Pipe Band Association, and Trade and Industry granted \$1,000 to the Annapolis Valley Blossom Festival.

The Department of Education's Fine Arts and Handcrafts Section operated under a budget of \$129,500 and disbursed small grants for instruction purposes to organizations to the amount of \$10,000. The N.S. Museums Section of the Department of Education operated under a budget of \$455,000 and disbursed grants totalling \$67,000 to local museums and historical societies. Other expenditures of the Department of Education were: N.S. Provincial Libraries, \$997,000; Publications and Information, \$130,000; television education, \$164,000; visual education, \$54,800; and radio education, \$11,300.

**Quebec.**—The Quebec Department of Cultural Affairs, established in 1961, has the task of promoting the arts in the province and of encouraging the extension of the French culture outside of the province. The first function is carried out by the Creative Arts Branch which provides assistance to the arts in the form of awards, scholarships or grants to individuals and organizations. In the year ended Mar. 31, 1971, the amount expended for this purpose was \$4,741,587, of which \$331,785 was granted to individuals. There were 54 grants valued at \$150,000 given to individuals for creative projects; \$78,095 was used to pay the travelling and living expenses of 57 individuals for study outside of Quebec or participation in international competitions, most of them working under the France-Quebec cultural agreement; \$70,000 was given to assist authors with the publishing of

research works and to purchase books directly from the author at full price; awards for literary excellence amounted to \$33,750, including the \$5,000 David Award, which is Quebec's highest literary award, and \$20,000 for literary works published during the preceding year; \$15,000 was given in prizes for works of art and \$8,000 was divided among non-prize winning participants in competitions.

Grants to organizations included: \$50,000 for the purchase of volumes for libraries or to be given as awards to students; \$61,400 to associations of publishers, writers, poets, etc.; \$1,002,600 to 22 theatrical groups; \$937,137 to choirs, orchestras and other musical organizations; \$225,500 to visual arts organizations; \$175,000 to art and cultural centres; \$1,550,000 to 115 public libraries; \$266,000 to 11 French-speaking Quebec organizations working toward the improvement and extension of the French language; and \$172,000 to 29 other cultural organizations. Also, grants amounting to \$78,000 were given to 24 organizations located outside of Quebec in Canada and in the United States, which were working toward the extension of the French language in their respective areas.

Other Branches of the Department are concerned with the expansion of the French fact throughout North America and with extending cultural exchanges between Quebec and France; with providing teaching and administrative services for music and drama conservatories; with organizing an efficient and cohesive library system throughout the province; with co-ordinating the activities of the many cultural organizations throughout the province; with preserving its architectural, artistic and historic heritage through technical advice and grants to property owners; with the operation of museums; and with the enrichment of both spoken and written French.

**Ontario.**—The Ontario Government passed legislation in 1962 (SO 1962-63, c. 6) establishing the Province of Ontario Council for the Arts, which consists of a chairman, a vice-chairman and ten other members, all appointed by the Lieutenant-Governor in Council. It is the function of the Council to promote the study and enjoyment of and the production of works in the arts and to such end may (1) assist, co-operate with and enlist the aid of organizations whose objects are similar to the objects of the Council; (2) provide through appropriate organizations or otherwise for grants, scholarships or loans to persons in Ontario for study or research in the arts in Ontario or elsewhere or to persons in other provinces or territories of Canada or any other countries for study or research in the arts in Ontario; and (3) make awards to persons in Ontario for outstanding accomplishments in the arts.

In the year ended Mar. 31, 1971, a total of \$1,963,552 was dispensed by the Council in the form of grants or project assistance. Of that amount, \$1,781,936 was given in grants to 89 organizations, the largest of them to the National Ballet Guild of Canada, \$145,000; the Toronto Symphony Orchestra Association, \$145,000; the Canadian Opera Company, \$100,000; the Stratford Shakespearean Festival, \$415,336; and the St. Lawrence Centre Theatre Company, \$228,212. Twenty-nine projects were assisted, the largest amounts going to the Co-ordinated Arts Services, \$50,000; the Dominion Drama Festival, \$31,000; the Ontario Federation of Symphony Orchestras, \$13,000; the Resident Musician Program, \$36,000; Ontario Sound '71, \$14,414; and Concerts and Artists, \$12,190.

In addition, the Ontario Department of Energy and Resources contributed \$124,500 toward the McMichael Conservation Collection of Art at Kleinburg, and the Department of University Affairs contributed \$3,625,000 to the Royal Ontario Museum, \$610,000 to the Art Gallery of Ontario and \$906,000 to the Ontario College of Art.

**Ontario Place.**—The building of Ontario Place on the Toronto waterfront is one of Ontario's greatest contributions to the arts in the province. It was opened on May 22, 1971 and up to September of that year more than 2,000,000 people from Ontario and every part of Canada and the world visited this new showcase of entertainment and the arts.

The skills of Ontario film-makers are on view at Cinesphere, the domed 800-seat theatre. A world-wide "first" has been the introduction of the giant-screen film, *North of Superior*,

filmed by Graeme Ferguson of Galt, Ont. The film utilizes an Ontario-developed process which projects a 60- x 80-foot image on a curved screen, literally engulfing the audience in the sights and sounds of the picture. Other Ontario-made films were especially produced for Cinesphere, including *Seasons in the Mind*, which highlights eastern Ontario, *Home by the Waters* showing the thousands of miles of the province's waterways, and *Where the North Begins*, a study of the vital people of Ontario's north.

In the Pavilion, four pods of the steel-stilted structure house multi-media exhibits created by Ontario writers, designers, artists and film-makers. These tell the story of Ontario's past, present and future, using three-dimensional film and sound, slides, inflated forms and artifacts.

In the Forum, an 8,000-capacity amphitheatre, is displayed almost every imaginable type of artistry. The Toronto Symphony was heard by up to 10,000 people each night during the 1971 summer season and the National Ballet of Canada presented to thousands of visitors the best Canadian talent in this field. The finest performers and artists were brought before the public through rock and jazz concerts, military bands, organ recitals, choirs, variety programs, country and western programs and art shows. The Forum has also been a focal point for the introduction of deserving Canadian talent. Early in the year in centres throughout Ontario, adjudicators listened to hundreds of performers in every field of entertainment and from these many were selected and given the opportunity of appearing in a series of weekly Talent Nights held during the Ontario Place season.

**Manitoba.**—The Manitoba Arts Council was formed by legislation passed in 1965, providing for a chairman, vice-chairman and 10 members appointed by the Lieutenant-Governor in Council, with the objective of promoting "the study and enjoyment of the production of works in the arts, assisting and co-operating with those organizations involved in cultural development, providing for grants, scholarships or loans to Manitobans for study or research in the arts, and recognizing outstanding accomplishments in the arts". Working on a budget of \$254,000, the Manitoba Arts Council in the year ended Mar. 31, 1971, made grants to 32 organizations, including \$48,000 to the Manitoba Theatre Centre, \$30,000 to Rainbow Stage, \$52,000 to the Royal Winnipeg Ballet, \$39,000 to the Winnipeg Art Gallery, and \$52,000 to the Winnipeg Symphony Orchestra.

The Manitoba Arts Council has served as the advisory body to the Metropolitan Corporation of Greater Winnipeg in distribution of its funds to assist cultural organizations, and worked closely with the business community in setting up the First Canadian Business and the Arts Conference, held in 1971.

**Saskatchewan.**—In 1949, the Saskatchewan Arts Board was established by Act of the Legislature, its stated aim being "to provide opportunity for the people of that province to participate in visual art, music, drama, literature, handicrafts and other cultural pursuits; to stimulate and encourage this participation and appreciation". The means of achieving these aims were left to the judgement of the Board.

The Saskatchewan Arts Board is an autonomous body, funded by the provincial government but functioning independently, composed of not less than seven nor more than 15 volunteer members appointed annually by the Lieutenant-Governor in Council. These members are from all parts of the province but represent no specific areas nor any specific disciplines in the arts. The work of the Board is carried out by a staff of two consultants and five office personnel, under the direction of the Executive Director. Experts in various fields of the arts are engaged for specific projects where their special talents are required.

Over the years, handicraft, visual and performing arts programs have been expanded to the point where in some areas they have reached the professional level. Workshops, lectures and seminars at an advanced level have been sponsored by the Board, and considerable assistance has been given to local arts and crafts organizations in sponsoring similar projects at a local level. In most cases, the Board is not an instigator but prefers to assist established organizations in carrying out their own programs.

A highly successful Saskatchewan Summer School of the Arts, operated annually by the Saskatchewan Arts Board at Fort San, offers one-to-four-week courses in band, orchestra, stage band, choral singing, piping and drumming, highland and ethnic dancing, ballet, painting, pottery, acting, creative writing and weaving, with instruction by highly qualified teachers.

For five years from 1965, the annual month-long Saskatchewan Festival of the Arts focused attention on the arts in communities throughout the province by presenting top-calibre artistic performances and exhibitions. This Festival concept has been replaced by similar programs planned by individual communities to meet their specific needs.

Each year, the Board has provided financial assistance to individual provincial artists to help them further their artistic training, or to establish themselves at a professional level. Individual assistance grants are based primarily on financial need, with scholarship and artistic ability as important factors. Emphasis is placed on assisting those in undergraduate studies or those striving to achieve professionalism.

Financial assistance has also been extended to art galleries, theatrical groups, music societies and orchestras, provincial arts councils and a number of arts organizations, mostly within the province but some at a national level.

**Alberta.**—The Cultural Development Branch of the Department of Culture, Youth and Recreation was begun after an Act of the Legislature was passed in 1946 providing for "encouragement of the cultural development of the people of this Province". The Act has since been amended several times to give it greater flexibility. The Branch is interested in the promotion of all forms of art and public libraries. Its program is intended (1) to give opportunity to the public to witness the best in performing arts tours, exhibitions, etc., in order to gain their initial excitement and interest in the various modes and expressions in the arts; (2) to conduct training courses at regular intervals for a variety of leaders, with special emphasis on in-service training for teachers in the public school system and instructors at special institutions, which have programs that develop arts according to the needs of the individual, such as those for the mentally and physically handicapped, the aged, or penal institutions; (3) to provide consultative services for cultural organizations throughout the province; and (4) to give financial assistance to individuals, local amateur and professional institutions and provincial government organizations whose aims are the development of the arts. Awards to individuals wishing to further their training in some form of the arts amount to \$50,000 annually. The budget of the Branch for the year ended Mar. 31, 1970 was over \$1,250,000.

**British Columbia.**—The British Columbia Cultural Fund was set up by statute in 1967. That Act set aside \$5,000,000 in an endowment-type fund, the interest from which was to be spent "for the stimulation of the cultural development of the people of the Province". In September of that year, an Advisory Committee was established to receive applications for cultural grants and to report their recommendations to the Department of Finance for the issuance of the necessary funds. In 1969, the amount of the endowment was raised to \$10,000,000.

Grants totalling approximately \$155,000 were made from the Fund to some 50 Community Arts Councils throughout the province in 1970, and grants to major organizations amounted to \$466,575. For example, grants were made to such organizations as: the Vancouver Opera Association, \$40,000; the Victoria School of Music, \$8,500; the Victoria Symphony Society, \$24,800; the Vancouver Symphony, \$91,500; the Vancouver Art Gallery, \$32,240; the Victoria Art Gallery, \$10,500; the Playhouse Theatre, \$60,000; the Metro Theatre, \$31,500; the Bastion Theatre, \$30,000; the Canadian Theatre Centre, \$1,000; the National Theatre School, \$3,500; and the National Youth Orchestra, \$2,000.

In addition, the Advisory Committee continues to support the Indian population with their various projects in the cultural fields. Scholarships are awarded to individuals enrolled in nationally and internationally accepted schools of dance, theatre or music.

During 1970, the British Columbia Bands and Choirs Championships were held under the sponsorship of the British Columbia Cultural Fund. The province was divided into 12 regions for the purpose of regional competitions in six different categories: junior secondary school bands, senior secondary school bands, community bands, junior secondary school choirs, senior secondary school choirs and community choirs. The provincial finals were held in Vancouver in May 1971; all expenses including transportation, accommodation and meals for the finalists were met by the British Columbia Cultural Fund.

It should be noted also that a certain amount of provincial assistance, other than that provided by the Cultural Fund, was given to cultural organizations during 1970 but the total amount of such assistance is not available.

## Section 5.—Library and Archive Services

### Library Services

**The National Library.**—The National Library of Canada came into existence formally on Jan. 1, 1953 by Act of Parliament. On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Library is now governed by the National Library Act, 1969 (RSC 1970, c. N-11) which broadened the powers of the National Librarian to whom is assigned the responsibility of co-ordinating government library services. The Act established a National Library Advisory Board consisting of 15 members.

The Library was housed for a long period in inadequate temporary quarters that limited its collections and activities. Construction of a permanent building, designed to accommodate both the National Library and the Public Archives, began in 1963 and was completed in the spring of 1967. The new structure, which has a floor area of 13 acres and was equipped initially with 81 miles of steel shelving, was opened formally by the Prime Minister on June 20, 1967. The book collection now consists of more than 400,000 volumes, supplemented by microcopies of more than 100,000 additional titles. Newspaper files formerly in several locations have been brought together and now form the largest collection of Canadian newspapers in Canada.

The Library compiles and publishes *Canadiana*, a monthly catalogue of new books and pamphlets relating to Canada; 12,000 to 13,000 titles are listed each year.\* *Canadiana* includes details of trade publications, official publications of the Government of Canada and the ten provinces, films, filmstrips and phonograph records produced in Canada.

The *Canadian Union Catalogue* lists over 10,000,000 volumes in about 300 government, university, public and special libraries in all provinces. New accessions (which numbered over 1,200,000 in 1969-70) are reported regularly, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the year ended Mar. 31, 1971, the Reference Division was asked to locate more than 100,000 titles, and it is noteworthy that copies of 77 p.c. of them were found in Canadian libraries.

The Library has published a union list of serials in the fields of the humanities and social sciences currently received by Canadian libraries. This list is a first step toward a complete union list of such serials in the humanities and social sciences that will complement the *Union List of Scientific Serials in Canadian Libraries* published by the National Science Library. The Library is also preparing for early publication a retrospective *Bibliography of Canadiana, 1867-1900*, which will list more than 25,000 titles.

\* A list of 400 selected titles of "Books About Canada", prepared by the National Library, appears in Chapter XXVI of this volume.

**The National Science Library.**—The functions and services of the National Science Library, which is administered by the National Research Council Library, are described in Chapter VIII on Scientific and Industrial Research, pp. 451-452.

**Public Libraries.**—Public libraries in Canada are organized under provincial legislation which specifies the method of establishment, the services to be provided and the means of support. Municipalities may organize and maintain public libraries or join together to form regional libraries according to provincial legislation. Provincial public library agencies advise local and regional libraries and distribute grants as provided.

Table 2 gives summary results of the annual public library survey for 1969, with comparable totals for 1967 and 1968. Book circulation was 92,910,068, or 5.8 per person served. The current operating payments of all public libraries amounted to \$51,867,000, or \$3.22 per person served compared with \$2.99 in the previous year. The full-time staff numbered 4,573 in 1969, of whom 998 or 21.8 p.c. were professional librarians.

## 2.—Summary Statistics for All Public Libraries, 1969, with Totals for 1967-69

Province or Territory	Population Served	Libraries	Stock	Circulation	Current Operating Payments	Full-Time Staff
	No.	No.	No.	No.	\$'000	No.
Newfoundland.....	514,000	3	833,788	2,054,833	630	85

British Columbia.....	1,595,699	77	3,080,378	14,448,887	6,281	807
Yukon Territory.....	15,000	1	55,708	55,708	108	11
Northwest Territories.....	32,000	1	19,065	34,104	142	9
<b>Totals, 1969.....</b>	<b>16,088,731</b>	<b>723</b>	<b>24,374,244</b>	<b>92,910,068</b>	<b>51,867</b>	<b>4,573</b>
<b>1968.....</b>	<b>15,653,713</b>	<b>716</b>	<b>23,008,802</b>	<b>88,586,493</b>	<b>46,844</b>	<b>4,348</b>
<b>1967.....</b>	<b>16,100,496</b>	<b>855</b>	<b>21,634,868</b>	<b>81,788,829</b>	<b>41,154</b>	<b>3,838</b>

**Libraries in Universities and Colleges.**—Libraries in 73 universities (including four-year affiliated or associated institutions) having an enrolment of 100 or more full-time students reported, for the academic year 1969-70, a total of 20,583,283 volumes or 73.2 per full-time student. Expenditures of university libraries amounted to \$69,824,608, or \$248.14 per student. The total full-time staff of the libraries numbered 6,011, of whom 1,417, or 23.6 p.c., were professional librarians.

Libraries in 99 colleges (post-secondary institutions such as CEGEPs, colleges of applied arts and technology, teachers' colleges, etc.) reported a total book stock for 1969-70 of 2,198,550 volumes or 23.31 per full-time student. Expenditures of these libraries amounted to \$6,701,877 or \$71.00 per student. Total library staff was 559, of whom 154, or 27.6 p.c., were professional librarians.

**3.—Libraries in Universities and Colleges, Academic Year 1969-70**

NOTE.—Because of a change in classification of institutions, comparable data for previous years are not available.

**The Public Archives**

Provision for the creation of the Public Archives was first made by an Order in Council of June 20, 1872, which appointed an officer of the Department of Agriculture to take charge of historical archives. In 1903, the responsibility for old government records was transferred from the Secretary of State to the Department of Agriculture, and the head of the Archives was given the title of Dominion Archivist and Keeper of the Records. In 1912, the Archives became a separate department and was named Public Archives; it now operates under authority of RSC 1970, c. P-27. The Public Archives has a dual role. As a research institution, it is responsible for acquiring from any source all significant documents relating to the development of the country and of value to Canada, and for providing suitable research services and facilities to make this material available to the public. As an essential part of the government administration, it has broad responsibilities in regard to the promotion of efficiency and economy in the management of its records.

The Historical Branch is comprised of four Divisions. The Manuscript Division contains manuscript collections and public records. The manuscript collections include private papers of statesmen and other distinguished citizens, records of cultural and commercial societies, and copies of records in France, England and other countries relating to Canada. The public records consist of selected records of all departments and agencies of the Government of Canada. The Picture Division has charge of documentary paintings, water colours, engravings and photographs relating to people, historical events, places and objects. It also has an extensive collection of films and sound recordings. The Map Division has custody of thousands of maps and plans pertaining to the discovery, exploration and settlement of this country and its topography, as well as a large collection of current topographical maps of foreign countries. The Library contains more than 80,000 volumes on Canadian history, including numerous pamphlets, periodicals and government publications.

Although documents in the Archives may not be taken out on loan, they may be consulted in the building, and a 24-hour-a-day service is provided for accredited research workers. Reproductions of available material may be obtained for a nominal fee on request and many of the documents in the Manuscript Division are on microfilm which may be obtained on inter-library loan.

The Records Management Branch assists departments and agencies in the setting up and operation of their records management programs. Its service also includes recommendations and advice on scheduling and disposal of records. At the Ottawa, Toronto and Montreal Records Centres it provides storage, reference service and planned disposal of dormant records on an economical basis. Other regional centres are being established in major cities across Canada.

The Administration and Technical Services Branch, in addition to an extensive conservation and restoration program, provides a technical and advisory service on micro-filming to government departments and agencies. Microfilm work is done for departments at cost. It also provides a full range of services to the National Library.

Branch offices of the Public Archives are located in London, England, and Paris, France. The Archives also administers Laurier House as a historical museum.

---

*National Research Council biologists study the effects of stress, such as migration or exposure to cold, on birds subjected to persistent pollutants including DDT and similar chemicals. These compounds tend to accumulate in fatty tissue and remain relatively inactive until released by increased energy expenditure into the circulatory system.*

## Section 1.—Organization of and Expenditures on Scientific and Industrial Research in Canada

The organization and distribution of the research and development effort in Canada are partially the result of certain characteristic problems of this country, especially its large area, its relatively small population and peculiar population distribution, and its unusual industrial structure. However, there are indications that certain major shifts in the previous pattern of effort may be close at hand, caused by the emergence of organizations concerned with science policy questions and the recent general recognition of the growing importance of science and technology to modern society.

Early research in Canada was related mainly to the primary industries. Geological mapping and agricultural research were almost the only areas of scientific activity until the beginning of the present century. In 1898, research and development in the field of fisheries was assigned to an independent honorary board (the Biological Board) which has continued until recently as the Fisheries Research Board. In 1916, the Federal Government set up the National Research Council, the early duties of which were to encourage and stimulate research in the universities and industry. It later undertook research

\* The introductory material appearing in the various Sections of this Chapter, except where otherwise credited, as well as Section 6 were prepared or revised (July 1971) by W. D. Bennett, Science Adviser, Science Council of Canada, and the statistical data were supplied by the Science Statistics Section, Education Division, Statistics Canada. Departmental and agency information was prepared as indicated.

activities with the establishment of its own laboratory system in the late 1920s and early 1930s. A great expansion in scientific research and development took place during the Second World War. The National Research Council assumed responsibility for research and development activity for the three Armed Services and for the development of atomic energy. After the War, in 1947, the Defence Research Board was set up in the Department of National Defence to take over the responsibility for military research and development (see Chapter XXV) and, in 1952, the Crown corporation Atomic Energy of Canada Limited was established to proceed with the development of atomic energy in Canada, and the National Research Council returned to its previous activities. Also, certain other Crown corporations, such as Eldorado Nuclear Limited, Polymer Corporation Limited, and Canada's largest national utility, the Canadian National Railways, developed important research programs. In 1960 the Medical Research Council was established in association with the National Research Council.

Until the 1950s, industrial research was slow to develop in Canada, although certain large industries, particularly the chemical industry and the pulp and paper industry, had long histories of successful research and development effort. Through the efforts of the industrial companies themselves and by means of various government-sponsored incentive programs, the industrial research and development effort in Canada has since grown and diversified considerably. In addition, provincial research councils were set up both before and after the War in several provinces, usually for the general purpose of improving the provinces' utilization of their resources and the production efficiency of their industries. Of these, the Ontario Research Foundation and B.C. Research (of the British Columbia Research Council), although established under provincial legislation, are self-governing institutions engaged in research and development on contract for manufacturers, departments of government and on their own account, and derive their current revenue mainly from sponsored research. Furthermore, the Pulp and Paper Research Institute of Canada (see Chapter XIII, Part I) is the one major research association that operates on a co-operative basis; its operating funds are provided by industry and its facilities by the Federal Government and McGill University, all three vitally interested in ensuring that this industry maintains its competitive position in world markets. Previously, the primary resource base of industry generally was not conducive to the establishment of industrial research laboratories. As well, the degree of foreign ownership of manufacturing companies in Canada undoubtedly had some influence on the development of industrial research, since Canadian subsidiaries of foreign companies had ready access to the research and development results of their parent companies. As a result of the consequent lack of incentives, all but a few of these subsidiaries refrained from establishing their own laboratories and from developing products specifically for the Canadian market. However, to meet the challenge of competition from other countries in the production of sophisticated modern items of manufacture, Canadian industry has increased its own scientific and technical investigations. The Sheridan Park Research Community, just outside Metropolitan Toronto, is an example of a recent concept for improving the efficiency of and expanding industrial research in Canada. A somewhat similar but more diffuse development took place earlier at Pointe Claire, near Metropolitan Montreal. Industrial research centres of this type facilitate applied research and development activities for the scientists and engineers involved by permitting ready interchange of non-proprietary scientific and technical information and access to a wide variety of instrumentation, equipment and skills. They also provide an attractive environment for skilled personnel, and thus increase Canada's potential for keeping its trained scientists and engineers. At Sheridan Park the research laboratories of 10 individual companies are in full operation and there is room for further corporate participants. A Conference Centre has been built and the community members have formed an association to promote and expedite many other mutually desirable arrangements.

A significant element in the training of scientists and engineers beyond the undergraduate level involves the research and development activities undertaken in the universities as part of their program of graduate studies. These research and development

activities are related directly to the educational process and are of great importance in the training of the skilled personnel needed for the development of Canada's economy; they have a further importance in that they create centres of basic research in Canada and therefore act as listening posts tuned to the progress of science and technology in other parts of the world.

Thus, there are three main sectors of research and development in Canada—research and development in government, in industry and in the universities. These three elements are covered in some detail in the remainder of this Chapter.

**Mechanism for the Federal Science Policy.**—In the federal sphere, the ultimate authority for policy on science resides in the Cabinet. To exercise this authority there was established by the National Research Council Act (RSC 1970, c. N-14) a Cabinet committee known as the Committee of the Privy Council on Scientific and Industrial Research. This Committee comprises those Cabinet Ministers having departments with major scientific responsibilities and certain other Ministers who have an indirect concern with scientific affairs. These federal departments and agencies advise the Privy Council Committee on the scientific aspects of their own departmental responsibilities and on the organization and support of research required for their own purposes. For many years, the National Research Council, on the other hand, advised the Committee on general science policy, particularly on research in the universities, in industry and in fields not specifically the responsibility of departments or agencies. Then, in 1949, the Privy Council Committee broadened the structure of its advisory mechanism by the addition of an Advisory Panel for Scientific Policy to which the Privy Council Committee could turn for joint advice on the formulation and conduct of government scientific policies. This panel consisted of senior officials from the science-based departments and agencies.

In 1964, as a result of the recommendations of the Royal Commission on Government Organization, a Science Secretariat was created in the Privy Council Office with the task of assembling and analysing information on the Government's scientific and technological activities, as well as on those of industry, the universities and the provinces, particularly in relation to the activities and concerns of the Federal Government. In 1971, the Science Secretariat became the Secretariat for Science Policy and Technology, with additional responsibilities. These concerned the establishment of program monitoring procedures and techniques for forecasting requirements in science and technology to enable formulation of policy and expenditure proposals; the development, in co-operation with other departments and agencies, of an information system capable of supporting these evaluations and proposals; and the co-ordination of government participation in national and international scientific and technological activities. The latter incorporated a responsibility already assumed by the Science Secretariat in advising the Department of External Affairs on the selection of Counsellors (Scientific) for placement in certain Canadian embassies abroad, and on the distribution of reports received from these Counsellors. The Director of the Secretariat, who is also Chief Science Adviser to the Government, acts as secretary to the Committee of the Privy Council on Scientific and Industrial Research.

In 1966, the Federal Government established the Science Council of Canada, a Crown corporation with the duty of independently assessing Canada's scientific and technological resources, requirements and potentialities and making recommendations thereon by the publication of reports. The Science Council is concerned both with research and development and with the use of science and technology in the solution of Canada's social and economic problems. It draws its membership from industry, the universities and government. The Science Council has had, since 1968, its own executive arm. For the first two years of its existence, it received professional and administrative support from the Science Secretariat.

Since its formation, the Science Council has initiated intensive studies of science and technology in Canada in order to provide a basis for advice on the formulation of policies

and plans for the future. It has published several reports based on commissioned studies of different areas of science and also published its own reports, making recommendations on these subjects (e.g., upper atmosphere and space, the proposal for an intensive neutron generator, water resources research, university research and the Federal Government, scientific and technical information dissemination, earth and marine sciences, research in fisheries, wildlife, forestry resources and agriculture, and a Canadian STOL air transport system). In addition, the Council has published its first science policy report in which it recommends that Canada focus its scientific and technological effort through the creation of Major Programs designed to help solve some of the country's social and economic problems. These Programs include, among others, a space program for Canada, water resources management and development, transportation, urban development, computer applications and scientific and technological aid to developing areas of the world. The Council is continuing its study of these and various other possible Major Programs from the viewpoints of cost-benefit, organization, direction and funding.

In 1967, a Senate Committee on Science Policy was formed to consider and report on the scientific policy of the Federal Government with the object of appraising its priorities, its organization, its budget and its efficiency. The proceedings of the committee form a valuable documentation of the current state of science policy and the first published report (Vol. I, December 1970) describes what the committee considers to be major deficiencies in the policy. Vol. II, which was released in January 1972, contains specific recommendations.

A more recent development (June 1971) has been the establishment of a Ministry of State for Science and Technology. The Minister responsible will formulate and develop policies with respect to the means of improving the application of science and technology in Canada, the co-ordination of science and technology within the Federal Government and the fostering of co-operation in science and technology with the provinces, with public and private organizations and with other nations. The Ministry incorporates the Secretariat for Science Policy and Technology and the Science Council now reports to the Government through the Minister of State.

**Research and Development Expenditures in Canada.**—In the past decade, Canada's gross expenditures on research and development (GERD) have more than doubled (Chart II) and government has remained the major source of research and development funds. In 1969, Canada's current expenditures on research and development amounted to about \$841,000,000, divided as shown in Table 1.

### 1.—Current Expenditures on R & D in Canada, 1969

Source of Funds	Sector of Performance			Total Funds

### GROWTH OF CANADIAN INDUSTRIAL RESEARCH AND DEVELOPMENT YEARS ENDED MAR. 31, 1958-70

## Section 2.—Scientific Research Expenditures of and Activities in Federal Government Organizations

Research activities in the various Federal Government departments and agencies have expanded rapidly, at first because of the need for speeding up the production of raw materials, which were long the basis of Canada's export trade, and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements.

In Subsection 1 of this Section, which gives statistics of all Federal Government expenditures on scientific research, the departments and agencies conducting such research are listed in Table 3, p. 440. Subsections 2 to 8 review the research activities of the National Research Council, Atomic Energy of Canada Limited, the Department of Energy, Mines and Resources, the Department of Communications, the Department of Industry, Trade and Commerce, the Ministry of Transport, and the Atmospheric Environment Service of the Department of the Environment. The scientific activities of other sectors of the latter Department are covered in subject chapters as follows: the Marine Sciences Branch, the Inland Waters Branch and the Canadian Wildlife Service in Chapter X, and the Canadian Forestry Service and the Fisheries Research Board in Chapter XIII. Research activities of other federal organizations are also included along with related data in the subject chapters as follows: the scientific work of the Department of National Health and Welfare and the Medical Research Council in Chapter VI; of the Canada Department of Agriculture in Chapter XI; of the Canadian Grain Commission in Chapter XX; and of the Defence Research Board in Chapter XXV.

### Subsection 1.—Expenditures of the Federal Government on Science

Information on the expenditures of the Federal Government on science is secured by annual surveys carried out by Statistics Canada. Each survey covers the actual costs of scientific programs during the preceding fiscal year and estimated expenditures for the following two years. The data presented in this Subsection cover activities in the engineering, physical and life sciences; an experimental survey recently completed on research in the social sciences will form the basis for the annual collection of data in that field in future.

For survey purposes, "scientific activities" consist of research and development (R&D), scientific data collection, scientific information, testing and standardization, feasibility studies, and scientific scholarship programs. R&D accounts for about 77 p.c. of the current expenditures and half of the funds expended for related scientific activities are for scientific data collection. Data are also collected on capital expenditures for scientific activities and on personnel engaged in such activities. It should be noted that the figures given here have been revised to exclude indirect costs which formerly were included in current intramural expenditures.

Total federal expenditures on science continued to increase in the period after 1968-69 but at a lower rate than previously. From 1963-64 to 1968-69, the average annual rate of increase was 15 p.c.; since 1968-69 it has averaged about 7 p.c. In 1970-71, current expenditures on R&D and on related scientific activities increased 13.5 p.c. and 4.6 p.c., respectively, over those in 1969-70 but there was a decrease of 7.6 p.c. in capital expenditures in the same comparison, which was accounted for mainly by lower capital outlay on prototype nuclear power plants.

Table 2 shows federal scientific expenditures classified by type of activity and by major department or agency for the years ended Mar. 31, 1969 to 1972. Table 3 places the amounts expended in 1969-70 and 1970-71 by the major federal departments and agencies in three categories—current R&D, other scientific activity, and capital expenditure. The Department of the Environment, officially created in 1971 to take over the responsibilities of the former Department of Fisheries and Forestry and elements of the Departments of Energy, Mines and Resources, Indian Affairs and Northern Development, Transport, and National Health and Welfare, is now the largest federal spender on science, accounting in 1970-71 for 20.6 p.c. of the total funds applied and over one third of the funds for current related scientific activities. The National Research Council is second, accounting for almost 18 p.c. of the total funds applied and 21 p.c. of the funds for research and experimental development in 1970-71; it provides more than 48 p.c. of the Federal Government's direct support for university research.

Of the current R&D expenditure, about 30 p.c. is industry-oriented; research in the field of natural resources accounts for about 25 p.c.; and free, unoriented, basic research (mainly in universities), health research, and defence research each accounts for 12 p.c.

Since 1963-64, when 68 p.c. of the R&D supported by the Federal Government was performed within its own establishments, the funds provided for outside research have increased steadily. They amounted to about 48 p.c. of the current expenditures in 1969-70 and are expected to reach 51 p.c. by 1971-72. In the latter year, it is estimated that 26 p.c. of the federal R&D funds will go to the industrial sector and 22 p.c. to the university and non-profit sector.

An estimated full-time equivalent of 23,237 persons was engaged in scientific activities in 1970. Of these, 6,320, or 27 p.c., were in the scientific and professional category; 45 p.c. of the permanent full-time scientists and engineers had doctoral degrees, 23 p.c. master's degrees and 30 p.c. bachelor's degrees.

## 2.—Summary Statistics of Federal Government Expenditures on Science, Years Ended Mar. 31, 1969-72

Activity and Department or Agency	1968-69 <sup>1</sup>	1969-70 <sup>1</sup>	1970-71 <sup>1</sup>	1971-72 <sup>2</sup>

## Subsection 2.—The National Research Council of Canada\*

Organized research in Canada on a national basis dates from 1916 when the Federal Government established the National Research Council. Through the years, changes have taken place in organization and functions as the Council's activities have increased. Today, most of its 10 divisions are located on a 400-acre site just east of Ottawa on the Montreal Road. A Prairie Regional Laboratory is located on the campus of the University of Saskatchewan in Saskatoon and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax. Of the Council's 1970-71 appropriation of \$132,000,000, about \$71,000,000 was used for scholarships and grants, \$47,000,000 for the operation of the laboratories and \$6,800,000 for the Industrial Research Assistance Program (see p. 450). In 1971 it had a staff of some 2,800 of whom about 500 held the doctorate degree and about 30 associate committees; in the year ended Mar. 31, 1971, it supported some 4,600 university scientists and awarded 2,900 scholarships, bursaries and post-doctorate fellowships.

**NRC Organization.**—The National Research Council Act (RSC 1970, c. N-14) assigns to the Council but does not limit it to the following functions: (1) utilization of Canada's natural resources; (2) utilization of technical methods and processes used in Canadian industry; (3) maintenance and improvement of the primary physical standards of measurement for Canada; (4) standardization of the quality of material used in public works and of scientific and technical apparatus used in Canadian industry and government; (5) the fostering and carrying out of scientific and industrial research through operation of research laboratories, financial assistance for research activities in Canadian universities, financial assistance and promotion of research in industry, and operation of the National Science Library and the Technical Information Services.

The Council consists of the President, the Vice-President (Administration), two Vice-Presidents (Scientific) and not more than 17 other members appointed by the Governor in Council. The Council is a body corporate and is required to meet at least three times a year. It is responsible to a designated Minister of the Crown, who is a member of the Committee of the Privy Council on Scientific and Industrial Research. Except for the four permanent officers, Council members are appointed for a term of three years and serve without salary. They are drawn from the senior staffs of universities, industry and labour, in an attempt to achieve a broad base of advice as to both scientific discipline and regional representation.

The President, who is the chief executive officer, is assisted by a number of Vice-Presidents and a Délégué Général. The Délégué Général, assisted by a small group of scientists, engineers and economists, is in charge of the formulation of long-range policies and plans, both for the research activities of NRC laboratories and for the support and encouragement of research in universities and in industry; for analyses of existing and alternative NRC projects and programs, taking into account both the scientific and economic aspects; and, in general, facilitating the task of identifying NRC priorities in terms of national needs.

One Vice-President (Scientific) is responsible for industrial research assistance and promotion, and another for the Council's awards program for support of university research. The laboratories and a number of administrative services of the Council come under the jurisdiction of a Vice-President (Laboratories).

Since Apr. 1, 1970, federal research in astronomy has been consolidated under the National Research Council, which is now responsible for the operation of the Dominion Astrophysical Observatory, Victoria, B.C., the Dominion Radio Astrophysical Observatory, Penticton, B.C., the Time Service of Canada, the solar and meteor programs of the Dominion Observatory in Ottawa, and the Meteorite Observation and Recovery Project; the latter is a network of photographic stations with headquarters in Saskatoon, Sask.

\* Prepared (August 1971) by the Information Services, National Research Council, Ottawa. The historical development of the Council is outlined in the 1969 Year Book, pp. 388-389.

The Federal Government has designated the National Research Council as the co-ordinating body for the further development of a national scientific and technical information system (STI), under the general direction of the National Librarian. The integrated national system, encompassing the natural sciences and engineering, will be decentralized and based on the existing resources and systems in industry, the universities and government, all linked together.

**NRC Research Activity.**—The NRC laboratories carry out long-term, applied and specific project research work, most of it industrially oriented although some programs are directed toward important national and regional problems and toward more basic and exploratory back-up research. Quite a number of research projects are carried out on behalf of other government departments and agencies and a considerable amount of staff time is given to consulting on technical problems. In addition, some research projects are undertaken to solve a particular problem, or because of their potential for basically new technology. When successful, the desired end result is the transfer of the new technology to productive channels in Canadian industry. New industries based on NRC-developed technology are beginning to be established, some located in large industrial centres and some in the Ottawa-Hull metropolitan area where they can maintain close contact with NRC laboratories and take advantage of the new technology generated by the laboratories of the Defence Research Board and Atomic Energy of Canada Limited, and of the substantial research activities of several industrial firms in the area.

The research activities of the *Division of Biology* are carried out by eight groups of scientists in the three main areas of environmental, food and radiation biology. In addition, the biomathematics group studies problems of interest to cell biologists and provides assistance on statistical problems to the whole Division. The radiobiology group of DRB's Defence Research Establishment in Ottawa is closely integrated with the NRC Radiation Biology groups. Experimental animal facilities available to all Ottawa laboratories of NRC have been centralized in the Division.

The *Biochemistry Laboratory* is composed of NRC scientists who have a common interest in the study of biological processes at the molecular level including biochemists, organic chemists, physical chemists and physicists. Thus, the Biochemistry Laboratory takes advantage of the unique ability of the Council laboratories to form interdisciplinary groups when desirable and necessary.

To encourage this interdisciplinary approach the Laboratory is not organized formally into sections. Instead, individuals work within one or more main lines of research as collaborations develop on the basis of common interests. The objective is to make significant contributions to the understanding of biological processes and the unifying theme is the relationship between structure and biological activity or function.

During the past year, significant advances have been made in several lines of research. These include: (1) the production and isolation of proteolytic enzymes from bacteria and determination of their amino-acid sequences, specificities and reaction mechanisms; (2) the isolation and characterization of polysaccharide antigens from yeasts, fungi and bacteria; and (3) the application of nuclear magnetic resonance, electron spin resonance and optical rotatory dispersion to study conformations of nucleic acids and model membrane systems.

The work of the *Division of Building Research* continues to reflect its triple role as an information, advisory and research agency serving the construction industry of Canada. About 5,000 inquiries were answered during the past year from the Building Research Centre in Ottawa and from the regional offices of the Division at Vancouver, Saskatoon, Toronto and Halifax. Some 900,000 copies of publications of all kinds were distributed on request, more than half of them accounted for by the monthly *Canadian Building Digest*, which is widely used in the teaching of building science and technology as well as by the industry generally.

The growth of the advisory role of the Division is evidenced by the number of committee memberships of all kinds held by the Division, which now totals 348. The 1970

National Building Code represented a very substantial increase in this kind of activity for the officers who served as technical advisers to the various revision committees. This was in addition to the continuing work of the Codes Secretariat. Also important was the assistance given through committee service to the building standards work of such bodies as the Canadian Standards Association, the Canadian Government Specifications Board, and the American Society for Testing and Materials.

There has been a marked increase in the number of visitors coming for discussion of developments and trends in building, due in part to generally greater interest in industrialization, which is seen by many as a way of improving the industry and of reducing construction costs. The Division continues to provide opportunities for discussion, at the design stage of building, of the principles arising out of the steadily developing building science. Opportunities for communication of the results of research done in Canada and elsewhere are provided by the Building Science Seminars presented each year in Calgary and in Ottawa, the subjects of the most recent ones being air conditioning and durability of materials.

The research work feeds all other activities of the Division. Work on high buildings is continued through projects on wind loads, seismic response of structures and air movement in buildings; the latter has assumed unusual importance because of its close relation to smoke movement. Special studies with the computer were carried out for various operational configurations of typical high buildings, as a contribution to the 1970 National Building Code.

The Sections of the Division are arranged in four groups—two on Building Practice and Codes and Standards, recognizing special areas of responsibility, and two Laboratory Sections. The recently equipped Environmental Laboratory is a substantial addition to the Division's facilities and to its capability of evaluating building components and systems on a performance basis.

The work of the *Division of Chemistry* covers a broad spectrum ranging from relatively short-term programs aimed at practical application to the natural resource and chemical industries, to long-term fundamental investigations in selected areas of scientific and technological importance. The permanent staff of scientists and technicians is supplemented by young post-doctorate fellows from Canada and abroad on temporary appointments. Active fields of research are analytical chemistry, chemical engineering, colloids, high polymers, high pressure physical chemistry, hydrocarbons, kinetics, photochemistry and catalysis, metallurgical chemistry, metallic corrosion and oxidation, textile chemistry, chemical spectroscopy, molecular structures, organic spectrochemistry, organic synthesis, thermochemistry, and theoretical studies. The following research programs typify the work of the Division.

Studies on membrane phenomena have suggested a number of applications for the concentration and separation of constituents of solutions by osmotic action. Considerable potential exists for reverse osmosis as a large-scale engineering process for saline water conversion and other concentration processes. Applications to problems of environmental quality appear to be of particular importance at the present time.

The spontaneous slow oxidation of organic molecules is often a limiting factor in the useful life of fuels, lubricants, foods and textiles. A long-term program of research on autoxidation has made substantial contributions to knowledge of the mechanisms by which these changes take place, and of how they can be accelerated or retarded. The application of this work to the ageing process in animal life has aroused considerable interest from the medical profession.

The work of a laboratory devoted to a special branch of synthetic organic chemistry resulted some years ago in the establishment of an industry that has found a steady market for organic compounds specifically labelled with stable isotopes.

Another laboratory has played a leading part in developing computerized methods for the automation of infrared spectroscopy. A file of some 30 computer programs put into modular form and distributed as a series of bulletins, card decks and tapes has attracted wide

interest from industrial and university laboratories. This laboratory has also been intimately involved, in association with the CODATA Task Group for Computer Use, with the more general problems of computer-based techniques for the evaluation, storage and retrieval of numerical scientific data of various kinds. This work will have important applications in the pharmaceutical and petroleum industries.

The work in the *Division of Physics* is divided into three general areas: the improvement of Canada's social and economic climate by providing new data, concepts and designs to industry and government; the maintenance of physical standards of the highest quality; and the study of particular areas of physics in which the Division has a special competence. These activities are intermixed in sections devoted to acoustics, cosmic rays and high energy physics, electricity, heat, mechanics, metal physics optics, photogrammetry, plasma physics, spectroscopy, time, X-ray and nuclear radiation.

The Division maintains standards equal to the best anywhere in the world in the fields of mass, length, time, electricity, temperature radiation, photometry, colorimetry and acoustics. Besides providing these standards to Canadian industry and governments, the Division has a continuing program of comparisons of Canadian standards with those maintained by the other leading industrial nations, thereby ensuring the acceptability of Canadian measurements in international trade. A third aspect of the standards work in the Division is a program to improve the primary standards so that future measurements will be more convenient and more precise.

During the past year, advances have been made in spectrophotometric capabilities of the laboratory and considerable effort has been devoted to establishing the new international temperature scale. In the optics laboratory, a stabilized laser has been produced which will allow the precision of the standard of length to be improved by a factor of more than a hundred. Research is in progress to establish a standard of voltage by means of the Josephson effect, to improve the time standard by the construction of a more precise cesium clock and to extend the precise measurements of radiation up to the 30 Mev range.

Broad research programs are carried on in the fields of acoustics, cosmic rays and high energy physics, metal physics, nuclear physics, photogrammetry, plasma physics, and molecular spectroscopy. As examples of specific projects either completed or in progress, the metal physics group has developed computer programs which give a good representation of the mechanical properties of simple metals; the photogrammetry section, in co-operation with the Quebec government, has carried out a mapping project in the Hull area to determine the properties of orthophoto maps in large-scale urban mapping; and in the plasma group the properties of laser induced plasmas have been studied on a picosecond time scale.

Many of the studies undertaken in the Division are related to immediate industrial requirements. In the acoustics section, studies of the noise generated by traffic, by snowmobiles and by chain saws have resulted in the preparation of acceptable standards and suggested modifications in the various machines. An instrument that can be towed behind a ship to record temperature and salinity of the water at various depths has been constructed and is being produced commercially. A measuring device particularly useful for photogrammetry, designed by the photogrammetry group, is also being sold commercially and work is progressing on other map-making instruments that appear to have commercial potential. These and other commercial developments have their origin in laboratories devoted to fundamental studies and to standards rather than in laboratories devoted specifically to industrial development work.

About half of the work in the *Division of Mechanical Engineering* in 1970 was concerned with transportation technology, 29 p.c. with manufacturing technology, 11 p.c. with standards and standardization, 7 p.c. with computer application developments, 4 p.c. with medical and surgical instrumentation, and 3 p.c. with engineering and biological control systems.

*NRC's use of high-speed photography is a tremendous aid to industry and research in improving both product and efficiency. Expanding real time with high-speed movies or freezing very short intervals of time permits minute analysis of many events and phenomena not otherwise possible.*

↑ *Evaluating NRC's notched-post system of wire cable retaining barriers, now performing successfully in actual situations.*

*A pellet shatters a light bulb and almost instantaneously breaks an electrical circuit actuating the camera's electronic flash, stopping action at one millionth of a second.* →

Transportation work is about equally divided among land, sea and air developments. Land transportation activity is mainly related to the welding of rails for the Canadian railways, to apparatus for preventing the malfunctioning of railway switches in winter, to gas turbines and compressors for gas pipelines and to the examination of various aspects of container shipping, whether by rail or road. A substantial body of research is directed to special-purpose ships and marine air-cushion vehicles and a large project is under way relating to navigational improvements of the St. Lawrence River in summer and winter.

Air transportation activities relate to the development and certification of new engines. In particular, research and novel investigations have been concentrated on engines appropriate to VTOL aircraft. With a view to the eventual marketing of this aircraft, liaison has been established with potential manufacturers and interested Canadian air carriers as well

as with government departments and agencies at the federal, provincial and municipal levels.

Recent work in the manufacturing field is concerned with the application of two-phase heat transfer pipes to the maintenance of permafrost in areas of arctic construction, and with the de-icing of navigational buoys in waters off the Canadian East Coast. Another project, reaching the exploitation stage by a Canadian company, is the use of high-pressure water jets for cutting various kinds of materials.

Newsletters publicizing manufacturing processes not yet in general use in Canada are being widely distributed and have given rise to a most enthusiastic response through Canadian industry. Examples of the new technologies include the generation by grinding of precision case-hardened gear teeth, the generation of complicated shapes in a variety of materials by electrochemical machining, and the application of numerical control for much greater productivity of machine tools on single articles or small lots. In a number of instances, these technologies have proved of valuable consequence to Canadian industry.

In addition to the calibration of instruments, lubricating oils, fuels and various apparatus for Canadian industry, the various laboratories of the Division have been involved in the certification of the airworthiness of helicopters and various gas turbine engines in conditions of snow and sleet.

Because of the expense involved in the construction of prototype machinery and in arranging complicated experiments even with conventional machinery, the application of computers to the simulation of projected machinery performance has become very important. Typical examples of Division work pertain to the investigation of the parallel operation of compressors on gas pipelines; the transients resulting from changes in operation and the corresponding controls; systems analysis of certain control components and the general control features of a new nuclear power station, and of a hydro-electric power station (in collaboration with the University of the West Indies); dynamics of high-speed railway container cars; and new designs of reciprocating engines.

Work in progress in the development of new instrumentation for medical and surgical purposes ranges from the design of prototype instruments for extremely difficult operations on the spinal cord to final arrangements for production and marketing of a suturing instrument for blood vessels; the first activity is a collaborative one with the Montreal Neurological Institute and Queen's University, and the second is related to the licensing of a Montreal manufacturing firm.

Work continues on the industrial application of control theory—mechanical, electronic and fluidic, and the application of control system technique to animate beings. In particular, a considerable body of work has been accomplished in relation to the effects of microwaves on birds, and work relating to the possible supply of electrical control impulses to the muscular system of paralyzed people has begun. Conversely, progressively more detailed investigations are being made of biological control systems as possible models for better and more reliable engineering systems.

The *National Aeronautical Establishment* conducts aeronautical research to meet the needs of military and civil aviation, working in co-operation with the Canadian aircraft industry; it also carries out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics. It has the only development wind tunnel facilities in Canada and is thus equipped to handle most of the industrial or military aircraft developments of the foreseeable future. Aerodynamics research from low speeds up to about 17 times the speed of sound is carried out in the wind tunnels; considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the theory of structures, fatigue and fracture, flight load statistics and aircraft hydraulics. The flight mechanics program covers research

on flight safety and flying stability and control, the development of a crash position indicator for locating crashed aircraft, atmospheric physics, and anti-submarine magnetometry.

A growing and highly diversified program of assistance to smaller industries is developing, the work relating mainly to product development, improvement or testing. Concerning aircraft utilization, efforts have been directed toward those areas of national activity where aerial methods might offer economies in cost or improvements in effectiveness, such as agricultural applications, forest fire fighting, aerial logging, high sensitivity magnetic surveys, precipitation physics, and studies of atmospheric turbulence.

The work of the *Radio and Electrical Engineering Division* includes engineering projects of interest to Canadian industry and fundamental research in electrical science. The engineering program in the high-voltage field includes studies of corona loss and radio interference from direct-current transmission lines, and the development of current comparators for very accurate measurement of current and voltage ratios. The high-frequency laboratory is responsible for maintaining the national standards of RF power, voltage, impedance and attenuation and has recently participated in an international intercomparison of these standards. Assistance is given to industry in the design, production and evaluation of new equipment, and in the solution of such problems as the design of antennas and of microwave film and paper dryers and moisture sensors. Many devices have been patented including a radar altimeter, now in commercial production, which is used in taking inventory of forests by photogrammetry.

In the field of bio-medical engineering, new techniques in electrocardiography and echoencephalography have been developed, a study of cardiac stimulation thresholds is under way and instruments that will contribute toward the rehabilitation of handicapped persons have been produced. The Division has co-operated with members of the medical profession in the establishment of safety standards in the use of electronic equipment in hospitals for treatment and diagnosis.

Much of the research effort in the computer laboratories of the Division is concentrated on the problem of communication between man and computer. Computer graphics techniques have been adapted to provide a versatile tool for the film animator and for the composer of music. Problems arising in computer-aided learning systems are being investigated, and a touch-sensitive screen has been designed and patented, an extremely flexible

*A blind NRC scientist has, in the past 20 years, produced close to 100 instruments and devices for increasing the mobility and job skills of the sightless, one of which is a light detector that enables a blind switchboard operator to locate the flashing light that indicates an incoming telephone call.*

input device that permits an untrained person to communicate effectively with a computer. Special data recording and analysing systems have been developed to suit widely varying scientific programs.

Fundamental research is carried out in solid state physics, wave propagation, quantum electronics, and the behaviour of particles at ultrahigh vacuum.

Research in astronomy and related fields is conducted by the Astrophysics Branch at several locations in Canada. Optical studies of stars and other celestial bodies are undertaken at the Dominion Astrophysical Observatory at Victoria, B.C. The major instruments of this observatory are reflecting telescopes of 72-inch and 48-inch aperture equipped with powerful spectrographs. The Branch operates two radio astronomical observatories. The Algonquin Radio Observatory in Ontario is equipped with a variety of instruments, the major one being a powerful 150-foot (46-meter) parabolic telescope. Facilities at the Dominion Radio Astrophysical Observatory in British Columbia include telescopes for low-frequency observations and for studies of neutral hydrogen in interstellar space.

Observations of radio solar emissions are made at both the Algonquin Radio Observatory and the Dominion Radio Astrophysical Observatory, and optical studies are carried out at the Ottawa River Solar Observatory near Ottawa. Other fields of research include the study of meteors and meteoric phenomena by optical and radar methods and from rockets and study of the physics of the upper atmosphere and the aurora.

The function of the *Space Research Facilities Branch* is to develop and provide facilities to meet the needs of the upper atmosphere and space research programs of Canadian scientists in universities and government agencies. At present, its work is restricted primarily to the use of sounding rockets. The major launching site is the Churchill Research Range, a Canadian facility operated for the benefit of both Canadian and foreign scientists. It has facilities for the launching of most types of sounding rockets and balloons carrying scientific experiments to investigate the earth's upper atmosphere. Associated ground-based instruments are available to study the aurora borealis by photographic and spectrophotometric methods. There is also, for occasional use, a small launching facility at Resolute in the Northwest Territories, and a temporary facility was established at East Quoddy, N.S., for use in studies of the solar eclipses of 1970 and 1972. The Branch also operates the Great Whale Geophysical Station at Poste-de-la-Baleine in Quebec, which records auroral phenomena for Canadian and United States scientists.

In the implementation of the sounding rocket program, the Branch is responsible for providing the vehicles and incorporating the scientific experiments into suitable payloads with associated telemetry and other devices; this work is carried out mainly by industrial contracts. The work of the Branch also includes the reduction of flight data to provide vehicle trajectory and attitude information to experimenters, and the provision, from the telemetered information recorded on magnetic tape, of data required by individual scientists in any form desired.

The *Atlantic Regional Laboratory* at Halifax in Nova Scotia is engaged in practical and fundamental studies in chemistry and biology related to the resources and industries of the Atlantic Provinces. Such studies include investigations of: the biochemistry and physiology of marine algae, fungi, bacteria, lichens, mosses and higher plants; the chemistry of naturally occurring organic compounds; and the physical chemistry of inorganic compounds at high temperatures. A major objective is to develop varieties of seaweeds with enhanced commercial value and to investigate the growth and cultivation of seaweeds and other marine algae. Surveys are being made to reveal new sources of seaweeds. An applied project on toxic microfungi in pastures is being carried out in collaboration with the Canada Department of Agriculture at Nappan, N.S. Fundamental studies on inorganic reactions at high temperatures may be of value to the steel and glass-making industries, and research in organic reactions, which includes work on methods of synthesis, may also eventually have industrial value. Some of the work in biochemistry and physiology is related to medicinally important compounds such as antibiotics and drugs that affect mental processes.

One of the aims of the *Prairie Regional Laboratory* at Saskatoon in Saskatchewan is to develop wider uses for crops grown on the Prairies. The Laboratory program is carried out by five sections: physiology and biochemistry of fungi, physiology and biochemistry of bacteria, plant biochemistry, chemistry of natural products, and engineering and process development. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents, such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties and facilities have been set up for the systematic study of extractives from local plants and shrubs.

Developments from the Laboratory attracting commercial interest are: the production of feed supplements by direct use of micro-organisms, and specific essential amino acids such as lysine; poly-hydroxy alcohols such as glycerol and arabitol; hydroxy fatty acids; and the possibilities of producing specific glyceride types using the enzyme systems of micro-organisms. The Laboratory works in co-operation with the Canada Department of Agriculture to help maintain Canada's position as the world's leading exporter of rapeseed, used to produce cooking oils, dressings and oil for use in margarine and shortening. A group working in the field of mycology is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

**University Research Support.**—From its inception, the National Research Council has encouraged and supported research in Canadian universities. A system of postgraduate scholarships and post-doctorate fellowships gives assistance to students, Canadians and landed immigrants who have shown promise of research ability. The awards are: Post-doctorate Fellowships; Postgraduate Scholarships; Bursaries; 1967 Science Scholarships; Post Industrial Experience Research (PIER) Fellowships; and Postgraduate Scholarships in Science Librarianship and Documentation. Awards are for advanced studies and/or research in science and engineering and are competitive, with academic excellence being the main criterion in the selection of successful candidates. In addition, the Council in 1970 introduced an Industrial Post-doctorate Fellowship program for the support of research in Canadian industry which is intended to encourage highly qualified science and engineering students to seek careers in industry.

Post-doctorate Fellowships and Industrial Post-doctorate Fellowships are awarded to candidates who have recently completed or who are about to complete their requirements for a doctorate degree. The purpose of the two programs is to enable those who have received a doctorate degree to undertake, prior to becoming permanently employed, post-doctoral research for up to two years after receiving their degree. Post-doctorate Fellowships are tenable in Canadian universities and in universities and other institutions abroad; Industrial Post-doctorate Fellowships are tenable in industrial organizations in Canada. Postgraduate Scholarships are awarded for tenure in Canada and a successful candidate may elect to carry out his program at the Canadian university of his choice; however, where facilities for a Ph.D. program are limited or lacking in Canada, the candidate may receive special permission to hold his scholarships at a university abroad.

Canadian universities receive an annual quota of bursaries from NRC and are responsible for the selection of students for these awards. They are not transferable and are tenable only at the university that nominated the student for the award.

The 1967 Science Scholarships, introduced to celebrate the centennial of Canadian Confederation and the 50th anniversary of NRC, are intended to encourage young men and women of outstanding intellectual promise to pursue postgraduate studies and research

leading to doctorate degrees, as well as to stimulate exchanges of students between different cultural and geographical regions in Canada. Scholars must select for graduate studies a university other than the one from which their first degree was obtained.

Post Industrial Experience Research (PIER) Fellowships, introduced in 1966, provide an opportunity for persons with industrial experience to gain additional research experience and training. A limited number are made available each year to candidates who have had not less than five years of industrial experience.

Postgraduate Scholarships in Science Librarianship and Documentation, introduced in 1967, are intended to encourage graduates with a degree in science or engineering to become science librarians, documentalists or science information specialists in an effort to meet the demand by universities, research laboratories, industrial firms and related organizations for qualified persons in this field.

**Assistance to Industry.**—The application of science to industry has been a major concern of NRC since its founding. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 70 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited, a subsidiary of NRC.

In an effort to improve the co-ordination of the various agencies of government concerned with administration of industrial assistance programs, a study group has been formed of the major participants, including the Department of Industry, Trade and Commerce, the Defence Research Board, the Department of Finance, the Treasury Board and NRC. This group is active in its efforts to devise improved incentive programs. Staff members of NRC have organized meetings with representatives of Canadian research management, and from these there is emerging a much clearer picture of the problems of industrial research and development in Canada.

During nine years of operation, some \$90,000,000 has been invested in the Industrial Research Assistance Program (IRAP) administered by NRC, with industry contributing approximately 58 p.c. of the total cost. The number of projects funded during the year ended Mar. 31, 1971 was 204, tenable in 136 companies. For the first time since the inception of the program in 1962, and as a result of continuing encouragement to companies in these provinces, projects are being supported in Nova Scotia and Saskatchewan. The highest level of research activity continues to be in the chemical, electrical, pharmaceutical and paper and allied products industries although, in 1969-70, an increase was apparent in the electronics and instrumentation areas.

With the time interval between research discoveries and the appearance of an improved product in the marketplace measured in decades, it is too early to forecast the effect of the program on the Canadian economy. The rate of growth of the IRAP in the early stages was governed by a shortage of senior scientists and research engineers, time needed to build laboratories and the share of company funds available to match government assistance. Recent reports from companies participating in the program reveal a considerable change with a substantial increase in staff, in the purchase of sophisticated research instruments and in capital expenditures which have more than doubled since the Program started.

The number of small companies applying for IRAP assistance is growing rapidly and there are a number of case histories showing that small companies can do highly successful research and development with the appropriate incentives. A close working relationship has been effected between the industry group, some 40 university professors in a consulting capacity, and approximately 100 scientists as advisers or liaison officers from government laboratories. This new link between industry, university and government is improving communication and providing a feedback of industrial activities and requirements into the universities and government laboratories.

**Technical Information Service.**—NRC has a Technical Information Service (TIS) which was established in 1945 to help, on request, small secondary manufacturing industries to keep pace with advances in research and technology. TIS today maintains direct contact with industry through a system of field offices and provides, without cost, information and advice on technological matters.

The Industrial Engineering Section has nine industrial engineers in the field and three in Ottawa, who are applying their engineering knowledge to help small companies on a do-it-yourself basis in resolving their operating problems. This is done through information, guidance and assistance in the analysis of work situations, improvements in production processes and facilities, and implementation of systems by which management can operate and control production processes for optimum results.

The Technical Developments Section further facilitates the flow of technical information to Canadian industry. An experimental program is being carried out with the co-operation of some 3,000 companies each of which has provided TIS with a listing of its areas of industrial interest; these are matched by computer with the information items held by the Technical Developments Section and selected lists are issued to each company.

Engineers in the TIS field offices visit or contact thousands of small companies in every part of Canada and answer written or verbal inquiries numbering well over 10,000 a year. Problems requiring information in greater depth are referred to the Ottawa staff who draw upon experience with previous inquiries, the National Science Library, experts in government departments and industry, and foreign information services for suitable information which is forwarded to the enquirer, sometimes accompanied by suggested solutions to their problems.

**The National Science Library.**—Plans for developing a central scientific library were proposed as early as 1924 by the Honorary Advisory Council for Scientific and Industrial Research, established in 1916, now the National Research Council of Canada. The Library grew slowly until 1928 when temporary research laboratories were established near the present Sussex Drive building which was opened in 1932. Since then it has been developed to parallel the growth and expansion of the laboratories and the national interests and activities of the Council with the result that in 1953, under an agreement with the more

*A new \$12,844,000 building to house the National Science Library is under construction at the Montreal Road site of the National Research Council and will be completed by 1973. It will have stack space for 2,000,000 volumes and its facilities will permit the employment of the latest techniques for the storing, retrieving and disseminating of scientific information.*

recently established National Library, the National Research Council Library formally assumed responsibility for national library services in the fields of science and technology, a responsibility confirmed by Act of Parliament in 1966. In 1967, the President of the Association of Canadian Medical Colleges recommended to the Government that responsibility for national services in the medical and health sciences be assigned to the National Science Library.

The National Science Library now serves as the focal point of a national scientific and technical information network. Through co-operative measures with both national and international information agencies, its activities are designed to provide the Canadian scientific and industrial communities with direct and immediate access to resources and services not available locally. Increasing use is being made of computer and related electronic data processing equipment to organize, retrieve and expedite the dissemination of information. One such service is a selective dissemination of information (SDI) system available on a regular (weekly or bi-weekly) subscription basis to Canadian scientists and engineers. The Library's collection, which is doubling in size every ten years, comprised approximately 850,000 volumes at the end of March 1971. Most of this material, including journals and other serials, books, pamphlets and technical and research reports (many in microform), is housed in the main Library with smaller and more specialized collections in eight branch libraries.

The resources of the Library are made available by means of an extensive inter-library loan and photocopying service. This service also identifies references to obscure publications and, if necessary, attempts to locate holdings elsewhere in Canada or abroad. For purposes of current awareness, the Library issues twice a month its *Recent Additions to the Library*. The *Union List of Scientific Serials in Canadian Libraries*, prepared by the Library with the co-operation of other libraries in Canada, records the title, holdings and location of approximately 40,000 scientific and technical journals received by over 200 libraries in Canada. The data for this publication is stored on magnetic tape and updated regularly for computer print-out as new editions are required.

Librarians trained in science or engineering and subject specialists provide a reference and research service to meet Canadian needs for information. Many inquiries require carrying out a literature search and preparing a list of relevant references. Other requests for information may be answered from the staff's own knowledge or with advice from the scientific and technical personnel of the Council and other government departments and agencies.

The *Canadian Index of Scientific Translations*, a card index to the location in Canada or elsewhere of translations of articles written in foreign languages, is maintained by the Library. Translations of scientific articles prepared by the Library's Translations Section are listed and made available in Canada and abroad. A complete English translation of the Russian journal *Problemy Severa* (*Problems of the North*) is also prepared by this Section. The National Science Library publishes the *Directory of Canadian Scientific and Technical Periodicals*, *Conference Proceedings in the Health Sciences*, *Scientific and Technical Societies of Canada*, *Scientific Policy, Research and Development in Canada* (a bibliography), and other publications related to its own activities.

The National Research Council, under the general direction of the National Librarian and in concert with existing information organizations, is in course of developing a national scientific and technical information system encompassing the natural sciences and engineering and has appointed an advisory board of directors with responsibility for formulating general policies and guidance toward their implementation.

**Associate Committees.**—NRC's associate committees provide an important instrument for studying, co-ordinating and promoting research on problems of national significance. The members of these committees are experts in the different aspects and disciplines related to the problem and are drawn from university, industry and government laboratories. The committee studying a particular problem collects and collates the

necessary information, delineates research problems, co-ordinates research and may initiate new research necessary to the solution of the problems. Each committee has defined objectives and when these are accomplished the committee is disbanded. Currently, more than 30 associate committees are operating in such diverse fields as aerodynamics, bird hazards to aircraft, protective coatings research, plasma physics, and soil and snow mechanics. Some associate committees also function as national committees for an international scientific union.

An Associate Committee on Scientific Criteria for Environmental Quality has been established by the Council to collate and publish an integrated set of scientific requirements on which an evaluation of the quality of the environment can be based. The criteria will be designed to assist those at the federal, provincial and municipal levels who have responsibility for the formulation and enforcement of environmental quality standards.

**International Affiliations.**—NRC maintains a scientific liaison office in London, England, for the exchange of scientific information and also has a scientific exchange agreement with the Soviet Academy of Sciences that provides for visits of scientists ranging in

*Knowledge of Canada's arctic tundra is essential to the understanding and maintenance of its environmental quality. To obtain this knowledge, Canada has launched a comprehensive ecological study on Devon Island, 1,800 miles north of Winnipeg. The research is being conducted by scientists from five Canadian universities under the auspices of the Canadian Committee for the International Biological Program.*

duration from three weeks to nine months; the Council has accepted responsibility for exchange of Canadian scientists with France under the Cultural Agreement between the Governments of Canada and France, and an agreement on scientific exchanges has been concluded with Brazil.

In addition, NRC administers a number of international programs for exchanges of scientists and scientific information. It also supports Canadian membership in organizations such as the International Scientific Unions, helps to finance scientific congresses in Canada, and aids Canada's participation in world scientific projects.

### Subsection 3.—Atomic Energy of Canada Limited\*

A number of large nuclear electricity generating stations are being brought into operation in Canada, Pakistan, and India, all stemming from the "heavy-water moderated" type of nuclear reactor introduced and developed by Atomic Energy of Canada Limited (AECL). A brief review of them and other large scale engineering activities will serve to show how closely the research and development work of AECL is linked to activities that form an important part of the national economy.

Heavy water (deuterium oxide) had been chosen for slowing or "moderating" the neutrons from nuclear fission to maintain the fission chain reaction in the experimental NRX reactor at Chalk River. The virtue of heavy water in permitting high power density had been demonstrated in the operation of NRX from 1947-52 when a thermal power of 30,000 kilowatts was attained using less than 10 tons of natural uranium fuel. The power was raised to 40,000 kilowatts in 1954. The 200,000-kilowatt experimental NRU reactor designed and constructed in 1950-57 uses heavy water for both coolant and moderator and its fuel is changed with the reactor at power without shutting down. In the NRX and NRU reactors, the temperature of the coolant was too low to generate steam for power, but in 1951 it became clear that a heavy-water power reactor could be designed that would have a very low fuelling cost compared with coal. The first design employed a pressure vessel to contain the hot coolant, but in 1956 the promising performance of zirconium alloys allowed the preliminary design of the power reactors now coming into large-scale use. This design, given the name CANDU (CANada-Deuterium-Uranium), retains the desired fuelling economy and makes it the only type yet in operation anywhere in the world that can claim the designation of "near-breeder" and "advanced converter" with an expectation that the type will remain economically competitive for the foreseeable future. Moreover, it could meet the power needs of the whole world for many hundreds, and possibly, thousands of years if operated with fuel recycling on enriched uranium and thorium as fuel. All the reactors so far built have been designed to operate on natural uranium fuel, but fuel recycling is possible.

By virtue of its success with nuclear generating stations, Canada was able to make a strong presentation at the Fourth United Nations International Conference on the Peaceful Uses of Atomic Energy in September 1971. During the month of July, 8 p.c. of the electricity supplied by the Ontario Hydro system was generated by nuclear energy from the 200,000-kilowatt Douglas Point station and the first 540,000-kilowatt unit at the Pickering station near Toronto. Moreover, the Gentilly 250,000-kilowatt station being commissioned for Hydro Quebec had reached 45 p.c. of its designed output. The second 540,000-kilowatt unit at Pickering also started up during the Conference. All four reactors are of the CANDU type.

The heavy-water moderator is held at low pressure in a tank threaded by separate channels containing the nuclear fuel in the form of bundles of small, short rods. The heat is transferred from the fuel by a heat transport fluid or caloporteur which in the Ontario Hydro reactors is heavy water under pressure, and in the Hydro Quebec reactor is ordinary or "light" water that boils. A third caloporteur, a specially developed type of hydrocarbon oil, or organic liquid, has given outstanding performance at higher temperatures (e.g.,

\*Prepared by Dr. W. B. Lewis, Senior Vice-President, Atomic Energy of Canada Limited, Chalk River, Ont.

400°C or 750°F) in an experimental CANDU reactor developing 40,000 thermal kilowatts; this, the WR-1 reactor, is located at AECL's Whiteshell Nuclear Research Establishment in Manitoba. This organic liquid, in conjunction with thorium fuel and enriched uranium, promises to allow a reactor to operate at more than three times the power density of existing installations and so reduce its capital cost. Moreover, the operating costs are expected to be much lower, for, after five years operation of WR-1, the caloporteur circulating pumps and piping show negligible radiation levels and allow easy maintenance.

In addition, 1971 has seen the successful start-up of KANUPP, a generating station using a CANDU reactor of 125,000 kilowatts rating designed and built by the Canadian General Electric Company in Pakistan near Karachi. Four more 200,000-kilowatt CANDU reactors are under construction by the Department of Atomic Energy in India.

Operating difficulties initially experienced with the Douglas Point generating station have been largely overcome and fuel has been changed routinely with the reactor at power since March 1970.

The success of these operating reactors has not lessened the demand on AECL for supporting work of many kinds. In particular, a shortage of heavy water for new reactors is foreseen resulting from the failure of a production plant commissioned from private industry. AECL has now been assigned responsibility for rebuilding and commissioning this plant. Meanwhile AECL is building a larger plant at Bruce, close to Douglas Point in Ontario.

The large-scale engineering work undertaken by AECL has also included the construction of a high-voltage DC transmission line to bring power from the Nelson River in northern Manitoba to Winnipeg. This line has been successfully built but manufacturing problems have delayed much of the power conversion equipment.

AECL has continued to expand its production of radioactive cobalt-60, used in radiation teletherapy units for cancer treatment throughout the world and also for industrial plants for the sterilization of packaged medical supplies and similar purposes.

The very small low-energy nuclear reactor—SLOWPOKE—brought into operation at Chalk River in 1970, has been moved to the University of Toronto for use principally in the neutron activation analysis of materials at low levels of concentration, such as mercury in foods. A second SLOWPOKE with some refinements has been brought into operation at AECL Commercial Products in Ottawa.

The aluminum vessel forming the core of the NRX reactor at Chalk River since 1954 had corroded in some areas and was replaced at the end of 1970 in an operation that was most satisfactorily completed in 130 days. Preparations have been made for replacing the reactor vessel in the larger NRU reactor at Chalk River that has operated since 1957.

Over the past few years there has been growing public concern about pollution of the environment. For many years AECL has had an environmental research branch at Chalk River, and has been able to study the problems of radioactive waste management in a secluded area. This area is on bedrock that forms a basin with only one water outlet, a small creek which is monitored to assure that the outflow meets the radiation levels permissible for drinking water. Should such levels be approached, it is possible to raise the weir level to increase the dilution or to process the whole stream. Glass blocks containing high levels of strontium-90 and caesium-137 were buried there in 1959 and the levels of activity in the surrounding ground water have been followed and found to be satisfactorily low. Such a method of managing wastes appears preferable to any disposal in an area at a distance from an operating plant. Radiation levels are far below those where biological effects can be expected, but by sensitive detectors it is possible to follow any movement of radioactivity within the management area. It seems likely that the CANDU reactors will be easily managed without imposing any burden on the environment. In order to obtain independent monitoring, AECL many years ago passed over to the Department of National Health and Welfare responsibility for the radioactive monitoring of public water supplies, discharges into rivers, and radioactivity from the atmosphere that may enter milk supplies by settling on vegetation.

Fundamental research has always been, and must remain, the basis of AECL's development. AECL's primary research tools are the reactors. The three large reactors, NRX, NRU and WR-1, are major research installations providing facilities in their cores for irradiation of materials over extended periods. Special isolated fuel channels, or loops, are provided for the in-reactor testing of different types of fuel and coolant systems—this testing being fundamental to further development of the Canadian power reactor program. Additionally, horizontal holes through the reactor shielding allow intense neutron beams to be directed to various test rigs. One such rig (in NRU) includes a fast beam "chopper" allowing time-of-flight studies on neutron interactions with matter. In-reactor loops, at CRNL and WNRE are complemented by out-of-reactor test rigs which, apart from the radiation field, simulate reactor fuel channel conditions.

Commissioning of a new out-of-reactor research facility designed specifically for investigation of the BLW and the Advanced BLW reactor concepts was completed in 1971. This test rig uses Freon as a coolant, and is designed to simulate a variety of power reactor conditions. With three full-size test sections, the loop will provide realistic test facilities for any CANDU type of fuel configuration at present envisaged. The use of Freon (with its low vapour pressure) as a modelling fluid to simulate water provides a considerable saving in both construction and power costs.

A further major research tool at Chalk River is the 10 megavolt "MP" Tandem Van de Graaff Accelerator. Among its many uses are precise studies of the structure and excited states of heavy atomic nuclei. Data acquisition and analysis equipment associated with the accelerator is on-line to powerful data processing systems. The accelerator is undergoing modifications to uprate the machine to 13 megavolts which will provide higher particle energies and considerably increase its research potential.

In the field of technical information the introduction of mechanized systems is progressing. The main CRNL library—Canada's national repository of nuclear literature—has successfully introduced computer control of book circulation and periodical renewal and budgeting. Experimental operation of a computerized current-awareness service has started—initially serving AECL staff but later to be extended on a national basis. Additional technical information activities included the co-ordination of the 17 Canadian papers presented at the Fourth United Nations Conference on the Peaceful Uses of Atomic Energy, and preparation of supplementary material for this conference.

As previously mentioned, Whiteshell Nuclear Research Establishment is specifically oriented toward investigation of materials for advanced reactors. The establishment's research reactor, the organic-cooled WR-1, is undergoing modification to replace its stainless-steel fuel channels with channels of Ozhennite—0.5. The comparative "transparency" to neutrons of zirconium will permit a reduction in fuel enrichment and a 50-p.c. increase in neutron flux. Additionally, the reactor core is being increased in size from 37 fuel sites to 54, improving the flexibility and capacity of the reactor to deal with experimental programs. Two in-reactor organic loops have been commissioned in WR-1, both of which, at 4.5 megawatts each, are of higher power than the existing water-cooled loop. A fourth loop is under construction.

Out-of-reactor loop work at WNRE has been devoted to investigation of liquid metal coolants, which offer higher temperatures than the organic liquid. Three lead-bismuth loops (one at 630°C, the others at 800°C) have provided much information on liquid metal heat-transport systems, and a fourth facility using molten lithium is being commissioned.

A terminal unit and data-link at Whiteshell, installed in 1971, now provide the Establishment with direct access to CRNL's powerful CDC 6600 computer system. A similar link serves Power Projects.

Other projects at Whiteshell include work on radiation field measurement techniques in confined spaces (such as inside reactor cores), investigation into fundamental biological mechanisms and the effect of radiation (especially low-dose exposure) on them, and materials research—particularly oriented toward fibre-reinforced ceramics.

Radioisotopes made in the Chalk River reactors are marketed through Commercial Products for use in medical applications for diagnosis, therapy and research. Radioactive tracers are also used significantly in agricultural research by a number of groups throughout Canada.

The Commercial Products group, well established as a world leader in the design of cancer therapy equipment, introduced a new cobalt-60 therapy machine, known as the Brachytron. This instrument can remotely locate up to three small cobalt-60 sources in body cavities for internal radiation therapy and represents a great advance over the existing treatment techniques using manually positioned external sources.

Under a contract with the Task Force on Oil Pollution, measurements of the trace elements in oil samples from known sources are being made. It is hoped that this could lead to the setting up of a file of distinctive features, enabling identification of oil-pollution sources. Commercial Products has also introduced a trace-element analysis service for government and industry. Employing neutron-activation analysis techniques, the service can identify elements and their quantities in submitted samples. This service has special application in the determination, for example, of various contaminants in food sources and human tissue.

The transportation of radioactive materials is subject to specific regulations, and many developments have been made over the years to ensure that these can be met.

The advent of the Nuclear Weapons Non-Proliferation Treaty and the safeguards against fissile material diversion, inspected by the International Atomic Energy Agency, has led to special developments of instruments and procedures.

Despite the increasing load of development work, a high quality of active research has been maintained, as has collaboration with other laboratories in universities and research institutes in Canada and abroad.

**Relations with Other Organizations.**—A strong feature of the Canadian organization for atomic energy is that the regulatory body—the Atomic Energy Control Board (AECB)—is separate from the chief executive agency (AECL). This, however, does not preclude close working relations. The President of AECL is, *ex officio*, a member of the Control Board and AECL staff are members of several AECB advisory committees.

AECL shares with the Department of Industry, Trade and Commerce a desire to increase the participation of Canadian industry in the developing nuclear market and AECL's many overseas interests involve relationships with the Department of External Affairs and the Export Development Corporation.

While AECL does not make grants to universities, research contracts are negotiated in many cases where the university has the necessary facilities and expertise. Some 20 Canadian universities undertake such work for AECL. However, the close relations that have been built up with universities are mainly the result of personal contacts. During the summer, many graduates and undergraduates of Canadian universities work at AECL establishments. A number of professors also use AECL facilities for research projects, a service which, due to the demand, is now available throughout the year under the aegis (at CRNL) of the Experiments Advisory Committee, a joint universities and CRNL committee. It is also noteworthy that some 60 former AECL staff now hold staff positions at Canadian universities.

AECL has encouraged and fostered Canadian industrial participation in many aspects of its program, by the award of research and development contracts, and the employment of professional and consulting services. Development contracts have contributed materially in qualifying Canadian companies to supply services, materials and equipment to the exacting standards required in the nuclear industry. As a result, two Canadian companies are now established as qualified and competitive suppliers of nuclear fuels. In other cases, qualification results from trial orders, supported by the provision of a prototype or samples, specifications and assistance from the laboratories and technical staff.

**International Relations.**—International relations have always been an important feature of Canada's nuclear program. Many irradiations in the NRX, NRU and WR-1 reactors have been made for several countries at their expense or on a shared-cost basis, notably for the United States, the United Kingdom and Euratom. In exchange for information on the Canadian power reactor program, the United States carried out an agreed research program in support of AECL's work. Technical meetings and the exchange of reports have maintained contact between the United Kingdom steam generating heavy-water power-reactor project and the Canadian program. Informal exchanges of visits and information with France and Italy have taken place for many years. Italian relations have been strengthened and put on a more formal basis recently with the maintenance at CRNL of a full-time Italian liaison office. Close relationships also exist between AECL and the Department of Atomic Energy (DAE) in India, the first Canadian-designed research reactor to be built outside Canada (CIRUS) being built near Bombay in a co-operative program, partly supported by the Colombo Plan. AECL also designed India's first heavy-water nuclear power station, the Rajasthan Atomic Power Project (RAPP), now under construction in a co-operative program. This will consist of two 200-megawatt reactors, each very similar to Canada's Douglas Point station.

Additionally, formal arrangements for information exchange have been established with Australia, the Federal Republic of Germany, Japan, Romania, Spain, Sweden, Switzerland and the Soviet Union.

AECL is represented on numerous international organizations and committees. Its Senior Vice-President, Science, represents Canada on the United Nations Scientific Advisory Committee to the Secretary General, and is also a member of the International

*Delegates to the UN Fourth International Conference on Peaceful Uses of Atomic Energy view a device developed within a joint Canada-United States program called TRUST. The aim of the program is to design devices to support safeguards inspectors working under the terms of the Treaty on the Non-proliferation of Nuclear Weapons.*

Atomic Energy Agency (IAEA) Scientific Advisory Committee. Canada is a member of the Board of Governors of the IAEA and participates in advisory panels, conferences and symposia arranged by this organization, and also plays an important part in the development of the International Nuclear Information System (INIS), which is providing a worldwide nuclear information service. Canada is a major participant in the United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR) as well as other *ad hoc* United Nations Committees. AECL also contributes to the activities of the International Commission for Radiological Protection, the International Nuclear Data Committee, the European Nuclear Energy Agency and the International Council of Scientific Unions.

The Fourth United Nations Conference on the Peaceful Uses of Atomic Energy, mentioned on p. 454, was attended by 4,000 delegates and observers from 79 countries, and has profound significance. Firstly, it has served to emphasize the extremely rapid rate of progress being made in nuclear science—it is, after all, less than 40 years since Rutherford and his research team were investigating the structure of the atom and now nuclear power reactors with outputs of the order of hundreds of millions of watts are operating. Even more significantly, the tremendous potential of nuclear power has proved to be a major force in promoting true internationalism—with no other activity has the world seen such a high degree of international co-operation. The necessity for such co-operation is becoming increasingly obvious—the prospect looms of a world population of 15,000,000,000. Applications of radiation and radioisotopes to agriculture and medicine are beginning to provide some of the answers that will help the world support its millions and provide them with the fundamental amenities, but the major problem remains one of power supply. It has been estimated that a 15,000,000,000 population would require 300,000 gigawatts (1 gigawatt =  $10^9$  watts) of energy. Canada's presentation at the Geneva Conference indicated that the CANDU reactor system has reached the stage from which it could make a major contribution. Not only is the system advanced in development, but resources of uranium and thorium are more than sufficient for the foreseeable future.

#### CHRONOLOGY OF NUCLEAR POWER IN CANADA

- 1942-43 Research scientists from Cavendish Laboratories, England, arrived in Montreal to continue work on atomic bomb project.
- 1944 Under auspices of National Research Council (NRC), work started on Chalk River Nuclear Laboratories (CRNL).
- 1945 First working reactor, ZEEP (Zero Energy Experimental Pile), outside of the United States attained criticality at CRNL.
- 1947 NRX (National Research Experimental) reactor came into operation at CRNL. Initial power 38 megawatts(thermal)
- 1952 Formation of Atomic Energy of Canada Limited as a Crown corporation. Commercial Products transferred from Eldorado Corporation to AECL.
- 1957 NRU (National Research Universal) reactor came into operation. Design power 200 megawatts(th).
- 1962 NPD (Nuclear Power Demonstration) generating station started operations at Rolphton, Ont. Power 22 megawatts(electrical).
- 1964 WR-1 reactor came into operation at Whiteshell Nuclear Research Establishment, Man., using mixture of organic fluids as coolant—Canada's first organic cooled reactor. Initial power 40 megawatts(thermal).
- 1965 First Canadian full-scale prototype power reactor started up at Douglas Point. Heavy-water moderated, heavy-water cooled reactor, with output of 208 megawatts (electrical).
- 1970 Gentilly boiling light-water cooled power reactor attained criticality near Trois-Rivières, Que. Power output to be 250 megawatts (electrical).
- 1971 Pickering I came into operation. Power output 540 megawatts (electrical). Pickering II attains criticality.

#### Subsection 4.—Scientific Activities of the Department of Energy, Mines and Resources\*

The objective of the Department of Energy, Mines and Resources is to ensure the full and effective use of Canada's energy and mineral resources for the benefit of all Canadians. Its mandate encompasses the development, co-ordination and implementation of federal policy governing energy and mineral resources and the carrying out of research to obtain the scientific, technical and economic information basic to the making of such policy. The Department comprises three sectors—Energy Development, Mineral Development and Science and Technology.

**Energy Development.**—The tremendous growth in energy consumption in the world's industrialized nations and the increasing awareness that Canada's energy resources constitute a precious and not inexhaustible patrimony whose use must be carefully planned and regulated have given new weight and responsibility to the Department's Energy Development Sector. Its experts deal with such questions as the reserves in fossil fuels, uranium and water power, availability of energy for export, regional disparities in energy development, transportation systems, conservation of energy and the environment on land and in the offshore, technological questions, and many more. On the basis of such studies and the resultant recommendations, the Federal Government develops its policies in the energy field.

**Mineral Development.**—The Mineral Resources Branch identifies and evaluates trends affecting Canada's mineral industry by studying the entire spectrum of mineral industry activities from geologist to user—exploration and development, processing, transportation, marketing and consumption. The information provides a basis for decisions to be taken within the Department and contributes to the development of resource policies. It carries out the administration of the Emergency Gold Mining Assistance Act under the direction of the Assistant Deputy Minister of Mineral Development; advises and participates in the programs of several other federal departments and task forces; represents the Department on several national and international committees, and co-ordinates the Department's foreign aid activities with the Canadian International Development Agency.

**Science and Technology.**—The Science and Technology Sector carries out a broad range of scientific research pertaining to the earth sciences—geodesy, geology, geophysics, mineralogy, metallurgy and geography. It is responsible for acquiring a knowledge of the physical characteristics of Canada's land masses, its energy and mineral resource potential, and the basic data essential for engineering and resource development purposes. Through its surveys, maps and reports, it furnishes the scientific data about the earth's crust necessary for the efficient development, use and conservation of the country's natural resources.

The Sector comprises, in addition to the Surveys and Mapping Branch whose functions are described at pp. 42-43, the Geological Survey of Canada, the Mines Branch, the Earth Physics Branch, the Polar Continental Shelf Project and the Resource Satellites and Remote Airborne Sensing Project.

The *Geological Survey of Canada* provides a systematic knowledge of the geology, mineral and fuel resources of the country and assists in the effective use and conservation of resources, and in the management and preservation of man's environment throughout Canada. Continuing research projects, especially those involving a major component of laboratory work, have given rise to the establishment of teams with unique capabilities in such areas as mass-spectroscopy and isotope dating, including: the development of instrumentation and continuing refinement of techniques in support of field research; geochemistry, especially projects in which new field techniques have been developed; biogeochemistry, involving geology, geochemistry and botany; clay mineralogy; and various

\* Prepared (August 1971) by the Public Relations and Information Services, Department of Energy, Mines and Resources, Ottawa.

*The Mines Branch of the Department of Energy, Mines and Resources, in this group of buildings, pursues its function as a major contributor to the national goal of ensuring effective use of mineral and energy resources. The complex is made up of mining research, fuels research and metal reduction and energy centres.*

*A combustion scientist measuring the reduction of air pollution emissions during research on improved heat and mineral processes being conducted in the fuels research centre.*

George Hunter

geophysical projects, especially in the development of remote sensing devices. Research tools and systems that have been developed include: high resolution aeromagnetic survey systems; ground gamma-ray spectrometry; development of airborne gamma-ray spectrometry for the search for radioactive minerals; practical methods of field geochemistry for prospecting; field methods for detection of Radon-222 in streams and sediments to outline uranium-bearing areas; and a method of tracing mineral trains in glacial deposits back to source as an aid to prospecting. In addition, the Geological Survey has led the world in rapid reconnaissance geological mapping using helicopters and other aircraft, especially in the field techniques developed and applied to the mapping of the arctic regions.

The *Mines Branch* is an interdisciplinary applied science institution engaged in research in non-renewable mineral resources and metals. Its facilities include a Mining Research Centre which carries out research, such as stability of underground and open-pit mines, methods of rock breakage, problems of environmental engineering and methods of obtaining maximum performance in mining operations. The Branch's general objective of its mission is to provide leadership in ensuring a sound scientific base for new technology and in stimulating the application of advanced technology to the extraction, processing and use of minerals and fuels in Canada and in the improvement of metal products. Specifically, it aims to improve the efficiency of the mining, processing and use of mineral resources and of metals and alloys; to improve the recovery of low-grade mineral resources and to minimize waste; to recognize problems in industry and undertake research, or give advice, on methods of solving these problems; to predict shortages and substitutions from technological market trends and to undertake research on mineral resources of potential value. It plans its activities in terms of its mission-oriented research, conducting basic research only when purely scientific data are required for technological purposes. As a corollary, the Branch has had to build up some facilities to support its specialized activities, such as facilities for the carbonization of coal, the study of corrosion, and for pilot-scale mineral processing and foundry investigations.

The *Earth Physics Branch* investigates the magnetic, gravity and seismic characteristics of the earth as a whole and of the Canadian land mass in particular. It utilizes the results of its research and of the research done elsewhere to obtain new and more detailed knowledge of the Canadian land mass, leading to improved magnetic and gravity charts, improved knowledge of earthquake hazards and improved detection of underground nuclear explosions. Some major programs are: studies on the properties and characteristics of the earth's crust and deep interior; study of the magnetic field in Canada and its variations, both to aid navigation and to investigate the ancient history of the earth; and study of variations in the gravitational field in Canada, relating this to the shape of the earth and to problems in accurate surveying. The Branch is concerned with the recovery of meteorites and investigation of meteorite craters. Branch scientists conducted the world's first systematic search for ancient meteorite craters using air photographs, maps and other information. Sixteen impact sites have been identified in Canada and a greater number of possible sites are under investigation. These investigations have been distinguished by the broad approach taken to the problems of crater identification and analysis; gravity, magnetic, seismic, resistivity, structural, topographic and petrographic methods have all been employed; even more important has been the pioneering use of continuous diamond drilling to investigate the deep zones of a number of craters.

The knowledge so gained has application to the nature, origin and abundance of meteorites and to the history of the more stable parts of the earth's crust. The analysis of field and laboratory observations, coupled with pertinent experiments, has led to a better understanding of the dynamic properties of the earth's crust and the nature of its response to high-energy shock pulses. These results have application to the field of rock mechanics and to the contemplated use of nuclear explosions for large excavations and are of significance to the mining and oil and gas industries because large impact structures have sometimes formed or controlled the distribution of deposits of economic importance.

The *Polar Continental Shelf Project* has been undertaken to increase the scientific and technical knowledge about the arctic regions of Canada. It provides the means for inte-

grating or co-ordinating arctic investigations and, by developing specialized knowledge and experience in technology, logistics, communication and human problems and making such facilities and knowledge available to responsible organizations, it promotes effective scientific and technical work in the arctic regions. The project works directly with other branches of the Department in planning and carrying out an integrated program of arctic research and survey; it conducts independent investigations to obtain information of basic importance about arctic phenomena, resources or conditions; and it co-operates with other government departments and agencies and with universities to provide expertise and facilities for arctic studies. Major programs, most of which are undertaken in co-operation with other departmental branches or agencies, include: aeromagnetic surveys of arctic regions and preparation of aeromagnetic maps; geodetic and topographic surveys of arctic regions to improve surveying techniques and knowledge of glaciology; investigation of marine geology of the arctic continental shelf and continental slope; investigation of terrestrial geology of arctic regions; hydrographic survey of the arctic continental shelf and slope; and oceanographic survey of arctic waters near the continent.

The *Resource Satellites and Remote Airborne Sensing Project* is a national research program, the co-ordination and funding of which is a responsibility of the Department of Energy, Mines and Resources. An Interdepartmental Committee, which was set up in 1969 and which includes representatives from all Federal Government agencies interested in the data to be produced by remote sensing, directs the development of Canada's program of remote sensing technology. Its functions are: to set up and monitor specialized technical working and planning groups with broad representation as appropriate for an on-going Canadian resource satellite and remote sensing program; to organize and cause to be organized, periodic national symposia related to this subject; to prepare program forecasts and estimates for such programs when developed; to plan and recommend an organization to carry out the Canadian resource satellite and remote airborne sensing program, and to perform necessary management functions until such time as a management agency is created.

#### Subsection 5.—Scientific Activities of the Department of Communications\*

The Communications Research Centre (CRC) of the Department of Communications, with a staff of about 500, carries out research and development in terrestrial and space communications systems, radio propagation, domestic and research satellites, electronics and space mechanics and information sciences related to communications systems. The main CRC site is at Shirley Bay, Ont., 15 miles west of the centre of Ottawa. CRC also operates a number of experimental sites, most of them in the Ottawa area and at remote northern locations, such as Resolute Bay. The Centre was a laboratory of the Defence Research Board specializing in defence telecommunications before the Department of Communications was formed in 1969.

The research program of CRC is organized into four main fields—communications research, information sciences, the radio environment, and spacecraft technology. The research resources are employed either in direct support of departmental programs, in support of other government agencies, or in the development of knowledge and national capabilities in communications processes and technology. Research is conducted on designated projects for other departments on a cost-recovery basis, including a continued program of research on behalf of the Defence Research Board. Close association with industry and with universities is developed through a wide variety of contractual arrangements and informal liaison.

Work in the field of communications system research constitutes a major element of the CRC research program in support of the Department's mission to foster, develop and introduce new communications systems, facilities and resources for Canada in the domestic and international spheres. In addition to internal research and development in this area, CRC provides both design authority and project management capability on related con-

\* Prepared by the Information Services Branch, Department of Communications, Ottawa.

tracts with industry. Having in mind the interests of isolated communities located in Canada's northern territories, satellite communications experiments have been defined to test and demonstrate the applications of a high-power satellite-borne transponder working into small low-cost earth terminals. In support of the Armed Forces in this field, investigations have continued into advanced terminal development in the land, air and sea environment and evaluation of system performance at very high latitudes. Radar research and development is directed to both long-term and short-term problems in the military and civil fields.

Within the radio environment, CRC is the Canadian national centre for research on radio propagation across the entire electromagnetic spectrum, including the laser region. The research program concentrates on propagation problems peculiar to Canadian latitudes with a view to applying the results to current and future communications systems. The experiments in the *Alouette/ISIS* satellites, in which the ionosphere is sounded from above and simultaneous measurements are made of closely related magnetospheric phenomena that influence the propagation of radio waves, are part of this program.

*ISIS-II*, the fourth Canadian-built satellite in the international co-operative *ISIS* program, was placed in orbit by a U.S. launch vehicle in the spring of 1971. This satellite was built by Canadian industry with CRC as the design authority, and joined *Alouette-I*, *Alouette-II*, and *ISIS-I* in orbit, each operating under world-wide control from the CRC at Shirley Bay. Together they constitute a continuing series of experiments in orbit for scientific studies in Japan, France, Australia, New Zealand and India, as well as the United Kingdom, the United States and Canada. CRC provides a radio prediction, forecasting and consulting service to Canadian users of radio communications systems.

The spacecraft development work at CRC is backed up by a program of related applied research in space mechanics and electronics, the objective of this supporting work being to provide advanced research, design and testing of complete spacecraft electronic and mechanical systems for these Canadian satellites. This includes theoretical studies of the physical properties of composite materials and the analysis of complex structures and components that comprise the mechanical systems and subsystems of a spacecraft. Research and development is also carried out on basic materials and processes and on spacecraft electronic systems which must be small, lightweight, and at least an order of magnitude more reliable than conventional electronics.

In co-operation with NASA, the Department of Communications is planning to build and launch a Communications Technology Satellite in 1974. The objective of the project is to space-qualify items of advanced design suitable for operating SHF transponders for communications spacecraft. Such designs may be incorporated into future spacecraft to provide domestic community broadcast television, FM broadcast, telephony and data relay transmission coverage in the 1980s, particularly to isolated areas of Canada.

#### **Subsection 6.—Scientific Activities of the Department of Industry, Trade and Commerce\***

The results of research, development and advanced technology are regarded by the Department of Industry, Trade and Commerce as a major resource essential to the achievement of efficient and sustained growth in the production and trade of Canadian goods and services. As tariff barriers are lowered and as natural resources become more easily replaceable and transportable, technological innovations will be a key factor in the economic growth of industrially advanced countries. Emphasis is thus placed on the level, distribution and quality of the national effort directed to the advancement and application of science and technology. A major function of the Department is to promote and assist product and process development and to increase productivity in Canadian industry through the greater use of research and the application of advanced technology. The Department achieves these objectives, mainly, through the use of financial assistance programs.

\* Prepared by the Office of Science and Technology, Department of Industry, Trade and Commerce, Ottawa.

The Industrial Research and Development Incentives Act (IRDIA) (RSC 1970, c. I-10) provides a general incentive for scientific research and development. Its objective is to induce Canadian corporations to undertake additional research and development likely to result in economic benefit to Canada through the eventual production of new and improved products and processes for sale in domestic and foreign markets. Any taxable Canadian corporation carrying on business in Canada may apply for a grant which is based on the corporation's expenditures for scientific research and development carried out in Canada. Since the inception of the Program in 1967, some \$75,000,000 have been authorized for payment to Canadian corporations in respect to scientific research and development activities conducted in Canada. Of this amount, \$30,100,000 were authorized for payment during the year ended Mar. 31, 1971.

Financial assistance for selected projects to develop new or improved products and processes which incorporate new technology and which offer good prospects for commercial exploitation in domestic and international markets is provided under the Program for the Advancement of Industrial Technology (PAIT). Applications for PAIT assistance are appraised as to the technical and commercial feasibility of the project, as to the capabilities of the company to carry it out, and as to the potential contribution to the economic growth of Canada. Projects supported under the program include the development of a water bomber aircraft, satellite communications equipment, electromagnetic prospecting equipment, flight and safety devices, advanced machinery and machine tools, wood-harvesting equipment, and data display devices. Since the inception of the program in 1965, over 400 projects involving a PAIT contribution of some \$95,000,000 have been supported.

In order to compete for and participate in the development and production programs of other NATO countries, Canada's defence industry must keep pace with product developments and advances in manufacturing technology dictated by the requirements of modern military equipment. The Defence Industry Productivity Program (DIP) is designed to enhance the technological competence of the Canadian defence industry in its export activities by providing financial assistance to industrial firms for selected projects. Emphasis is placed on those areas of defence technology having civil export sales potential. Assistance may cover the development of products for export purposes; the acquisition of modern machine tools and other advanced manufacturing equipment to meet exacting military standards; and assistance with pre-production expenses to establish manufacturing sources in Canada for export markets.

Projects initiated under the DIP Program have been instrumental in helping industry to develop its skills on a specialized basis in fields of technology that have defence and civil applications and which Canada is favourably situated to exploit. Costs of these projects are shared by the Department and the Canadian firm concerned and, in some instances, by the governments of other NATO countries. Among the projects that have received assistance are communications and aircraft navigation systems, gas turbine engines for aircraft, flight safety and simulation equipment, and information display facilities. Exports of the products of these developments continue to increase, including significant orders for such diverse applications as commercial airlines, public communication networks and television distribution systems. Since the inception of the Program in 1959, more than 480 projects involving a contribution of some \$270,000,000 have been supported.

The Department assists small firms in Canada to keep abreast of technological advances and to maintain a more competitive position in world markets through the establishment of three Programs. As a result of the financial assistance provided by the *Centres for Advanced Technology Program*, instituted in 1968, universities and other organizations are able to establish centres of expertise in fields where industry is unable to conduct the research necessary to develop new areas of technology, or where many industries seem likely to benefit from research into a common technological area. Three centres have been established—the Canadian Institute of Metalworking at McMaster University, the Centre for Powder Metallurgy at the Ontario Research Foundation and the System Building Centre at the University of Toronto. Through the *Industrial Research Institutes Program*, scientific services are available to industrial firms unable to maintain research

facilities and personnel of their own, thus helping to alleviate the shortage of scientific and technical resources that exists in Canadian industry, to foster a closer relationship between universities and improve their understanding of the problems of industry, and to help industry become acquainted with the latest pertinent scientific and technical developments. Institutes have been formed at the University of Windsor, McMaster University, the University of Waterloo, the Nova Scotia Technical College, McGill University, and L'École Polytechnique. Through membership in *Industrial Research Associations*, in which member companies may undertake on a co-operative basis research and development and related scientific activities such as technical information, technical consulting, analysis and testing, etc., small and medium-size companies acquire research and development and other scientific services which they are unable to afford on their own.

The Department is actively engaged in missions to foreign countries, resulting in Science and Technology Agreements and the establishment of Mixed Commissions for the purpose of stimulating exchange of technical information in areas of mutual interest, of encouraging joint research and development projects and promoting industrial development through licensing agreements in specific areas of technology. Agreements have been signed (by mid-1971) with Belgium, the Soviet Union, and the Federal Republic of Germany.

Co-ordination of policies relating to the Government's industrial assistance programs is achieved through the Interdepartmental Committee on Innovation. The Committee's terms of reference include a continuing review of program objectives and policies, studies of the environmental factors affecting the innovation process in Canada and comparison with other countries, studies concerning the relationship between investment in industrial research and development and economic growth, analysis and review of the Government's policies and programs with respect to procurement and the relation of the level of R&D activities in government establishments to that of financial assistance to R&D in industry.

### Subsection 7.—Scientific Activities of the Ministry of Transport\*

A research development unit has been formed recently within the Ministry of Transport. This Transportation Development Agency is one of the prime participants in scientific and industrial research in the field of transportation. Projects under way include:—

- (1) Mackenzie River Basin Study—to identify and evaluate transport requirements and costs of moving people and goods to, from and within the basin area over the next 15 years.
- (2) Capsule Pipeline Experimental Research—to develop capsule pipeline transport technology in Canada and evaluate its economic viability; this project is contracted to the Alberta Research Council.
- (3) Regina Telebus Demonstration—to test a demand-responsive transit system as an alternative to the automobile in low-density areas and the possible application of this technology to other Canadian cities; this project is undertaken in co-operation with local and provincial authorities.
- (4) Research and Development Survey of Canadian Manufacturing—to analyse a survey dealing with the scope and content of research and development in the Canadian transportation manufacturing industry.
- (5) Vacation Travel by Canadians Survey—to provide a description of holidays and vacation trips undertaken in 1970 and look further into vacation travel trends.
- (6) Sonic Boom Research—to evaluate, in co-operation with other federal departments and agencies, alternatives and formulate policy for the handling of supersonic aircraft movements in Canada.
- (7) Port Facilities and Services Pricing—to study the present pricing systems of port facilities and recommendations for revising the pricing structure.
- (8) Montreal Airport Study—to identify air traveller characteristics and mode choice on ground access to the Dorval Airport.
- (9) Slurry Pipeline Experimental Research—to obtain technical information on small-scale and full-scale solids pipelines for the materials most likely to be transported by this method in the future; this project is being conducted by the Saskatchewan Research Council in co-operation with the University of Saskatchewan.

---

\* Prepared by Information Services, Ministry of Transport, Ottawa.

The Saskatchewan Research Council is working on a slurry pipeline project for the federal Transportation Development Agency. Slurry pipelines are potentially an inexpensive method of moving large quantities of such materials as potash, iron concentrate, coal and sulphur long distances from their sources to ports and industrial centres. This gauge indicates the amount of pressure required at a certain point to counteract the pressure from the slurry.

#### Subsection 8.—Scientific Activities of the Atmospheric Environment Service, Department of the Environment\*

Meteorology, the science of the atmosphere, affects all parts of the economy and all areas of the country. It is basic to resource management in primary endeavours such as agriculture, forestry, mining, fishing, water and air (pollution), as well as to manufacturing, construction, transportation, power, etc., and the advancement of knowledge in this discipline, which ranges from the development of new techniques to improve routine weather forecasts to research of the upper atmosphere, is therefore of great value in almost every area of human activity. One of the characteristics of meteorological research and application is that the information and understanding obtained is seldom very far removed from having economic significance, often of great importance. Almost all research can be readily related to anticipated practical benefits.

Capital, operating and maintenance funds for research and development allotted to the Canadian Meteorological Service (re-named the Atmospheric Environment Service in 1971) for the year ended Mar. 31, 1970, amounted to \$3,000,000. In addition, assistance in the form of grants and contracts in the field of meteorology carried out by Canadian universities amounted to about \$350,000.

*Climatology Activities.*—The Atmospheric Environment Service conducts research on the applications of meteorology and climatology to water resources, agriculture, forestry, transportation, communications, industry, construction, air pollution control and aviation. In the field of hydrometeorology, which involves that portion of the hydrologic cycle which is affected by or which affects the atmosphere, the main processes of interest are precipitation, energy exchange and evaporation. Specialized studies are carried out on storms, the meteorology of lakes and rivers, and the energy balance and water balance of the natural

\* Prepared by the Atmospheric Environment Service, the organization and functions of which are described at pp. 49-53.

environment. Many of these are of a co-operative, inter-disciplinary and inter-agency nature, some in connection with international research programs and others in relation to food and water supply forecasting.

Climatic research and studies in support of natural resources, arctic exploration and development, industry and commerce are conducted within the Service itself, by the assignment of personnel to other agencies, through co-operative programs, or through contracts; bioclimatological research relating to productivity of forests is carried out co-operatively and in this field a newly designed lysimeter has been constructed for use in studies of evapo-transpiration from crops, the air-earth crop water balance and the evaluation of evaporation instruments; arctic studies are made in support of oil and mineral exploration, the selection of airport, town and mining sites, the design and operation of communication systems, transportation and operations in severe cold weather; topoclimatological studies, using mobile and stationary sensors, are a basis for optimum land use in fruit production and town planning; engineering studies are undertaken in support of the construction industry and analyses are used in the national building code; and an ice accretion climatology is being developed to aid in the design of support towers.

*Atmospheric Research.*—Progress continues in theoretical meteorology by using the basic dynamic and thermodynamic equations in conjunction with great computers. Topics studied include: energetics of atmospheric circulations; modes of development in extra-tropical and tropical cyclones; influence of moisture exchanges on the synoptic circulation; and new physical and mathematical models for studying and forecasting circulation patterns.

Studies of atmospheric processes on a scale from millimetres to about a mile (micro-meteorology) are of importance in such fields as air pollution, agriculture, forestry, urban planning, etc. Study topics include: wind and turbulence in the surface boundary layer; turbulent flux of heat, momentum and particulate matter; variability of momentum flux in the earth's boundary layer; effects of turbulence on coherent and incoherent light propagation in the atmosphere; and temperature and humidity microstructure at a land-lake interface. Major programs are carried out, with the emphasis on air pollution, by plume-rise and diffusion from point sources, the purpose of which is to obtain information concerning the meteorological parameters, on both the synoptic and meso-scales, that are conducive to high pollution potential, and to obtain data that could be incorporated into models for forecasting pollution potential on both a local and synoptic scale.

Studies of atmospheric motions ranging from about one mile horizontally up to about 100 miles (mesometeorology) are of great importance in local weather variability and are of basic importance for air pollution control, etc.

Studies on cloud and precipitation processes in the atmosphere may have very great economic consequences, partly because it may be feasible to modify and to a certain extent control these processes. Experimental seeding of selected hail-producing storms, at the peak of the hail season in Alberta, with airborne silver iodide flares produced encouraging results and local experiments on the dispersal of fog that seriously hampers transportation at airports and inland marine routes were conducted. Further study of previous rainfall modification experiments were re-analysed in attempts to assess the possibility of effective weather control which would be of tremendous economic benefit to forestry, agriculture, hydro-power and certain industries.

Field and laboratory studies continued on means of identifying, locating and tracking lightning-producing storms, the aim being to assist forestry interests to combat forest fires and to assist other agencies where precautionary measures would result in significant savings of life and money.

Work continued on increasing the effectiveness of radar to observe and differentiate storm details. Equipment and techniques were developed to calibrate, record and archive weather radar observations for effective use as a "radar raingauge".

The study of radiation, both solar and terrestrial, is of fundamental importance in respect to atmospheric energetics and information on radiation is of great value in many

human activities. Research programs include: basic properties of radiation instrumentation, their design and standardization by international intercomparisons; development and use of radiometersondes for measuring radiational variation with height; and use of radiation data for a number of applications including atmospheric dynamics, agriculture, construction, etc.

The atmosphere above 30 km. contains only 1 p.c. of the earth's atmosphere but the nature and extent of the interaction, both physical and dynamical, between this region and the underlying atmosphere require examination. The coupling mechanisms, through circulation and radiative processes, require study both from the viewpoint of downward energy propagation and climatic modification, and upward in relation to radio communication and flight through these regions. Studies include: the measurement of ozone in the atmosphere both from ground-base systems and by Nimbus 4 Ozone Experiment Data Evaluation. Nimbus 4 was successfully launched from Vandenberg Air Force Base on Apr. 18, 1970. The satellite has a near-circular orbit at 1,100 km. above the earth and is close to the local noon/local midnight meridian. By midnight (GMT) on Mar. 31, 1971, the satellite had completed 4,800 earth orbits. Backscattered ultraviolet instrumentation is used in the evaluation. High-level ozone profiles for the region above the main ozone maximum have been evaluated for over 30 orbits.

To establish high-level circulation patterns, radio-active tracers are used. Networks are being developed to observe and study noctilucent cloud and air-glow. Doppler radar techniques are used to measure upper winds in the 80-110 km. level range.

*Forecast Research.*—Research and development to improve and automate the operational weather forecasting system is being intensively pursued. Present computer methods are being extended, based on dynamic and occasionally quasi-empirical techniques. Research on other forecasting operations is also progressing, including systems for forecasting air pollution potential, ice in navigable waters, forest fire hazards, and wind-waves.

*Instrument Research and Development.*—The Atmospheric Environment Service uses an extensive variety of instruments to make observations on an operational basis at 240 Surface Synoptic Stations, 32 manned Aeronautical Stations, eight Automatic Reporting Stations, 36 Upper Air Stations and 2,180 Climatological Stations. In addition, the Service uses a number of instruments for carrying out specific research programs which may involve individual specialized instruments or minor instrumented networks that may be operated for a limited time only.

Considerable effort has gone into the improvement of instruments for measuring precipitation. An improved ordinary standard raingauge has been developed and introduced to replace the standard that was used for over 100 years. Development was completed on a unique new recording raingauge for measuring rainfall accurately. The principle of this raingauge is also being used in a heated liquid surface gauge which is being developed for the measurement of solid precipitation. Radar is used to detect the presence and location of water droplets and ice crystals over an area of 10,000 square miles and, in principle, a quantitative estimate of the precipitation falling over this area may be derived from a measurement of the intensity of the electromagnetic scattering from the precipitation particles. Auxiliary equipment is now under development which will process the output from weather radar sets to allow the precipitation over the 10,000-sq. mile area to be automatically evaluated and archived for climatological purposes. The equipment will also allow the precipitation patterns to be quantitatively assessed in real time by the use of a computer, so that the results may be immediately applied in flood control.

There is a requirement to introduce automation into meteorological observing. Automatic Weather Stations have been developed to operate at locations where power and teletype communication links are available. Research and development is also under way to develop an inexpensive and reliable station to operate at completely remote locations on land and sea. This latter development presents difficult technical problems as these stations must function under the extremes of Canadian climate and operate and communi-

cate on a minimum of power. One development of a second generation of stations is well under way which incorporates the latest solid state techniques and will be completely modular in order to minimize the "on site" maintenance. Prototypes are being tested in the Arctic.

Work on the improvement of instruments used at airports to provide direct, real time information on wind, altimeter setting, runway visual range, etc., is under way, urgently required because the great increase in the size of airports and the trend to all-weather operation which requires measurements at a sub-network of points on the airfield. The complexity of the problem is augmented by the multiplicity of readouts required for Air Traffic Control and other purposes; the only viable solution is to process and distribute the information by computers.

In the fields of hydrology, agriculture, forestry and atmospheric pollution, a number of automatic data-logging systems are being developed and a variety of specialized sensors and supporting equipment. Typical of this activity is the development of a large hybrid weighing lysimeter, the function of which is to provide a standard against which various evapo-transpiration measuring devices may be compared; it calls for a sensitivity of one pound in weighing a block of soil for a total weight of 130,000 pounds. Two designs of automatic recording evaporation pans are being developed to facilitate research into energy balances of such pans in which the lysimeter will be used as a reference.

Facilities for test and calibration of a wide variety of meteorological sensors, including temperature, humidity, pressure and precipitation sensors, are being constantly improved. The new service headquarters in Toronto, in use since mid-1971, contains an accurate humidity calibration chamber and a large low-speed wind tunnel which includes flow-conditioning equipment and is capable of being opened to the outside atmosphere.

## **Section 3.—Scientific Research Supported by Provincial Governments**

### **Subsection 1.—Provincial Organizations**

Six of Canada's provincial governments (Nova Scotia, New Brunswick, Quebec, Manitoba, Saskatchewan and Alberta) have established research councils or foundations and two others (Ontario and British Columbia) have assisted financially in the setting up of such organizations. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, mining, forestry and fisheries are outlined in the Chapters dealing with those subjects (see Index).

**Nova Scotia Research Foundation.**—This body was created by the Government of Nova Scotia in 1946 to provide industry and government with scientific and technical assistance in finding new and better ways to utilize the natural resources of the province and to assist the process industries. To this end, it seeks to correlate and further scientific and technical work on local problems and available resources. A new \$1,500,000 laboratory building, financed by an Atlantic Development Board grant and occupying a 10-acre site in Dartmouth, was occupied in 1969. Equipment was provided through a grant of \$500,000 from the federal Department of Regional Economic Expansion. The present staff of 71 includes 48 scientists and technicians. It is governed by a board made up of scientists and industrialists.

The Foundation is made up of seven Divisions. The Geophysics Division carries out gravity, seismic, magnetic, well-logging and electromagnetic surveys for industry and for

government, and also sponsors a program of research on the surficial geology of Nova Scotia. The Chemistry Division carries out water, mineral and foliar analysis as well as pilot plant studies on chemical processes. One of its main tasks is to develop new commercial processes and products which utilize the existing minerals and other natural resources of the province. The Operational Research Division provides a service for industry and government by utilizing the mathematical techniques of systems analysis. The Division also undertakes projects in the area of optimal resource allocation, production scheduling and distribution. The Engineering Physics Division makes available developments in applied physics to Nova Scotia industry. Emphasis is at present placed on research and development in electronic and mechanical engineering and in non-destructive testing. The Technical Services Division provides technical information on materials, equipment and processes and gives industrial engineering assistance to manufacturing industries. The various sections include technical information, industrial engineering, an information centre and an extensive aerial photo library. The Applied Biology Division has been carrying out field and laboratory studies on the ecology, distribution, growth, harvesting techniques, conservation and cultivation of commercial algae in the Atlantic area. The Library is well stocked with scientific and technical information to aid the Research Foundation staff, industry and government.

A *Research Foundation Bulletin*, issued occasionally, keeps industry advised of Foundation activities and of important discoveries in science and technology. The *Research Record* gives a descriptive account of past research projects.

**New Brunswick Research and Productivity Council.**—The Council is a body corporate set up in 1962 by an Act of the Government of New Brunswick. It is governed by an independent group of prominent citizens from management, labour, the professions, etc., which meets four times a year. Members are appointed for three-year terms by the Lieutenant-Governor in Council, one as chairman who reports to the Premier annually. The greater part of the capital investment was provided by the Government of Canada but the province makes an annual operating grant from its Consolidated Revenue Fund. Additional funds are derived from cost-recovery fees, services under contract, sponsorship, etc. The Executive Director has charge of all matters relating to the administration of the Council affairs and has supervision over and direction of the work of the staff.

The Council maintains a well-equipped centre for engineering and problem-solving, industrial research and development and, in addition to its provincially oriented projects, conducts research on a cost-recovery basis for clients in other areas of Canada and in other countries.

**Quebec Industrial Research Institute.**—The Quebec Industrial Research Institute was set up under the terms of an Act of the National Assembly (SQ 1969, c. 62), given Royal Assent on Dec. 12, 1969. The Institute is made up of 15 members named by the provincial government after consultation with the most representative scientific and industrial organizations of the province. Its functions are: (1) research in applied science carried out either in its own laboratories or in those of other research institutes; (2) development of products, processes and apparatus of an industrial or scientific nature; and (3) collection and dissemination of technological and industrial information. The Institute, which is an independent organization, will be financed for the five years 1970-74 by provincial grants of \$4,000,000 a year. Headquarters are located at Ste-Foy, Quebec (10).

**Ontario Research Foundation.**—The Ontario Research Foundation, established in 1928, is an independent corporation. It derives its powers from a special Act of the Ontario Legislature and is responsible to a Board of Governors consisting of leading members of the industrial, commercial and scientific communities who are appointed by the Lieutenant-Governor in Council. The organization was financed initially by an endowment fund, provided by industrial and commercial corporations through the Canadian Manufacturers' Association, and an equal block grant from the provincial government. Most of

its current income is derived from contract research undertaken mainly for industry. In recent years the Ontario Government has provided a direct annual grant to ORF, the amount of which is directly proportional to ORF's income from industry.

The Foundation is concerned primarily with the development of Canadian industry through the application of science and technology. Also, through the various departments of the Ontario Government, it undertakes work relative to the natural resources of the province. Foundation activities are not restricted to the province; work is undertaken for any organization in Canada on the same basis.

The Foundation contributes to the industrial economy and to the general welfare by: (1) undertaking industrial research and development for companies as requested; (2) undertaking research and development for governmental agencies as requested, particularly with respect to natural resources and to defence; (3) providing and maintaining an effective and efficient applied research and development facility for the use of industry and government agencies, using funds provided by the Ontario Government to support the back-up research necessary for this purpose; and (4) bringing to the attention of industry and governmental agencies research opportunities that promise economic or social benefits.

Situated in the Sheridan Park Research Community, 17 miles west of Toronto, and serving as the nucleus of that scientific centre, ORF provides the most modern facilities and equipment for scientific and technological investigations. Its staff of approximately 275 scientists, engineers, technicians and service personnel has diversified academic training and industrial experience and is so organized that these specialized talents can be applied to individual research and development projects. In effect, the staff of ORF constitutes a reservoir of scientific and technical abilities from which industrial or governmental sponsors can draw at will.

Since its establishment, ORF has provided numerous companies—from the very small to the very large—with research and development services. These have ranged from short-term investigations and feasibility studies, through product and process development, to long-range fundamental scientific investigations. All research and development projects are conducted on a confidential basis—this includes all business, technical or proprietary information revealed to ORF by clients or prospective clients. Patents resulting from research and development studies are assigned to the client.

**Manitoba Research Council.**—The Manitoba Research Council consists of seven members and 12 advisory members representing natural-resource-based industry, manufacturing, labour, the universities and government. Permanent staff members are provided by the provincial government. Its work is financed by provincial government appropriations, although fees and service charges may be levied for its services. The objectives of the Council are to promote or carry out, or cause to be promoted or carried out, research and development investigations related to the natural resources and industrial operations of the province. At present, research sponsored by the Council is performed in the existing research laboratories of the province. Much of the research is aimed at establishing Manitoba as a centre of excellence in food products, electronics, materials research and building systems. In addition, through a technical information service, industries are encouraged to incorporate in their operations new technological developments. The main reason for the establishment of the Council is to assist Manitoba industry to improve its market position by developing a more scientifically based production capability. The Council maintains an office in the Provincial Government Administration Building (Norquay Building) in Winnipeg.

**Saskatchewan Research Council.**—This Council was set up in 1947 under an Act of the Government of Saskatchewan. The Council carries out research in the physical sciences with the aim of improving the provincial economy. It is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. At first the Council had no scientific personnel and laboratory facilities

of its own. Its research program was carried on at the University of Saskatchewan and was promoted by means of grants to members of the staff and scholarships to graduate students. The 1947 Act was amended in 1954 to empower the Council to acquire property, employ staff and conduct its own financial affairs. Laboratory buildings were erected on the university campus in 1957 and were extended in 1963. In the present program of research the emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, technical assistance to industry and transportation of solids in slurry form by pipeline. A large part of the program is carried out by the permanent staff, numbering about 60, but some of the Council's research is still promoted by grants to university staff. The members of the controlling body, the Council proper, are appointed by the Lieutenant-Governor in Council and consist of representatives of the Saskatchewan Government, the university and industry.

**Research Council of Alberta.**—The Province of Alberta set up a scientific and industrial Research Council in co-operation with the University of Alberta in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The present program is directed mainly toward the development of the natural resources of the province and toward the establishment of new industries within the province. The principal areas of activity are fossil fuels development and utilization, geological surveys and research, groundwater, soils, industrial minerals, chemical product and process development, microbiology, technical assistance to industry, gasoline and oil testing, pipeline transportation, highway research, river engineering, environmental studies and hail research.

The operations of the organization are controlled by a Council of 10 individuals representative of the Alberta Government, the universities and industry. The various research fields are reviewed by advisory committees of specialists drawn from industry, the universities and the provincial government. The programs of the Research Council of Alberta are financed principally by provincial government appropriations, although an increasing amount of income is derived from contract research.

The main Council laboratories and offices are located on the University of Alberta campus in Edmonton. A pilot plant and laboratory facility is located in the Clover Bar area east of the city. The full-time staff comprises approximately 200 scientists, engineers, technologists and supporting personnel.

**B.C. Research.**—B.C. Research is the technical operation of a non-profit, industrial research society—the British Columbia Research Council—with offices and laboratories at 3650 Westbrook Crescent, Vancouver 8, B.C. Its function is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific knowledge. B.C. Research carries out contract research for clients on a confidential basis, initiates “in-house” research programs designed to promote and utilize the resources of the province, and provides a free technical information service in collaboration with the National Research Council. B.C. Research is active in the areas of applied biology, chemistry, engineering, physics, operations research, industrial engineering, industrial market studies and economic feasibility studies.

## **Subsection 2.—Expenditures of Provincial Organizations on Scientific Activities**

As stated in Subsection 1, eight provinces have established research councils or foundations, each having the primary role of assisting firms with technical problems and of aiding with the development of provincial natural resources. Table 4 shows the approximate expenditures of these establishments as reported in the latest Statistics Canada biennial survey of expenditures on industrial research and development in Canada. There seem to be two main differences between the pattern shown for these provincial establishments and

that shown for industrial research and development expenditures as a whole—the first is that wages and salaries seem to account for a larger portion of current intramural costs and the second is the relative unimportance of extramural payments.

#### 4.—Expenditures on Research and Development by Provincial Research Councils and Foundations, 1965-70

Type	1965	1966	1967	1968	1969	1970 <sup>1</sup>

<sup>1</sup> Forecast by respondents.

As shown in Table 5, provincial governments are by far the most important source of funds, although some councils or foundations rely on them more than others. The contribution of the Federal Government was the second largest source of revenue in 1969 and payments for research and development contracts from Canadian industry provided most of the remaining funds. Table 6 shows that total personnel employed by these establishments increased 21 p.c. from 1965 to 1969.

### Section 4.—University Research\*

The traditional role of universities, which is to generate, organize and transmit knowledge, makes essential their involvement in the performance of research. The kind of research they conduct is conditioned to a large extent by their special needs and responsibilities. Because it is important that faculty members remain at the forefront of knowledge in their discipline and at the same time retain the breadth required to organize and transmit new knowledge effectively, they have traditionally favoured basic research as the vehicle for the achievement of these objectives. The result has been that universities have become the principal performers of basic research in Canada. It is estimated that 70 p.c. of all research performed in the universities is in the category of basic research and this relatively high proportion is to some extent a reflection of the mechanisms by which Canadian university research is funded.

University research in Canada is funded from a multitude of sources. A large part of the total cost is covered from funds not specifically assigned to research activities. The proportion of such funding that should be attributed to research is often a matter of opinion, particularly as regards the apportioning of academic salaries between teaching and research, the division between research and graduate instruction, the cost of accommodation and maintenance, etc. A special study conducted for the Science Council of Canada and the Canada Council† indicated that in 1966-67 the total cost of research in Canadian universities was of the order of one half of the total ordinary university expenditure. This type of in-depth analysis has not yet been repeated, but no major change of this percentage is anticipated. Most of this cost is borne by the provincial and federal governments in accordance with their constitutional responsibilities—the provincial jurisdiction over education and the federal responsibility for research.

The main elements in the cost of research are: (1) assisted research funds—grants and contracts to institutions or members of the staff; (2) awards—research fellowships and scholarships; (3) pro-rated value of faculty time devoted to research; and (4) other indirect costs—pro-rated costs of libraries, administration, maintenance, publications, etc. The appropriate part of the capital cost of buildings and facilities is often included in operating expenditures, e.g., when financed from grants for assisted research. Most of the research equipment is provided through such grants. The last two elements in the list are not normally broken out in university accounts, as stated before. These indirect costs are covered primarily from general funding of university education by the provincial governments. However, in accordance with the Federal-Provincial Fiscal Arrangements Act, 1967, the Federal Government reimburses the provinces for at least 50 p.c. of the operating costs of all post-secondary education. It follows that one half of the above indirect cost of research is, in the end, covered by federal funding.

The assisted research funds represent the direct costs of research. They include all funds channelled through universities, even though most of them are assigned to individual researchers. These funds cannot be used to provide or supplement the salaries of the staff. They pay for equipment, materials, travel and research assistance, including student assistance. The scholarships and fellowships have a converse objective; they provide or complement the personal income of the staff on sabbatical leave and of graduate students or post-doctorate fellows to permit them to devote their time to research. Some of these are tenable abroad and some are reserved for foreign students in Canada as a part of foreign aid.

Most of the assisted research funding is granted for specified purposes—mainly in response to proposals coming from the universities. These grants thus have the most direct influence on both the magnitude and the nature of university research. They can

\* Revised by J. Miedzinski of the Science Council of Canada staff.

† Macdonald, J. B., et al., "The Role of the Federal Government in Support of Research in Canadian Universities", Queen's Printer, Ottawa, 1969, pp. 37 & 50. This study used some advanced information from "An Explanatory Cost Analysis of Some Canadian Universities", Association of Universities and Colleges of Canada, Ottawa, 1970.

be used therefore as a gauge of research activities in Canadian universities. During the past decade, the assisted research funds gradually rose from \$26,500,000, representing 12.5 p.c. of the total operating expenditure in 1961-62 to \$125,000,000 or 14.1 p.c. in 1968-69. This means that the assisted research funds represented nearly 30 p.c. of the total cost of university research in the latter part of the decade.

The assisted research funds come from several sources. The major sources in 1968-69 were:

<i>Source</i>	<i>Assisted Funds</i>	<i>P.C. of Total Funds</i>
	\$'000,000	
Federal Government.....	86.3	69.1
Provincial governments.....	17.3	13.8
Business enterprise (estimate).....	3.4	2.7
Foundations (estimate).....	9.9	7.9
Others (estimate).....	8.1	6.5
ALL SOURCES.....	125.0	100.0

The above distribution has shown only a slow variation over the past few years. It indicates the predominant influence of federal financing on university research in Canada; this would still be true if direct awards to individuals (research scholarships and fellowships) were included in the above figures. The assisted research funds include the support of social sciences and humanities but that part represents only a small percentage of the total shown here, particularly since most of such support is in the form of direct awards, by-passing university accounts.

The federal support of research in universities consists of three main components coming from two types of sources. The main elements are the grants and contracts program, the awards (scholarship and fellowship) program and the support of related scientific activities—research publications, acquisition of research collections and symposia. The sources are: (1) the granting councils—the National Research Council (NRC) and the Medical Research Council (MRC),\* and (2) the mission-oriented government departments or agencies. The total support coming from these sources in recent years is shown in Table 7, which includes the support of non-profit organizations and covers development as well as research. The development component is small and the line between research and development is difficult to draw in many fields, such as health sciences. The non-profit institutions for the most part consist of hospitals and research institutes where research is carried out mainly by academics. On the other hand, scholarships supporting primarily education rather than research, fellowships tenable abroad, and support of some related activities are excluded.

The table shows the extremely important role played by the NRC and the MRC in the support of university research, since about 70 p.c. of the federal funding comes from these two Councils. The National Research Council has the responsibility for supporting research in the natural sciences and in engineering; it is the largest sponsor of research in Canada. The Medical Research Council, under its new Act passed in 1969, assumes the responsibility for research support in all the disciplines in the health sciences; this represents an extension of its former terms of reference which encompassed only medical research.

The purpose of the support of research by the Councils is the healthy and balanced development of knowledge in Canadian universities rather than the support of a particular mission of their own. They award grants mainly or largely in response to initiatives from the universities and their criteria for support are based mainly on the merits of the individual researcher and the excellence of the project. The direct utility of the knowledge sought is generally not given high priority in assessing a project. These funding policies have favoured the development of basic research of a high calibre in Canadian universities.

\* See pp. 296-299.

The MRC has the greater tendency toward preferential funding of research in certain areas which are indicated by their studies as needing more effort; approximately 50 p.c. of its funding is set aside for this purpose. The NRC exerts influence to a similar purpose through "negotiated development grants" which amount to about 10 p.c. of the total funding and by indicating to prospective grantees the areas in which more proposals would be desirable.

The total granting budgets of the two Councils are significantly larger than the amounts entered in Table 7; the totals are shown in Table 8, with a breakdown intended to match as closely as possible the elements in the costs of research listed on p. 474. The main reason for the difference between the two tables lies in the degree to which indirect support of research is included in the statistics. The most important feature of Table 8 is the sharp change shown in the rate of growth of funding by the two Councils, from a rapid growth in the 1960s to marginal increases in the 1970s. There is no corresponding change in the growth of the number of university staff and students shown in Table 9.

<sup>1</sup> Estimates.

The almost explosive growth that occurred in university research during most of the 1960s appears to be moderating as the 1970s begin. Some noticeable trends have occurred in recent years in Canadian university research that may be expected to continue and perhaps to accentuate in the years immediately ahead. Foremost among these is the move to break down the rigid barriers that have existed between disciplines on university campuses. With increasing frequency, projects are being undertaken and research institutes established that depend on the co-operative initiative of two or more departments, faculties or even universities. Noteworthy also is the relatively recent trend toward a greater degree of specialization on the part of universities. Special grants (Negotiated Development Grants), made available by the NRC and by the MRC, give positive inducement to universities to follow this policy of specialization. Recent recommendations by the Science Council have advocated more support for university research from the mission-oriented departments, with the NRC and the MRC (together with the Canada Council) assuming more of a balancing role and ensuring that no legitimate discipline is neglected. These Councils have established a co-ordinating committee to ensure that no gaps exist in their joint coverage. Furthermore, the problems of rationalization of university research, establishment of criteria for selection of projects and for distribution of support among disciplines or problem-oriented work are under active public discussion and are the subject of a number of special studies, which may lead to a considerable evolution of university research in Canada during the 1970s.

## Section 5.—Industrial Research

### Subsection 1.—Industrial Research and Development Activities

After a period of substantial growth, expenditures on industrial research and development by Canadian firms, particularly those associated with fabrication and end-product manufacture, are beginning to level off. The creation and expansion of industrial research and development units to meet competition from other Canadian and foreign firms and to exploit efficiently the country's natural resources, has occurred. In the early 1960s, capital and operating expenditures for industrial research and development (R&D), encouraged by the growth in markets, production facilities, financial resources and supplies of technically skilled manpower, increased rapidly as shown in the chart on p. 438. Toward the end of the decade, total expenditures tended to remain almost constant, accompanied by a lack of growth in the professional and supporting personnel. This was partly a consequence of several laboratories closing or reducing their size and no new laboratories being established.

The Federal Government recognizes the need for a strong research and development effort in Canada and has inaugurated several programs of direct assistance. The Department of Industry, Trade and Commerce administers the Defence Industry Productivity Program and the Programme for the Advancement of Industrial Technology. The National Research Council and the Defence Research Board make grants in support of industrial research projects. In addition, the Industrial Research and Development Incentives Act (IRDIA) authorizes the Department of Industry, Trade and Commerce to make substantial grants to firms expanding their research and development programs (see p. 464).

The Programme for the Advancement of Industrial Technology, which was established in 1965 as the civil counterpart of the Defence Industry Productivity Program, is of particular interest because of its innovative slant and selective nature. Its basic aim is to help Canadian secondary industry upgrade its technology and expand its innovative activity by underwriting the technical and market risks of specific product or process development projects which involve a significant advance in technology. The program was amended in 1971 by the Department of Industry, Trade and Commerce with assistance extended to operations and market research, systems and application studies, and similar activities. These must serve to define, in the light of market requirements, the specifications for a product or process to be developed, or to assess the market potential and commercial feasibility of the project. Priority goes to projects that increase productivity or otherwise contribute directly to attain a unique capability or technical leadership, taking advantage, where possible, of Canada's natural resources and skills.

In recent years the total direct federal support for industrial research and development (incentive schemes and contracts) has been as follows:—

<u>Year</u>	<u>Amount</u>
	\$'000,000
1965-66.....	75.5
1966-67.....	83.7
1967-68.....	84.4
1968-69.....	109.0
1969-70.....	109.8
1970-71 (projected).....	135.6
1971-72 (estimated).....	140.1

**Employment Related to Research and Development Activities.**—The level of employment of scientists and engineers in the various areas of industrial research and development gives a measure of the corresponding activity. The first 10 industries rank as follows (1969):—

<u>Rank</u>	<u>Industry</u>	<u>Scientists and Engineers in R&amp;D</u>	<u>Percentage of Total</u>
		No.	
1	Electrical products.....	2,104	28
2	Other chemical products.....	926	12
3	Aircraft and parts.....	656	9
4	Primary metals (non-ferrous).....	462	6
5	Paper.....	451	6
6	Drugs and medicines.....	378	5
7	Scientific and professional instruments.....	330	4
8	Machinery.....	306	4
9	Petroleum products.....	304	4
10	Food and beverages.....	219	3
	Other industries.....	1,345	19
	ALL INDUSTRIES.....	7,481	100

The above 10 industries absorb some 81 p.c. of the scientists and engineers employed in research and development. The first three industries alone employ about 50 p.c. of

*A machine developed by the Cominco Product Research Centre at Sheridan Park, Ont., to cast continuously thin lead sheet has significantly reduced costs and made its use an economic reality. Thin lead sheet has proved a highly effective sound and moisture barrier and its acceptance by the construction industry is widening rapidly.*

R&D personnel in Canada, and account for over 50 p.c. of all current intramural expenditures on R&D. About 26 p.c. of the scientists and engineers in industry have advanced degrees equally divided between master of science and doctorate degrees at about 13 p.c. each.

One possible method of identifying research-intensive industries is to compare the number of scientists and engineers involved in R&D with the total number of persons employed by the industry. Based on this criterion, the 10 leading industries are as follows (1969):—

<i>Rank</i>	<i>Industry</i>	<i>R&amp;D Scientists and Engineers per 1,000 Employees</i>
1	Drugs and medicines.....	42
2	Scientific and professional instruments.....	33
3	Aircraft and parts.....	26
4	Electrical products.....	21
5	Gas and oil wells.....	16
6	Other non-manufacturing.....	16
7	Other chemical products.....	15
8	Rubber.....	11
9	Petroleum products.....	8
10	Machinery.....	7

For all industries reporting, there were seven scientists and engineers per 1,000 employees. The above industries accounted for sales of some \$31,000,000,000 in 1969.

### Subsection 2.—Industrial Research and Development Expenditures

The latest biennial Statistics Canada survey of expenditures on research and development in Canadian industry was carried out in 1970, securing data for the year 1969. Results of that survey appear in Statistics Canada publication *Industrial Research and Development Expenditures in Canada, 1969* (Catalogue No. 13-203); they are summarized in this Subsection.

In the latest survey, 1,010 firms reported expenditures on R&D for 1969. The total amount expended (current and capital) reached \$431,300,000, an increase of about 13 p.c. over 1968. Current intramural expenditures, reported by 899 firms, amounted to \$340,700,000, an increase of 12 p.c. over 1968. However, it should be noted that, in the past few years, current intramural expenditures have tended to grow at a less rapid rate than in the early 1960s and that a decrease was forecast for 1970. This decline might be related to the general economic conditions prevalent at the time of the survey. The size of extramural research and development payments made abroad by Canadian firms did not increase very much since the previous survey but in 1969 companies reported spending abroad about twice as much as they received for research purposes from other countries.

#### 10.—Total Industrial Research and Development Expenditures, 1966-70

Item	1966	1967	1968	1969	1970 <sup>1</sup>

<b>Totals, All Expenditures.....</b>	<b>347.6</b>	<b>372.1</b>	<b>380.9</b>	<b>431.3</b>	<b>438.5</b>

<sup>1</sup> Forecast by respondents.

<sup>2</sup> Adjusted by Statistics Canada to remove those payments made by one Canadian firm to another, since such payments are covered in the intramural costs.

<sup>3</sup> Statistics Canada estimate.

Table 11 shows the current intramural research and development expenditures by performing industries. In 1969, three industries—electrical products, aircraft and chemical products—accounted for about 55 p.c. of the total expenditures and an estimated 52 p.c. in 1970. Since 1955, the year of the first survey, these industries have spent more for current intramural research and development than all others combined.

**11.—Current Intramural Research and Development Expenditures, by Industry, 1966-70**

Industry	1966	1967	1968	1969	1970 <sup>1</sup>

<sup>1</sup> Forecast by respondents.

Because of difficulties of interpretation and estimation, the figures shown in Table 12 cannot be more than approximations. However, they do indicate that the research and development performed within an industrial group may be for the benefit of some other related industry or for a new 'industry'. Furthermore, company groups may have been assigned to one industry, whereas the activities of the group, including research and development, may actually cover several industries. For example, research and development for the aircraft industry was largely for other products—about \$41,757,000 was spent on aircraft and \$2,899,000 on other transportation equipment.

**12.—Current Intramural Research and Development Expenditures, by Product Group, 1969**

Product Group	Amount	P.C. of Total	Product Group	Amount	P.C. of Total

			<b>Totals, All Groups.....</b>	<b>340.7</b>	<b>100.0</b>

Table 13 gives sources of funds for total current and capital research and development expenditures. For all Canadian industry, the performing company is by far the most important source of funds, providing over 75 p.c. of such funds in 1969. However, since capital expenditures are not usually financed by governments or other companies supporting a firm's research and development program, the performing company would be a less dominant source of funds for current intramural expenditures—perhaps accounting for about 70 p.c. rather than 75 p.c. Other significant sources are the Federal Government, foreign governments and foreign related companies. Industries and firms do not rely on the same sources to the same extent. For example, about 62 p.c. of the research and development funds for the scientific and professional instruments industry seems to come from outside the performing company; the direct support of the Federal Government goes mainly to two industries—aircraft (42 p.c.) and scientific and professional instruments (28 p.c.); funds from foreign sources account for about 32 p.c. of intramural expenditures of the latter industry.

13.—Sources of Funds for Intramural Research and Development, by Industry, 1969<sup>1</sup>

<sup>1</sup> Includes capital expenditures.

<sup>2</sup> Includes the membership fees of research institutes and payments for research and development performed under contract for non-related companies.

<sup>3</sup> Includes foreign governments.

## Section 6.—International Comparisons

A comparison of gross domestic research and development (R&D) expenditures in Organization for Economic Co-operation and Development (OECD) countries is given in Table 14. Within this group of countries there are wide differences in total resources, in

population, in defence commitments, and in industrial, commercial, social and political structure. Comparisons are therefore difficult. Moreover, the criteria used to obtain these statistics may vary from country to country.

#### 14.—Gross Domestic R&D Expenditures in OECD Countries and Current Expenditures, by Type of Activity, 1967

Country	Gross Domestic R&D Expenditures	Comparison with United States \$1,000 <sup>1</sup>	Current Intramural Expenditures by Type of Activity

### Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec, its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories, the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however

\* Except as otherwise credited, this Chapter has been revised in the Judicial Division, Statistics Canada.

† Revised by the Criminal Law Section, Department of Justice, Ottawa.

(Sect. 101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes, particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciary are given in Chapter II, pp. 108-110 and of the provincial and territorial judiciaries in the 1970-71 Year Book at pp. 99-106.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts, some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbridge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."\* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (RSC 1970, c. C-34) came into effect on Apr. 1, 1955. Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of by a single judge; amendments effected in 1959, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating

\* Salmond on *Jurisprudence*, 7th Edition, p. 496.

to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (RSC 1970, c. P-2), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 507-509).

It is most important to note that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:—

“1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,

- (a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
- (b) the right of the individual to equality before the law and the protection of the law;
- (c) freedom of religion;
- (d) freedom of speech;
- (e) freedom of assembly and association; and
- (f) freedom of the press.”

Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961, the offence of murder was divided into capital and non-capital, the death penalty was abolished in relation to the offence of non-capital murder, and the term *criminal sexual psychopath* was dropped and the term *dangerous sexual offender* substituted; in 1965, provision was made for the right to appeal in *habeas corpus* proceedings.

The concept of “non-capital murder” was introduced into Canadian criminal law in 1961. At that time, capital murder was defined to include, for example, planned and deliberate murder, murder in the course of certain violent acts and murder of peace officers and prison officers. Life imprisonment was substituted for the death penalty in cases where the accused was convicted of non-capital murder. In 1966, the House of Commons, on a free vote, rejected a Bill under which the death penalty for murder would have been completely abolished but in 1967 an Act was passed under which the definition of capital murder is restricted to the murder of peace officers or prison officers. This Act was brought into force on Dec. 29, 1967, and will continue in force for a period of five years from that day. The Act will then expire unless before the end of the five-year period Parliament by a joint resolution of both Houses directs that it shall continue in force. If the Act is not continued in force before the expiry of the five-year period, the broader definition of capital murder introduced in 1961 will again come into operation. It should be noted that the law contains a provision whereby a person in respect of whom sentence of death has been commuted or a person who has been sentenced to life imprisonment for capital murder shall not be released without the prior approval of the Governor in Council.

The most comprehensive amendments to the Criminal Code since it came into force on Apr. 1, 1955 are contained in the Criminal Law Amendment Act which was assented to on June 27, 1969 and, with certain exceptions, came into force on Aug. 26, 1969. Among the changes are amendments relating to gaming and lotteries, “drinking and driving”, homosexual acts and therapeutic abortion.

The provisions with respect to lotteries, which came into force on Jan. 1, 1970, make it lawful for the Federal Government to conduct a lottery and for a provincial government to pass legislation enabling it to conduct a lottery either alone or in conjunction with one or more other provincial governments. Provincial authorities may issue licences under which charitable and religious organizations may be authorized to conduct lotteries and games and under which agricultural fairs and exhibitions are no longer restricted to lotteries and games conducted on the exhibition grounds.

Under the amendment, a person is guilty of an offence if he drives a motor vehicle while the proportion of alcohol in his blood exceeds 80 milligrammes of alcohol in 100 millilitres of blood. It is compulsory for a driver to take a blood test when required to do so by a peace officer who has reasonable and probable grounds to believe that the person's ability to drive is impaired and it is an offence for a person to fail or refuse without reasonable excuse to take a blood test when so required. Where such blood test is taken within two hours of the alleged offence and the various conditions set out in the legislation relating to the taking of the test are complied with, the result of the test is *prima facie* evidence of the proportion of alcohol in the driver's blood. This amendment came into force on Dec. 1, 1969, with the exception of those provisions dealing with the alcohol breathalyzer legislation which refer to the specimen of breath to be given to the accused in an approved container for his use at the time the breath sample is taken. The proclamation of these provisions awaits the development of a suitable container.

The amendment contains provisions whereby therapeutic abortion is not unlawful where the operation is carried out after the therapeutic abortion committee of an accredited hospital has certified that the continuation of the pregnancy would or would be likely to endanger the life or health of the female. The operation may be performed only by a duly qualified medical practitioner and only in an accredited hospital or a hospital approved for the purpose by the Minister of Health of a province, who is also entitled to information relating to the issue of a certificate and to the operation.

The amendment removes from the ambit of the criminal law homosexual acts committed in private between two consenting adults.

As noted earlier in this Section, an amendment was made to the Criminal Code in 1959 restricting the publication of an admission or confession at a preliminary inquiry. Under the new amendment, provision is made whereby, on the application of the accused, the magistrate or justice holding a preliminary inquiry may make an order forbidding publication of *any* of the evidence until the accused has been discharged or, if he has been committed for trial, the trial has ended. Apart from such an order, the prohibition against publishing an admission or confession remains.

Previously, where there was reason to believe that the accused person was unfit on account of insanity to stand trial, the issue of his fitness to stand trial was decided as soon as it arose. If the court decided that the accused was not fit to stand trial, he was detained in custody at the pleasure of the Lieutenant-Governor. As the merits of the case against him were not tried, it was possible for an innocent person to be so detained. Under the amendments, the court has the power to postpone dealing with the issue of fitness to stand trial until after the prosecutor has presented his evidence. If the prosecutor's evidence is not sufficiently strong to make out a case, the accused may be acquitted and set free. If he requires treatment for a mental condition, he may be dealt with under the applicable provincial mental health legislation instead of under the Criminal Code. In addition, in order to safeguard the rights of those persons who are found unfit to stand trial and therefore detained in custody, the Lieutenant-Governor of the province is authorized to appoint a board to review at least every six months the case of every person so detained, also to review at least every six months the case of every person who is held in custody in the province following an acquittal on account of insanity at the time the offence was committed.

In regard to sentence, the amendment contains provisions enabling courts to make more liberal use of suspended sentences, with or without probation. The amendments remove the previous restriction which prevented the court from suspending the passing of sentence when the offender had more than one previous conviction; enable probation orders to be transferred from one province to another; enable the court to make a probation order in addition to a sentence of imprisonment not exceeding two years; and make it a substantive offence, punishable on summary conviction, for a person on probation wilfully to refuse to comply with the probation order.

In 1971, Parliament passed the Bail Reform Act. When proclaimed in force, this Act will change the Criminal Code by restricting police powers of arrest for minor offences and requiring the police, as a general rule, to release persons arrested for minor or less serious offences as soon as possible. In addition, a justice will be bound to issue a summons unless the public interest requires a warrant of arrest. Save in very exceptional cases, "cash bail" will be abolished and as a general rule a person charged with an offence will be released simply on his written undertaking to attend court.

## Section 2.—Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the more serious crimes. Offences punishable on summary conviction—those not expressly made indictable—include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable to what extent some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

### Subsection 1.—Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, so that it may be possible to evaluate the population engaged in prohibited activities and to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, although individuals may be charged with more than one offence, only one offence is tabulated for each person. This offence is selected according to the following criteria: (1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage—conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another—for example, charged with murder and convicted of manslaughter—the offence selected is the one for which the person was convicted.

In 1968 there were 57,494 adults charged with 94,838 indictable offences, of whom 49,963 were found guilty of 82,312 offences. In the previous year there were 51,388 adults charged with 86,689 indictable offences, of whom 45,703 were found guilty of 76,681 offences.

<sup>1</sup> Excludes municipal court cases.

Table 2 classifies indictable offences by type of offence for 1967 and 1968. Class I covers offences against the person and in 1968 there were 6,627 males and 303 females convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering, extortion and robbery—serious crimes which involve acts of violence—are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1968 there were 1,138 men and 180 women convicted under federal statutes of whom 1,087 men and 175 women were offenders under the Narcotic Control Act.

<sup>1</sup> Excludes Quebec in 1968.

**Female Offenders.**—There were 6,187 female offenders convicted of indictable offences in 1968 compared with 5,816 in 1967. Of these offenders, Ontario accounted for 2,484, Quebec for 1,279 and British Columbia for 908. The ratio of female offenders convicted to total persons convicted moved slightly downward from 12.7 p.c. in 1967 to 12.4 p.c. in 1968, ranging from 5.1 p.c. in Prince Edward Island to 14.2 p.c. in Ontario.

#### 4.—Females Convicted of Indictable Offences, by Province, 1967 and 1968

**Sentences, Method of Trial and Court Proceedings.**—Table 7 summarizes the first court sentences given for indictable offences, Table 8 shows the method of trial and disposition of cases, and Table 9 shows persons charged and convicted of indictable offences according to trial court.

Two kinds of sentences maintain for a certain period of time a relationship between the person dealt with by the court and the legal institutions of a community—probation and commitment to an institution. There are several types of institutions to which a person can be committed, such as penitentiaries, reformatories, gaols and industrial farms. Theoretically, every institution has a specific purpose which is supposed to be taken into account when arriving at a legal decision. In practice, however, the availability of an institution in a given community is a factor in determining the decision rendered by the court.

**Subsection 2.—Young Adult Offenders (16-24 Years)  
Convicted of Indictable Offences**

Attention is focused on the needs of the young adult offenders of from 16-24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational, trade training and other formative disciplines. The young men and women in this age group accounted for 23.4 p.c. of the total population 16 years of age or over in 1968 but they formed over half of the criminal population committing indictable offences. The group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training. There were 25,148 young adult offenders in 1968, an increase of 3.0 p.c. over the previous year.

#### Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under the Criminal Code or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of a jury. Such cases are heard in police court with a minimum of delay.

## 13.—Convictions for Summary Conviction Offences, by Type, 1968 and 1969

<sup>1</sup> Excludes Quebec.<sup>2</sup> Includes Quebec figures for dangerous driving and failing to stop at scene of accident.

## Subsection 4.—Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a judge and jury or a judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1969, there were 3,719 appeals in indictable cases disposed of by the courts, of which 360 were Crown appeals and 3,359 appeals of the accused. Of the Crown appeals, 75 were from acquittal and 285 from sentence. Appeals in summary conviction cases disposed of by the courts numbered 1,677 in 1969. Of these, 224 were appeals of the informant and 1,453 appeals of the accused. The informant appeals comprised 176 from acquittal and 48 from sentence, and appeals of the accused comprised 1,189 from conviction and 264 from sentence.

### Section 3.—Juvenile Delinquents

*Juvenile Delinquent*, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency. The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age; in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec, Manitoba and British Columbia under 18 years. Up to 1967, it was the practice of Statistics Canada to publish information about juvenile delinquents 16 years of age or over separate from that of juveniles under 16 years of age. From 1967 on, the figures include all those considered as juveniles by the respective provinces, regardless of the differing upper age limits.

Included in the statistics of juvenile delinquents (Tables 14-21) are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency—the most serious—was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

It should be noted that all 1969 figures given in Tables 14-21 exclude those for Manitoba because of the initiation of a revised reporting program in that province. Statistics for Manitoba, as well as a description of the change, are given separately in Tables 22 and 23, pp. 503-504.

#### 14.—Juveniles brought before the Courts, by Province, and Total Dismissed and Delinquent, 1965-69

Province or Territory	1965	1966	1967 <sup>1</sup>	1968 <sup>1</sup>	1969 <sup>2</sup>	Percentage Change, 1968-69 <sup>2</sup>

**Delinquents in Manitoba.**—As stated on p. 499, the Province of Manitoba initiated a revised reporting program for delinquency in 1969. Basically, there are three groups of figures included in the new program: (1) those showing juveniles involved in judicial, non-judicial and no-contact procedures where the juvenile is counted only once in the year; (2) a count of all delinquencies recorded during the year; and (3) a group of all delinquencies

against the Highway Traffic Act, including a duplicate count of juveniles who have more than one charge against them and regardless of the number of appearances at court. The information on informal or "non-judicial" and "no-contact" cases, under (1), was previously unreported.

In 1969, there were 4,975 juveniles charged with delinquencies in Manitoba. Of this number 1,829 were found delinquent, 20 resulted in no action, 17 were dismissed, 446 were adjourned, 36 were referred to adult court, and 2,627 were dealt with informally. The disposition of sentence for those found delinquent was: reprimand, 120; indefinite detention, 1; probation, 893; fine or restitution, 459; training school, 108; mental hospital, 1; suspended disposition, 200; and suspended driver's licence, 54.

<sup>1</sup> Unduplicated.**Section 4.—Correctional Institutions and Training Schools****Subsection 1.—Statistics of Correctional Institutions and Training Schools**

Correctional institutions may be classified under four headings: (1) Penitentiaries—operated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories—operated for adult offenders by the provinces in which individual sentences of up to two years are served; (3) Common Gaols—operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools—operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In-custody" figures shown in Table 24 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on parole, deaths, pardons and releases on court order. In-custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 24 and 25 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments is made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1965; however, totals for each type of institution have shown a tendency to level off or decline slightly.

**Subsection 2.—The Canadian Penitentiary Service**

The Penitentiary Service operates under the Penitentiary Act (RSC 1970, c. P-6) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith. In the year ended Mar. 31, 1971, the federal penitentiary system consisted of seven maximum security institutions, nine medium security, 12 minimum security and eight specialized institutions.

The maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at Dorchester, N.B.; Ville de Laval and Ste. Anne des Plaines, Que.; Kingston and Millhaven, Ont.; Prince Albert, Sask.; and New Westminster, B.C. The maximum security institutions at Ste. Anne des Plaines, and Millhaven were constructed as part of a plan to abandon the St. Vincent de Paul and Kingston Penitentiaries.

The medium and minimum security institutions and the correctional camps receive inmates transferred from the maximum security institutions on the basis of their suitability for special forms of training, including vocational training. The medium security institutions are located as follows: the Springhill Institution at Springhill, N.S.; the Federal Training Centre and the Leclerc Institution at Ville de Laval, Que.; the Cowansville Institution at Cowansville, Que.; the Collins Bay Penitentiary and the Joyceville Institution within a few miles of Kingston, Ont.; the Warkworth Institution at Campbellford, Ont.; the Manitoba Penitentiary at Stony Mountain, Man.; and the Drumheller Institution at Drumheller, Alta. The minimum security institutions are located as follows: the Dorchester Penitentiary Farm Annex at Dorchester, N.B.; the Blue Mountain Correctional Camp at Westfield, N.B.; the Laval Minimum Security Institution at Ville de Laval, Que.;

the Ste. Anne des Plaines Minimum Security Institution at Ste. Anne des Plaines, Que.; the Joyceville Institution Farm Annex at Joyceville, Ont.; the Collins Bay Penitentiary Farm Annex near Kingston, Ont.; the Beaver Creek Correctional Camp near Gravenhurst, Ont.; the Landry Crossing Correctional Camp near Petawawa, Ont.; the Manitoba Penitentiary Farm Annex at Stony Mountain, Man.; the Saskatchewan Penitentiary Farm Annex at Prince Albert, Sask; the William Head Institution at Metchosin, B.C.; and the Agassiz Correctional Camp at Agassiz, B.C.

The Penitentiary Service operates specialized institutions located as follows: the Special Correctional Unit at Ville de Laval, Que., for the training of hostile inmates; the Matsqui Institution at Abbotsford, B.C., for the training of narcotic addicts; the Mountain Prison near Agassiz, B.C., for the training of older male recidivists; the Prison for Women at Kingston, Ont.; and four Community Release Centres located at Montreal, Toronto, Winnipeg and Vancouver. Some inmates sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under the provisions of Sect. 14 of the Penitentiary Act.

Headquarters of the Penitentiary Service is located at Ottawa and regional directorates at New Westminster, B.C., Kingston, Ont., and Ville de Laval, Que., for the Western, Ontario and Quebec areas, respectively. Three Correctional Staff Colleges—at Kingston, Ville de Laval and New Westminster—are operated for the training of recruits and for the advanced training of penitentiary officers. These Staff Colleges also provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

As at Mar. 31, 1971, about 64 p.c. of the inmates were in medium and minimum security institutions or specialized institutions. New institutions have been carefully designed to provide facilities for the rehabilitation of their inmates. All afford space for both indoor and outdoor recreation. Some of the old institutions are being brought up to date to meet present-day needs and others are being phased out.

Every inmate, on arriving at a penitentiary, is examined and classified. Young or first offenders are segregated from the recidivists. Doctors, psychologists and social workers examine them from the viewpoints of physical and mental health, abilities, training and need for schooling, so as to launch them on a program of rehabilitation. The program of the Correctional Services is directed primarily toward assisting the inmate in every way to regain his proper place in society. The facilities to achieve this are available and the staff involved in the process is dedicated. Academic opportunities are provided and inmates attend classes on either a full-time or a part-time basis. Other students advance their education by correspondence courses offered at the elementary, secondary or university level. In 1970-71, 3,563 inmate students participated in the academic education program, often with a view to acquiring a trade or a profession. Expanded use was made of day parole and temporary absence in order to enable students to attend community education facilities. Thirty inmate students were attending universities, secondary schools or community colleges at year-end. Religious programs are provided for all inmates and from 20 p.c. to 50 p.c. of them participate in worship services. Most chapels run multi-purpose chapel programs during the week where, besides religious instruction, other activities related to religious services are carried on. There is active inmate involvement in this section of the program, including considerable community participation.

Plans are being finalized to introduce interdisciplinary teams to be responsible for groups of inmates on a living unit basis in five of the newer institutions. The concept is an attempt to "personalize" the contacts between staff and inmates, to activate interpersonal relationships so that inmates, many of whom have regarded authority—whether inside or outside institutions—as antagonistic, will learn to relate to it. The concept of the living unit which breaks down the inmate population into smaller groups, with assigned staff, facilitates the establishment of interpersonal relationships.

*The resources of St. Lawrence Community College at Kingston, Ont., are made available to inmates of Collin's Bay Penitentiary. During 1970-71, as many as 400 inmates will be either improving their academic education or taking post-secondary courses in business administration and polytechnics.*

Temporary absences continued to increase sharply during the 1970-71 fiscal year and easily exceeded 20,000. Such leaves are granted for periods of up to three days by the Institutional Head and up to 15 days by the Commissioner, for humanitarian, rehabilitative and medical reasons. The failure rate of this program was a fraction of 1 p.c.

A sound and healthy program of evening and weekend activities has been developed and expanded over the past year. Sixteen Citizen Participation Committees have been established at institutions, comprising 120 citizens, and more than 10,000 citizens are involved in inmates' programs associated with the leisure-time activities of inmates. These programs include A.A., drama, singing, musical instruction, guitar groups and public speaking as well as a diversified and varied assortment of discussion groups run by private agencies, professional and voluntary citizens and community groups, lectures, films, sports and recreation.

The inmate who is in need receives professional services or counselling by staff specialists; 23 physicians, 20 dentists, 23 psychiatrists, 30 psychologists and 107 classification officers and social workers, employed on a full-time or a part-time basis, serve an inmate population of about 7,450.

### **Subsection 3.—The National Parole System**

Parole is a means by which an inmate in any correctional institution in Canada, if he gives definite indication of his intention to reform, can be released to finish his sentence in the community. The purpose of parole is the protection of society through the rehabilitation of the inmate. The true purpose of corrections should be the reformation of the offender

and not merely vengeance or retribution. Nevertheless, the National Parole Board is as much concerned with the protection of society as with the reformation of the offender and supervision is as much a part of the parole system as is guidance. The Board selects those inmates who show sincere intention to reform and assists them in doing so by granting parole. The inmate then is allowed to serve the remainder of his sentence in society, but under supervision, subject to certain restrictions and conditions. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence; this is the function of the court. Nor is parole granted for clemency or mercy.

The National Parole Board is an independent agency of the Department of the Solicitor General of Canada, operating under the authority of the Parole Act (RSC 1970, c. P-2), which came into force Feb. 15, 1959 replacing the Ticket-of-Leave Act, and was amended in 1967 and in 1969. The Board is composed of a chairman and eight other members. It has jurisdiction for parole over any adult inmate of any prison in Canada who was convicted of an offence against an Act of the Parliament of Canada and has authority to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle. It has no jurisdiction over a child under the Juvenile Delinquents Act, or an inmate serving a sentence for a breach of a provincial statute, such as a liquor control Act.

A person is sent to a federal institution if his sentence of imprisonment is two years or more, or to a provincial institution if his sentence is less than two years. All inmates can become eligible to apply for parole and need not obtain the services of a lawyer to do so. The date of parole review, to grant or refuse parole, for an inmate in a federal penitentiary is set within six months of his entry into the institution. If the sentence is under two years, the inmate is eligible for parole after one third of the sentence is served; if the sentence is two years or more, the inmate is eligible after one third of the sentence is served or after four years, whichever is less, although he must serve at least nine months of his sentence. The Board has the authority to grant an earlier release in exceptional circumstances where the case is deserving and where the best interests of the community and the inmate will be served. Where the sentence is for life, eligibility comes after seven years. If the inmate is serving a life sentence where the death sentence has been commuted, or a life sentence as a minimum punishment, parole cannot be granted until 10 years of the sentence have been served; in both cases consent for parole must be given by the Governor in Council.

Unless an inmate advises the Board in writing that he does not want parole, the Board will review his case every two years, whether he applies or not, until he is either granted parole or his sentence is served. However, once eligible for parole, the inmate may apply at any time. An inmate in a provincial institution must either apply or have someone apply on his behalf. When an application is received an investigation lasting about four months is begun and the results presented to the Board for decision. In addition, a representative of the Board interviews the inmate.

The decision of the Board with respect to any one inmate is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with him. Reports are also obtained, when available, from a psychologist or a psychiatrist and, if necessary, a community investigation is conducted to secure as much information as possible about his family and background, his work record and his position in the community. From these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life.

When all the reports are received and the community investigation completed, they are analysed and presented to the Board for consideration. Parole for inmates in provincial institutions is granted or refused on the basis of these reports and investigations. For the inmate in a federal institution there is one more step before the Board makes its decision.

He is interviewed by a panel of two or more Board members before his parole eligibility date to clarify or amplify his reasons for requesting parole and other aspects of his case that may have come to light through the reports and investigations.

A person on parole is under the care of a supervisor in one of the Board's 34 district offices, an after-care agency worker, or a probation officer. If he violates the conditions of his parole or commits a further offence or misbehaves in any manner, the Board may suspend or revoke his parole and return him to the institution to serve the part of his sentence that was outstanding at the time his parole was granted. If a parolee commits an indictable offence, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence plus any new term to which he is sentenced for the commission of the new offence. The district representative may also issue a Warrant of Suspension and have a parolee placed in custody if it is necessary to prevent a breach of any term or condition of the parole. These officers are thus able to exercise effective and adequate control over all parolees in their respective areas.

During the 12 years of its operation, up to December 1970, the Parole Board granted parole (of all types) to 33,532 inmates. During the same period, 3,310 parolees were returned to prison; 1,564 parolees were revoked for misbehaviour or the commission of a minor offence, and 1,746 parolees were forfeited for the commission of an indictable offence.

## Section 5.—Police Forces and Crime Statistics

**Organization of Police Forces.**—The police forces of Canada are organized in three groups: (1) the federal force, which is the Royal Canadian Mounted Police; (2) provincial police forces—the Provinces of Ontario and Quebec have their own provincial police forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) municipal police forces—most urban centres of reasonable size maintain their own police forces or engage the services of the provincial police, under contract, to attend to police matters. In addition, the Canadian National Railways, the Canadian Pacific Railway Company and the National Harbours Board have their own police forces.

*The Royal Canadian Mounted Police.*—The Royal Canadian Mounted Police is a civil force maintained by the Federal Government. It was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories and, in recognition of its services, was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Thunder Bay and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force now operates under authority of the Royal Canadian Mounted Police Act (RSC 1970, c. R-9). It is responsible to the Solicitor General of Canada and is controlled and managed by a Commissioner who holds the rank and status of a Deputy Minister and is empowered under the Act to appoint members to be peace officers in all provinces and territories of Canada.

The administration of justice within the provinces, including the enforcement of the Criminal Code of Canada, is part of the power and duty delegated to the provincial governments and all provinces, except Ontario and Quebec, have entered into contracts with the Royal Canadian Mounted Police to enforce criminal and provincial laws, under the direction of the respective Attorneys General. In addition, in these eight provinces, the Force is under agreement to provide police services to 155 municipalities, thereby assuming the enforcement responsibility of municipal as well as criminal and provincial laws within these

communities. The Yukon and Northwest Territories are policed exclusively by the Royal Canadian Mounted Police and therefore criminal offences, federal statutes and all ordinances of the territories fall within the ambit of Force responsibility. The Force maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization, which has headquarters in Paris.

The 12 Operational Divisions, alphabetically designated, make up the strength of the Force across Canada; they comprise 41 subdivisions which include 691 detachments. "Headquarters" Division, as well as the Office of the Commissioner, are located at Ottawa. Divisional headquarters, for the most part, are located in the provincial capitals, except for "C" Division which is in Montreal and "A" and "G" Divisions which are in Ottawa. "Air" Division, also with headquarters in Ottawa, supports the Operational Divisions by providing transportation and related services. "N" Division in Ottawa and "Depot" Division in Regina are training divisions.

A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. The focal point of the criminal identification work of the Force is the Directorate of Laboratories and Identification; its services, together with those of the divisional and subdivisional units and the five Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

As of Mar. 31, 1971, the Force had a total strength of 12,992, including regular members, special constables, civilian members and Public Service employees.

*Quebec Police Force.*—The Quebec Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of all laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. The Montreal Division has three subdivisions with headquarters at Granby, Hull and Montreal; the Quebec Division has two subdivisions with headquarters at Chicoutimi and Quebec City. There are 108 detachments throughout the province—59 in the Montreal Division and 49 in the Quebec Division. In addition, two pilot districts became operational in 1970—the Estrie Division consisting of six detachments with headquarters at Sherbrooke and the Lower St. Lawrence District consisting of three sections directing 21 detachments with headquarters at Rimouski. The Force at the end of 1970 had 3,402 members, including officers, non-commissioned officers and constables.

The Quebec Police Force is under the command of a Director General, assisted by four Deputy Directors General and a Comptroller of Personnel. Each Division is headed by a Chief Inspector and each subdivision by a commissioned officer.

*Ontario Provincial Police.*—The Ontario Provincial Police, a Crown force, is the third largest deployed force on the North American Continent, having a total authorized strength of more than 4,877 (1971) uniformed and civilian personnel.

The Force is administered from general headquarters at Toronto by a Commissioner who has the rank and status of a Deputy Minister under the Minister of Justice. Other senior executive officers include two Deputy Commissioners and five Assistant Commissioners. The Force has two principal sides—Operations and Services—which are administered under the supervision of the Deputy Commissioner Operations and the Deputy Commissioner Services, respectively. In turn, five Divisions at the next level are administered by their respective Assistant Commissioners—Assistant Commissioner Field, Assistant Commissioner Traffic, Assistant Commissioner Administration, Assistant Commissioner Staff Services and Assistant Commissioner Special Services.

Specialized Branches under the Special Services Division include Auto Theft, Criminal Investigation, Anti-rackets, Security Intelligence, Criminal Intelligence, Anti-gambling and Liquor Laws Enforcement.

For policing and administration purposes, the province is divided geographically into 17 districts. In the field, there are 194 detachments controlled through 17 district headquarters located at Chatham, London, Burlington, Niagara Falls, Downsview, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, South Porcupine, Thunder Bay and Kenora. Fifteen municipalities are policed under special contract.

Under provisions of the Ontario Police Act, the Force is responsible for: (1) enforcing federal and provincial statutes in those areas that are not required to maintain their own police department; (2) maintaining a traffic patrol on the more than 10,000 miles of King's Highways and 65,000 miles of secondary county and township roads; (3) enforcing the Liquor Licence Act and the Liquor Control Act for Ontario; (4) maintaining a Criminal Investigation Branch and other specialized branches to assist all other forces in the investigation of major crimes; and (5) assisting other forces by providing additional manpower in the event of emergencies.

Under the Staff Services Division, the Central Records and Communications Branch offers 24-hour-seven-day-week service to all police departments in Ontario on such matters as criminal records, fingerprint records, missing and wanted persons, dry cleaning and laundry mark identification, and stolen and recovered property lists.

The Force operates one of the largest frequency modulation radio networks in the world, with 107 fixed radio stations and more than 1,300 radio-equipped mobile units including motorcycles, marine units and aircraft. It also operates the Ontario Provincial Police telecommunications network connecting all 17 districts as well as other police departments on a local, national and international basis. Extensions to routine police service are provided by canine, SCUBA and marine-bush rescue units strategically located throughout the province and available to other law-enforcement agencies upon request.

In addition to regular constable recruitment, the Force has a cadet program making it possible for qualified young men to create for themselves a career in a long-established police force. Ranking officers, from inspector up to and including the Commissioner, receive the Queen's Commission in the same manner as maintained with the Canadian Armed Forces.

*Municipal Police Forces.*—Provincial legislation makes it mandatory for cities and towns to furnish adequate municipal policing for the maintenance of law and order in their communities. Also, all villages and townships or parts of townships that have a population density and a real property assessment sufficient to warrant maintenance of a police force, and have been so designated by Order in Council, are made responsible for the adequate policing of their municipalities.

**Uniform Crime Reporting.**—The present method of reporting police statistics (police administration, crime and traffic enforcement statistics), known as the Uniform Crime Reporting Program, was started on Jan. 1, 1962, and was developed by the (then) Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police Committee on Uniform Crime Reporting.

*Police Personnel.*—As shown in Table 26, police personnel in Canada numbered 46,034 at the end of 1969, including 38,589 sworn-in policemen, 6,957 other full-time employees serving as clerks, technicians, artisans, commissionaires, guards, special constables, etc., and 488 cadets. The ratio of police personnel per 1,000 population was 2.2 and the ratio of police was 1.8. Provincial ratios for police personnel ranged from 1.2 to 4.2 per 1,000

persons and for police only from 1.1 to 3.9. In 12 selected metropolitan areas there were 16,424 police personnel including 14,158 police and 2,266 cadets and other full-time employees. Total municipal police personnel numbered 26,013, made up of 24,562 in municipal forces, 1,398 Royal Canadian Mounted Police and 53 provincial police under municipal contracts.

There were five policemen killed by criminal action during 1969 and 5 policemen lost their lives accidentally while on duty. Police transport facilities at the end of the year included 7,732 automobiles, 880 motorcycles, 772 other motor vehicles, 423 boats, 23 aircraft, 237 horses and 79 service dogs.

*Crime Statistics.*—Table 28 shows the number of crimes dealt with by the police in 1969, including offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws; offences cleared by charge and otherwise; and the number of adults and juveniles charged. Offences reported or known to the police but proved unfounded are not shown in the table but numbered 79,623, including 65,097 under Criminal Code classifications, 6,675 under federal statutes, 6,116 under provincial statutes and 1,735 under municipal by-laws, except traffic.

During 1969, the police reported 85,056 offences committed against the person, including 342 murders, 10,736 rape and other sexual offences, and 73,718 offences of wounding and other assaults (not indecent); all offences against the person resulted in the charging of 30,485 persons, 2,110 of them juveniles. During the year there were 607,544 cases of robbery, theft and other offences against property, resulting in 113,313 persons charged, 37,199 of them juvenile males and 3,433 juvenile females; 57,788 cases of fraud, false pretences, forgery, etc.; 2,136 of prostitution; 1,787 gaming and betting; 5,561 offensive weapons; and 232,789 other Criminal Code offences. In addition to the 47,070 federal statute offences reported, 8,179 were reported under the Narcotic Control Act and 2,341 under the controlled drug part of the Food and Drugs Act; these two classifications resulted in the charging of 6,199 persons.

Provincial and territorial fire marshals and commissioners reported 3,168 suspected or known incendiary offences, of which 1,038 were proved unfounded; 473 offences were reported cleared by charge, resulting in 378 adults and 194 juveniles being charged.

The number of motor vehicles stolen was 58,861 (an estimated 713.1 per 100,000 vehicles registered); 53,071 or 90.2 p.c. of these vehicles were recovered. Police were asked to locate 21,696 missing adults and 43,592 missing juveniles; 20,527 adults and 42,733 juveniles were found. The number of drownings reported by police was 1,479.

<sup>1</sup> Except traffic.<sup>2</sup> Except traffic, Narcotic Control Act and Food and Drugs Act.

During 1969, police departments in Canada reported 110,734 Criminal Code traffic offences, resulting in 70,208 persons charged, 1,765 of them females. Total charges reported under federal statutes numbered 6,148, provincial statutes 1,970,377 and municipal by-laws 387,397, excluding parking violations; the latter numbered 4,877,700, most of them reported by municipal police. There are certain traffic offences under provincial statutes which are almost identical to those under the Criminal Code. These are shown separately for 1968 and 1969 in Table 29.

The number of traffic accidents reported was 626,906, of which 4,644 involved fatalities, 116,935 resulted in injuries and 421,620 involved property damage of over \$100. There were 5,543 persons killed in traffic accidents, including 4,098 drivers and passengers, 1,225 pedestrians, 187 cyclists and 33 others; persons injured numbered 173,845.

# CHAPTER X.—RENEWABLE RESOURCES AND THE ENVIRONMENT

## CONSPECTUS

	PAGE		PAGE
SECTION 1.—THE FEDERAL DEPARTMENT OF THE ENVIRONMENT.....	516	SECTION 3.—FEDERAL-PROVINCIAL ENVIRONMENTAL PROGRAMS.....	520
SECTION 2.—FEDERAL LEGISLATION RELATING TO ENVIRONMENTAL PROGRAMS.....	519	SECTION 4.—INTERNATIONAL ENVIRONMENTAL PROGRAMS.....	521

Over the past several years Canadians have become increasingly aware of the problems of environmental quality management. The deteriorating quality of Canada's waters, its air and its soils, the noise and congestion of urban life, and the exploitation of its mineral resources, its fisheries and forests and its wildlife became vitally important to many concerned and conscientious citizens. Man was clearly having a greater and greater impact on his natural environment and yet he had no definite idea of what the delicate ecosystem could bear in the way of man's intrusion. A range of problems relating to the wise use of the natural environment became one of the major issues of the late 1960s and promises to remain so throughout the rest of this century. Obviously, an issue of this magnitude required an immediate response from all governments in Canada. It was vital to develop a consistent philosophy regarding man's place in the Canadian and world environments and to develop a series of policies that could give effect to this philosophy.

The goals of the Federal Government in this respect are, on the one hand, to ensure that all Canadians have access to a style of life befitting a nation rich in natural resources and, on the other hand, to safeguard these natural resources for future use by the present generation and the generations to follow. To this end, the Department of the Environment has been established—to help to ensure the protection, preservation and enhancement of Canada's environment while encouraging efficient use of its natural resources.

The Department is concerned primarily with renewable resources—air, water, fish, forests and wildlife. Its research, planning and management programs are directed toward incorporating environmental design into resource management processes. How many salmon can be taken from the Fraser River without jeopardizing future generations of fish? How much effluent can be discharged safely into a river? How rigidly can sanctions be employed against polluters without causing adverse economic consequences in an area? These are examples of the extremely difficult questions that need to be faced, and different answers apply in different cases.

### Section 1.—The Federal Department of the Environment

Early in 1970, the former Department of Fisheries and Forestry; the Fisheries Research Board; the Canada Land Inventory of the Department of Regional Economic Expansion; the Canadian Wildlife Service of the Department of Indian Affairs and Northern Development; the Meteorological Service (now the Atmospheric Environment Service) of the Ministry of Transport; the Water Sector of the Department of Energy, Mines and Resources; and the Air Pollution Control and Public Health Engineering Divisions of the Department of National Health and Welfare were combined and reorganized to create the

new Department of the Environment. The general goals of the new Department have been stated as follows: (1) to maintain the capacity to meet historical and statutory responsibilities for research and management of air, water, fish, forest and wildlife resources; (2) to clean up and control pollution; (3) to assess and control the environmental impact of major new programs, projects and developments; (4) to improve the understanding of long-term environmental phenomena; (5) to promote and support international environmental initiatives; and (6) to create a better public awareness and understanding of environmental issues.

Since almost all of these goals involve co-operation and co-ordination with other departments and with other governments both in Canada and internationally, the Department of the Environment sees itself as embarked upon a co-operative endeavour in which it will act both to carry out programs of its own and to catalyze programs of others, to the end of improving the Canadian environment.

### **The Departmental Structure**

The Department is divided into seven "Services", each of which has responsibility for some particular area of departmental programs; they are described briefly below. More detail on the activities of most of these services is given in other chapters of this publication, as indicated by the page references.

**The Atmospheric Environment Service.**—This Service is responsible for planning, establishing and operating air-quality networks and surveys, for providing an information service on the state of the atmosphere and trends in its quality, for collecting and analysing weather data and ice-movement data, for atmospheric research, for air and noise pollution research and finally for weather forecasting. (See also pp. 49-53).

**The Fisheries Service.**—The responsibilities of the Fisheries Service include activities for achieving the best economic utilization of the fisheries resource; and research into the conservation and use of aquatic renewable resources and the biological fitness of the aquatic environment. The Service is also responsible for administering Canada's role in international fisheries, the Fisheries Prices Support Board and the Fisheries Research Board. (See also pp. 686-693.)

**The Lands, Forests and Wildlife Service.**—The responsibilities of this Service include land classification and inventory, land use study and planning, forestry research and consultative services, forest products research and consultative services, forest management services on federal lands, conservation and management of migratory birds, wildlife habitat acquisition and management, and wildlife research and consultative services. (See pp. 665-677 for federal and provincial forest management and pp. 708-714 for wildlife conservation.)

**The Water Management Service.**—The broad mandate of this Service is to improve the management and use of Canada's inland and marine water resources. To meet this end, the Service plans for and manages national inland water research and data network programs including the hydrographic surveys and charting programs, undertakes oceanographic research including the operations of the marine Environment Data Centre, and manages a fleet of ships in support of marine and inland survey and research programs. Additionally, the service undertakes co-operative federal-provincial programs for planned water resource management. (See pp. 42-43 for data on Federal Government surveying and mapping.)

**The Environmental Protection Service.**—This new organization within the Department of the Environment takes action in preventing or combating environmental problems for which the Department has responsibility, including pollution control in water and air, solid wastes management and control and disposal of environmental contaminants.

It is responsible for the control of activities having an ecological impact, for noise control, for the operation of an emergency pollution centre and for environmental protection from federal activities and facilities.

**The Finance and Administration Service.**—The functions of the Finance and Administration Service are to support the over-all departmental program by assisting in the acquisition and deployment of those human, physical and financial resources required for the efficient and effective fulfilment of departmental objectives.

**The Policy Planning and Research Service.**—In contrast to the established groups that were brought together to form the new Department of the Environment, the Policy Planning and Research Service was conceived during the organizational process. It was created to provide an over-all framework of policy and planning advice; to co-ordinate the Government's relationships respecting environmental and resource matters with the provinces and with other countries; and to develop and co-ordinate a comprehensive approach to departmental science policy and research activities. The Service is comprised of three directorates—the Policy and Planning Directorate, the Intergovernmental Affairs Directorate and the Research Co-ordination Directorate.

The Policy and Planning Directorate develops and recommends on broad departmental objectives, policies, plans, priorities and resource allocations and has the capability to analyse policy and program alternatives involving a number of disciplines. The Intergovernmental Affairs Directorate is responsible for co-ordinating the extensive formal interrelationships of the Department with other federal departments and agencies and with provincial and foreign governments. It will co-ordinate negotiations with the provinces and foreign governments, as well as the Department's participation in the many international organizations concerned with the environment and renewable resources, and will

*Canada's major airlines are progressing with their programs to fit aircraft engines with anti-smoke devices to reduce exhaust pollution. An Air Canada DC-9, in a flypast, shows the difference in smoke emission between a modified and an unmodified engine.*

assist in establishing and organizing Canada's approach to international environmental quality. The Research Directorate is responsible for developing science policy advice for the Department by recommending on how science and technology can best be used or developed to contribute to departmental objectives. It co-operates with the central science advisers to the government, with the new Ministry of State for Science and Technology, and other government departments. It recommends on research priorities and resource allocations to ensure that scientific programs that involve more than one service of the Department are undertaken in a co-ordinated manner.

## Section 2.—Federal Legislation Relating to Environmental Programs

There are already on the statute books a large number of Acts that are important in renewable resources and environmental quality management. A listing of the major pieces of legislation includes the following:

<u>Legislation</u>	<u>Responsible Department</u>
The Fisheries Act (RSC 1970, c. F-12, amended 1970)	Environment
The Canada Water Act (and phosphate regulations) (SC 1969-70, c. 52)	Environment
The Migratory Birds Convention Act (RSC 1970, c. M-12)	Environment
The International River Improvements Act (RSC 1970, c. I-22)	Environment
The Game Export Act (RSC 1970, c. G-1)	Environment
The Fisheries Development Act (RSC 1970, c. F-21)	Environment
The Clean Air Act (SC 1970-71, c. 47)	Environment
The Forestry Development and Research Act (RSC 1970, c. F-30)	Environment
The Navigable Waters Protection Act (RSC 1970, c. N-19)	Transport
The Canada Shipping Act (RSC 1952, c. 29, amended 1971)	Transport
The National Harbours Board Act (RSC 1970, c. N-8)	Transport
The St. Lawrence Seaway Authority Act (RSC 1970, c. S-1)	Transport
The Motor Vehicle Safety Act (SC 1969-70, c. 30)	Transport
The Arctic Waters Pollution Prevention Act (SC 1969-70, c. 47)	Indian Affairs and Northern Development
The Northern Inland Waters Act (SC 1969-70, c. 66)	Indian Affairs and Northern Development
The National Parks Act (RSC 1970, c. N-13)	Indian Affairs and Northern Development
The Dominion Water Power Act (RSC 1970, c. W-6)	Indian Affairs and Northern Development
The Prairie Farm Rehabilitation Act (RSC 1970, c. P-17)	Regional Economic Expansion
The Fund for Rural Economic Development Act	Regional Economic Expansion
The Atlantic Provinces Power Development Act (RSC 1970, c. A-17)	Energy, Mines and Resources
The National Energy Board Act (RSC 1970, c. N-6)	Energy, Mines and Resources
The Resources and Technical Surveys Act (RSC 1970, c. R-7)	Energy, Mines and Resources
The Veterans Land Act (RSC 1970, c. V-4)	Veterans Affairs

As the list indicates, not all federal agencies dealing with environmental and renewable resource matters have been brought together in the new Department of the Environment. For example, the Department of Energy, Mines and Resources with its responsibilities for the Geological Survey of Canada and the Fuels Combustion Research Centre provides an important contribution to the environmental and renewable resource field; the Department of Agriculture carries out environmental research and administers the Canada Committee on Pesticide Use in Agriculture; the Department of Indian Affairs and Northern Development is significantly involved in environmental and renewable resource activities through its responsibilities for northern development and the National and Historic Parks. Other departments having responsibilities in this area include the Department of Regional Economic Expansion; the Department of Finance which funds resource programs and promotes economic development; the Ministry of Transport which administers the Canada Shipping Act containing legislation respecting the prevention of marine pollution; the Department of External Affairs which is responsible for co-ordinating international relations and environmental and resource issues of a multinational complexion; and the Ministry of State for Urban Affairs which is responsible for promoting research into urban environmental problems. Indeed, all departments of government are concerned with the impact of their activities upon the environment.

In addition, there are Crown corporations, boards, and quasi-governmental organizations with an interest in resource development and the environment; these include the Northern Canada Power Commission, the Northern Transportation Company, the National Harbours Board and the St. Lawrence Seaway Authority. The Central Mortgage and Housing Corporation provides funds for municipal sewerage treatment facilities. Other agencies, such as the National Research Council, award grants-in-aid of research into resources and environmental problems.

### Section 3.—Federal-Provincial Environmental Programs

Jurisdiction over some natural resources, such as water, is shared by the federal and provincial governments. In other instances where jurisdiction rests with one level of government, such as the federal responsibility for fisheries and provincial responsibility for forests, management practices for one resource may affect the management of others. Consequently, many of the Federal Government's environmental programs are carried out in co-operation with the provinces.

For water resources there are only two areas in which jurisdiction is not shared—the northern territories, and the sea and sea-bed beyond the recognized boundaries of the coastal provinces and out to the limits established by national claim and international convention. Within the boundaries of the provinces, however, both the federal and provincial governments possess significant, and sometimes overlapping, responsibilities.

Given the fact of divided jurisdiction, integrated water management required institutional arrangements within which all jurisdictions, competences and capabilities can be brought together for joint goal setting, planning and operation. A number of these arrangements were established before the formation of the Department of the Environment. New consultative committees have been set up with each province to develop improved understanding of mutual problems and set priorities for joint action. The preparatory work for the Saint John River Basin Agreement between Canada and New Brunswick, under authority of the Canada Water Act, was facilitated by the Canada-New Brunswick Consultative Committee. It is anticipated that more integrated water management programs jointly undertaken by the provincial and federal governments will be agreed to throughout Canada.

On Aug. 31, 1970, a major integrated management study agreement was signed by the Governments of Canada and Manitoba. The purpose of the agreement is to determine the environmental effects of changing the levels of Lake Winnipeg and the stream flows in the Churchill and Nelson river systems caused by the development of the hydro-electric potential of north-central Manitoba.

*A used sand and gravel pit in Ontario became a sparkling lake with grassed and treed shores when the owning company, concerned with the preservation of the environment, resolved to leave behind beauty spots for the enjoyment of the local residents rather than ugly scars on the land. This lake and park area was turned over to the regional conservation authority.*

Two current programs of major importance can be cited to exemplify the Federal Government's concern for the environment. The first program, undertaken in co-operation with the Province of Quebec, is an assessment of potential environmental impact associated with a large hydro-electric and other resource development proposal for the watersheds of southeastern James Bay. The second program is an assessment of the potential environmental impact associated with the proposal for construction and operation of a major oil or gas pipeline and support facilities from the Arctic to Central Canada. Results of these study programs will be incorporated into the design of the development projects.

Co-operative research programs have been developed with industry and other organizations to reduce water pollution from pulp and paper mills. Recipients of the contracts were: the Pulp and Paper Research Institute, Pointe Claire, Que.; the B.C. Research Council, Vancouver; Domtar Limited, Cornwall, Ont.; MacMillan Bloedel Research Ltd., Vancouver; and the Research and Productivity Council of New Brunswick, Fredericton.

Some other examples of established federal-provincial co-operative arrangements include the Prairie Provinces Water Board which apportions water among the three provinces, and the Nelson River Basin Board which is at present undertaking a major water-supply study. There are joint federal-provincial arrangements for the protection and use of other renewable resources as well.

#### **Section 4.—International Environmental Programs**

The commitment of Canada to international and global resource management is implicit in the many international boards, commissions and other arrangements in which Canada participates.

The International Joint Commission was established to fulfil the provisions of the International Boundary Waters Treaty of 1909 between the United States, Great Britain

and Canada. Three commissioners are appointed by the President of the United States and three by the Government of Canada. The Commission deals with the use, obstruction and diversion of boundary waters and rivers crossing the International Boundary. It conducts investigations on water use problems with international implications and reports its findings with recommendations to both governments.

International boards of control that report to the International Joint Commission include the International St. Lawrence Board of Control concerned with levels of Lake Ontario and the regulation of outflow from the lake; the St. Croix Board, concerned with water levels and supervision of dam construction; the Lake of the Woods Board, the Lake Superior Board, the Rainy Lake Board and the Kootenay Board, all of which are concerned with water levels; the Columbia River Board, concerned with the effects of the Grand Coulee dam; the Souris River Board, concerned with water allocation; and the Niagara Board, concerned with levels of Grass Island Pool and the Lake Erie ice boom. Functions similar to those of the Boards are undertaken respecting the measurement and apportionment of waters of the St. Mary and Milk Rivers. Also reporting to the International Joint Commission are three international engineering boards for the Saint John, St. Croix, Souris and Red rivers. A technical Advisory Board on Air Pollution is concerned with the occurrence of air pollution anywhere along the International Boundary. An Advisory Board on Control of Pollution of Boundary Waters, which reports to the International Joint Commission, is concerned with the connecting channels of the Great Lakes. Other boards concerned with pollution are: the Advisory Board on Pollution Control-St. Croix River, the International Red River Pollution Board, the International Lake Erie Water Pollution Board and the International Lake Ontario-St. Lawrence Water Pollution Board. The International Great Lakes Levels Board is concerned with investigation and study of water levels of international or boundary waters, reporting to the International Joint Commission.

The *International North Pacific Fisheries Commission* composed of members from Canada, the United States and Japan, operates to fulfil the terms of the International Convention for the High Seas Fisheries of the North Pacific Ocean, the objective of which is to achieve maximum sustained yield in non-territorial waters by co-ordination of the studies necessary to determine appropriate application of treaty principles. (See also pp. 687-688.) The *Great Lakes Fisheries Commission*, composed of two national sections, formulates and co-ordinates research programs and recommends programs for the eradication or control of sea lamprey populations. Responsibility for Canada's treaty obligations is shared by arrangement between the Federal Government and the Government of Ontario. The *Northwest Atlantic Commission* operates under the *International Convention for the Northwest Atlantic Fisheries* signed by Canada, the United States, the United Kingdom, France, Spain, Denmark, Portugal, Iceland, Norway, Italy, Federal Republic of Germany, Japan, Poland, Romania and the Soviet Union. All contracting governments are represented on the Commission and panels have been established with jurisdiction over defined areas of particular interest to some signatories. The Commission has no regulatory powers but conducts scientific investigations and recommends measures to maintain stocks of fish. (See also p. 688.) The *North Pacific Fur Seals Commission* operates under the *Interim Convention on Conservation of North Pacific Fur Seals* signed by Canada, the United States, Japan and the Soviet Union. It undertakes research, recommends enforcement measures required to eliminate pelagic sealing on the high seas, and oversees the apportionment of skins from the Pribilof, Commander and Robben Islands. (See also p. 688.) The *International Whaling Commission*, composed of representatives of Australia, Argentina, France, South Africa, the United States, the United Kingdom, Canada, Norway, the Netherlands, Iceland, Japan, Panama, Mexico, Denmark and the Soviet Union, has power to amend whaling rules and regulations of the International Convention, and to recommend new regulations with respect to the conservation and use of this resource. The *Roosevelt-Campobello International Park Commission* is concerned with the administration and

development of the Campobello Island estate of the late Franklin D. Roosevelt as an international park. The *International Great Lakes Study Group* is a vehicle used by both Canada and the United States for the exchange of information on research activities on the Great Lakes. Its Co-ordinating Committee is responsible for the compilation and computation of hydrologic and hydraulic data of the Lakes Basin. The *International Hydrologic Decade*, composed of 108 participating countries, was created to facilitate a better understanding of hydrologic phenomena to allow prediction of the results of development of water resources, thus permitting better management. Canada is a member of the Co-ordinating Committee and is responsible for the co-ordination of the International Field Year for the Great Lakes. Canada is also a member of the international working groups on water balance, representative and experimental basins, and hydrological problems related to water quality; there are International Hydrologic Decade Committees in eight provinces. To the end of 1970, there were 219 active and completed projects sponsored by the Decade, involving federal, provincial and university personnel. The *International Field Year for the Great Lakes* was established under the auspices of the International Hydrologic Decade. The International Field Year is an intensive study of the Lake Ontario basin involving a large number of Canadian and United States federal, provincial and state agencies and universities. A Steering Committee is guiding the planning program. This study will involve the examination of problems associated with the geology, limnology, hydrology, meteorology, biology and chemistry of the lake and its basin.

The *Canadian National Committee for Geography* of the International Geographical Union is responsible for establishing an organizing committee which will organize and host the 22nd International Geographical Congress in 1972. The Union was established to promote further international co-operation in the field of geography. The Congress is held every four years to bring all members together to study various problems relating to global aspects of geography. The secretariat of the Canadian Committee is located in the Department of the Environment.

The *International Commission on Irrigation and Drainage*, of which Canada is a member, meets every three years to pool world knowledge on specific, current problems in irrigation, drainage and flood-control engineering.

Canada has been a member of NATO since its inception and is also a member of the NATO-sponsored *Committee on Challenges of the Modern Society* (CCMS). The Committee's basic purpose is to consider specific problems relating to the environment and human interaction. To accomplish this, the work of the CCMS is carried out through a series of pilot projects. Canada is a member of the following:—

- (a) **DISASTER ASSISTANCE PILOT PROJECT**—Canada participates in two subsections: Flood Plain Management and Earthquake Hazard Reduction.
- (b) **ROAD SAFETY**—Canada is responsible for the subsection entitled Alcohol and Highway Safety.
- (c) **COASTAL WATER POLLUTION**—Canada and Belgium share in this pilot study undertaken to define criteria and set international standards for pollution levels in open waters, particularly oil pollution.
- (d) **INLAND WATERS POLLUTION**—Canada is the pilot country for this project and is responsible for the administration of its program. Its aim is to develop comprehensive basin plans for inland water pollution-control programs in basins with divided jurisdiction. Canada has designed the comprehensive river-basin planning and management program for the Saint John River as a case study. The study was divided into four sections that are headed by Canada or other co-pilot countries: Water Quality Planning (Canada-France); Simulation Models in Decision-Making (Belgium); Economic Instruments (France); and Process for Setting Water Quality Criteria (Canada).

The *Organization for Economic Co-operation and Development* established an Environment Committee of which Canada is a member. A number of Sector Groups were set up to accomplish the objectives of the Committee in various fields of environmental problems. These include:

- (a) **THE URBAN ENVIRONMENT**—This Sector Group will attempt to suggest measures which could lead to reduction in pollution levels in the urban environment and will attempt to improve management practices relating to the protection and improvement of the urban environment.
- (b) **THE UNINTENDED OCCURRENCE OF TOXIC CHEMICALS**—This Sector Group will look into the possibility of reducing the number of occurrences of toxic chemicals being introduced into the environment, and the relative costs and effects of the various methods utilized.
- (c) **AIR QUALITY**—This Group will investigate and define problems of air pollution and suggest policies and actions for pollution control and air-quality maintenance as well as government implementation schemes of the foregoing.
- (d) **WATER**—This Group will investigate and define the problems of managing water resources and suggest measures for the improvement and preservation of water quality by various management methods and the socio-economic effects of such schemes.

Several *ad hoc* Groups were established to study the following problems:—

- (a) **IMPACT OF THE MOTOR VEHICLE**—This Group hopes to identify the critical environmental hazards caused by the motor vehicle and determine what methods may be used to rectify them.
- (b) **POLLUTION BY THE PULP AND PAPER INDUSTRY**—This Group will try to evaluate present conditions of environmental deterioration that may be attributed to the pulp and paper industry and will examine various pollution abatement techniques currently applied and their socio-economic effects.

The OECD has established a Steering Group on Eutrophication made up of four Study Groups in which Canada has membership or membership plus chairmanship. Canada's role on three of these Study Groups is as follows: Study Group on Detergents (membership); Study Group for Agricultural Nutrient Contributions (membership); and Study Group on Measuring and Monitoring of Lakes for an International Project (membership plus chairmanship).

Canada has established a Canadian National Committee which is responsible for the co-ordination and implementation of all *International Biological Program* projects in which Canada has active participation.

Canada is a member of, and has a strong supporting role in, the *Preparatory Committee* for the United Nations Conference on the Human Environment to be held in Stockholm in 1972. The Conference, dealing with all aspects of the human environment, will attempt to define and illustrate current and emerging problems and propose solutions thereto. Participation in the activities of the Preparatory Committee will involve Canadian representation on a number of Working Groups for the purpose of defining program content, as well as the promotion of specific topics and themes prior to the Conference. The latter Working Groups are those concerned with the *Declaration of the Human Environment*, *Marine Pollution*, *Monitoring and Surveillance*, *Conservation of Areas of Natural, Cultural, and Historical Significance*, and *Soil Preservation and Reclamation*.

Canada plays an active role in the *Inter-Governmental Maritime Consultative Organization*, a specialized agency of the United Nations concerned mainly with maritime affairs. Canada is also a member of the Assembly or plenary body and of the Council (the 18-member governing body) as well as the Maritime Safety Committee. The latter includes the Sub-committee on Marine Pollution on which Canada has representation.

An international conference on marine pollution will be held in 1973 for the purpose of preparing a suitable international agreement for placing restraints on the contamination of the sea, land and air by ships or other equipment operating in the marine environment.

Canada, with the world's longest coastline (which borders on three oceans), is accordingly involved in intensive preparations for the *1973 Law of the Sea Conference*. The concern of Canada is the preservation of marine environment in all its aspects. This must be effected by an elaboration of international controls on ocean dumping, exploration and exploitation of the sea-bed, and entry of oil and other pollutants. Also to be regulated are marine scientific research, the use of the living resources of the sea, and the preservation of unique islands, atolls, wetlands and subsurface areas. Mechanisms for implementation of agreements and for compensation of victims of marine pollution are being worked out. In addition, the advisability of reorganizing international agencies concerned with monitoring and surveillance and basic research is being discussed.

Canada is involved in several monitoring programs sponsored by one or more of the United Nations specialized agencies—

- (a) **MAN AND FOOD**—All monitoring programs, such as those employed by Canada to monitor foods and man for residues build-up, submit their results to the *Food and Agriculture Organization* and the *World Health Organization*.
- (b) **ATMOSPHERE**—Canada is a member of the *World Weather Watch* which forecasts weather patterns, etc., as well as of the *Background Air Pollution Network* which is responsible for the monitoring of atmospheric variables. Canada has established 10 stations in this network. Canada is also an observer in the OECD study of the *Long Range Transport of Air Pollutants* currently being run by the OECD European members.
- (c) **HYDROSPHERE**—Canada chairs the *Working Group for the Integrated Global Ocean Station System* (IGOSS) and the *Group of Experts on the Scientific Aspects of Marine Pollution* (GESAMP). Both of these Groups are concerned with the extent and long-range effects of marine pollution. GESAMP is sponsored by UNESCO through the *Intergovernmental Oceanographic Commission* (IOC). There are also two Intergovernmental Working Groups—the *Intergovernmental Working Group on Marine Pollution* and the *Intergovernmental Working Group on Monitoring and Surveillance*—established for the period preceding the United Nations Conference on the Human Environment, which are seeking to identify those substances that should be monitored in the marine environment. Canada is also a member of the *International Atomic Energy Agency* which is monitoring the oceans and the atmosphere in regard to the level of radioactivity present and the amount of radioactive substances in these two spheres.

Canada has water-quality monitoring and surveillance programs on lakes, rivers and streams crossing the International Boundary, conducted under the auspices of the International Joint Commission (pp. 144-145). Canada is a member of the *Committee on the Peaceful Uses of the Sea-Bed and the Ocean Floor*, concerned with questions relating to marine pollution caused by the exploration and exploitation of marine mineral resources beyond the limits of national jurisdiction. The Committee has sought proposals for the establishment of an international body to regulate the exploitation of the sea-bed.

UNESCO has developed a program entitled "Man and the Biosphere" which will seek to develop the scientific basis for the rational use and conservation of the resources of the biosphere. Canada has established a National Committee to co-ordinate all aspects of this program and sits on the International Co-ordinating Council with representatives from 24 other member States and representatives from the United Nations Food and Agriculture Organization, World Meteorological Organization, International Committee for Scientific Unions, and International Union for the Conservation of Nature and Natural Resources.

## Section 1.—Agricultural Trends and Highlights in 1970 and 1971\*

Agriculture is a large and important industry in Canada. It accounts for well over one quarter of the country's economic activity. It produces products surplus to domestic needs which are exported to world markets and earn about 20 p.c. of Canada's foreign exchange. Canada is the world's fourth largest exporter of agricultural products.

The individual farmer, as both a primary producer and a user of the end products of agriculture, plays an integral role in Canada's economic structure. Through his farming efforts, he provides increasing quantities of food for a growing urban population, and through substantial exports, he earns foreign exchange which creates a higher standard of living for Canadians. He also, through his expenditures on goods and services, contributes extensively to the well-being of other industries and businesses. Farm purchases of machinery and other farm-related goods have assisted in the expansion of industrial employment through the years. The farm machinery and feed processing industries particularly are directly influenced by farm prosperity but many jobs in petroleum, rubber, automotive, hardware, paint, chemical and electrical plants also depend on farm customers. In addition, numerous manufacturing plants across the country are engaged in processing goods produced on Canadian farms.

However, although agricultural production has continued to climb, both the number of farms and the farm labour force have declined over the past decade, affected by increased farm mechanization and marketing trends. The number of Canadian farms dropped from 481,000 at the date of the 1961 Census to 431,000 in 1966; by 1980, it is expected that there will be only about 315,000 farms in Canada. In 1970, the total employment in Canadian

\* Prepared (August 1971) under the direction of S. B. Williams, Deputy Minister of Agriculture, Ottawa.

agriculture, including family and hired help, was 511,000, 6.5 p.c. of the total employed labour force in Canada; this was down 24,000 from 1969 and was 170,000 fewer than in 1961. These declines, it should be noted, are mitigated by the fact that today one farmer feeds an estimated 40 people from his farming efforts; his grandfather fed about five at the beginning of the century.

Farm production was generally higher in 1970 than in 1969. The increase came mainly from larger barley, rapeseed, soybean and flaxseed crops. The 1970-71 rapeseed crop more than doubled the 1969 production, the flaxseed crop almost doubled and the soybean crop set a new production record. There were smaller increases in the potato crop and in total livestock slaughtered. Among livestock, only the hog slaughter increased—by slightly more than 1,300 head over 1969. There were reductions in the wheat, oat and apple crops.

Although production was higher, farm cash receipts declined in 1970 for the third consecutive year. At \$4,108,600,000, they were \$73,500,000 less than in 1969. These receipts include all cash revenue from the sale of farm products, including Canadian Wheat Board participation payments on the previous years' grain crops, net cash advances on farm-stored grain in Western Canada, and deficiency payments made by the Agricultural Stabilization Board. The drop was attributable mainly to lower returns from wheat sales and lower Canadian Wheat Board participation payments.

Farmers received 4.3 p.c. more for their livestock and livestock products during 1970. Receipts from sales of dairy products were up, and receipts from poultry and eggs were lower. Receipts from wheat, barley, oilseeds and other crops were higher but those from oats were down slightly. Farmers received 34 p.c. of their income from crop enterprises and 63 p.c. from cattle and calves, hogs and dairy products. The remainder was accounted for by sales of rye, sheep and lambs, other livestock and livestock products, forest and maple products and supplementary payments.

In 1970, farm operating expenses and depreciation charges reached a record total of \$3,582,000,000, an amount \$153,000,000 above the previous record of \$3,429,100,000 set in 1969. Taxes on owned land and buildings reached a high of \$188,800,000 in 1970. Higher wages and more hired help pushed the farm labour bill to \$339,300,000, about \$37,000,000 above 1969. Machinery expenditures reached a record \$556,200,000, which was more than \$2,000,000 above 1969 expenditures, and feed costs rose to \$620,500,000 from \$554,500,000.

Farmers continued to invest in real estate, livestock, machinery and equipment but the rate of investment followed the downward trend that began in 1967. The number of loans approved by the Farm Credit Corporation in the year ended Mar. 31, 1971 was down by nearly 30 p.c. from the previous year. Although the average size of loan approved during the year was higher at \$27,985, the total amount of loans approved recorded a decrease of 28 p.c. at \$115,213,300. There was a significant decrease in the amount of funds lent to buy land to enlarge farm units and a corresponding increase in the percentage of funds used to make improvements to land, to buy livestock and to pay debts. These trends reflected the response of farmers to their marketing and economic situation during the year.

It is expected that farms will continue to increase in size but decrease in number during the remainder of the 1970s. More farms will likely be organized as two-man or three-man operations and capital and credit requirements per farm will increase significantly. Growing population and higher incomes are expected to create strong domestic markets for food and other farm products, particularly beef, pork and poultry, and also to increase the demand for fruits, vegetables and cheese. However, the proportion of disposable income used to buy food will probably continue its downward trend. In 1969, only about 15 p.c. of income was so used.

### **Agricultural Highlights in 1971**

Early in 1971, the Canadian Dairy Commission and the Quebec and Ontario milk marketing agencies signed an agreement designed to give the dairy industry new impetus toward solving its problems; the agreement brought into effect a market-sharing quota system for industrial milk in Ontario and Quebec, the provinces that, together, produce

80 p.c. of the Canadian total. It was also announced that *Canadex*, a technical information system providing agricultural extension specialists with up-to-date information about Federal Government agricultural activity, was in operation within the Canada Department of Agriculture; a new strawberry variety, *Totem*, had been developed for use in the northwest Pacific region; a new oat variety, *Random*, had been licensed; and that the wild garlic weed had been found for the first time in Canada at two locations in Ontario.

At the beginning of February, the Minister of Agriculture announced that the Canadian Dairy Commission would increase its purchase prices on skim milk powder and cheddar cheese. These increases, the first in four years, were designed to permit improved market prices to producers for manufacturing milk. Also in February, it was announced that federal assistance would be given to the British Columbia apple industry, hard hit by storage losses on the 1969 crop. Amendments were made to the Crop Insurance Act extending coverage to all land that cannot be seeded or planted because of excess ground moisture, weather or other agricultural hazards. A new alfalfa variety, *Dryland*, was released, and the *Elite* seed potato program, designed to provide the greatest possible freedom from bacterial ring rot and virus diseases of potatoes, went into full operation. Later in the month, the Government unveiled a three-year, \$40,000,000 program offering grain producers in the Prairie Provinces \$10 an acre to switch crop and summerfallow acreage into forage production. At the same time, the effective date for the new Canada Grain Act, passed by Parliament late in 1970, was set at Apr. 1; this Act enables the Governor in Council to revise grain grades after advance notice, and allows for a greater degree of flexibility within the grain-handling industry. Changes were also announced in regulations to prevent the spread of two livestock diseases into Canada from the United States—anaplasmosis and bluetongue.

On the first of March, the initial prices to be paid by the Canadian Wheat Board for purchases of wheat, barley and oats for the 1971-72 crop year were announced. This was the first time such announcement was made in advance of spring seeding and it was done to assist farmers with their long-range plans. At the same time, a newsletter was sent to all Canadian Wheat Board quota delivery permit holders, setting out the prospects for marketings in the coming year and estimating the minimum quotas likely to be established for wheat, barley and oats in the 1971-72 crop year, as well as acreage guidelines for the major crops. Also in March, a new durum wheat, *Wascana*, a new creeping red fescue variety, *Durlawn*, and *Mayak*, a new Russian wild ryegrass variety, were released. Three Canada Department of Agriculture scientists won the top award in food engineering at an international competition in Paris, France; their winning entry was a product that packs the full flavour and aroma of apple juice into a powder.

At mid-month, revised proposals to stabilize cash receipts for Prairie grain farmers were tabled in the House of Commons. First outlined in October 1970, these proposals were modified following discussions with farmers, farm organizations, and Prairie Province governments. In late March, the federal Minister of Agriculture met with the provincial Ministers of Agriculture to discuss a proposed nationwide farm adjustment program, which would assist farm people to develop commercially viable farm businesses and help other farm people to take advantage of non-farm income, employment and retirement opportunities. A March "mini outlook" was prepared by the Department's Economics Branch which forecast a "generally bright" agricultural picture for 1971-72. Details of the Feed Freight Assistance program were announced for the year commencing Apr. 1. Rates of assistance were maintained for 1971-72 at the same level as in 1970-71 in most areas of Eastern Canada and British Columbia. Changes were announced for those areas where sufficient grains are produced to meet the requirements of livestock and poultry feeders.

On Apr. 1, there was a drop in interest rates paid by farmers for Farm Credit Corporation loans to  $7\frac{1}{4}$  p.c. on long-term mortgage loans, a drop of  $\frac{3}{4}$  p.c. from the rate of the previous six months. Further research confirmed the Canada Department of Agriculture decision to permit continued use of the weed killer 2,4,5-T to control brush on rangeland, forests and rights-of-way, while suspending recommendations for use on lawns and recreational areas. *Kane*, a new high forage yielding alfalfa, and *Tempest*, a new buckwheat

Cattle raised on a foothills ranch in southern Alberta are moved to a feedlot near Fort Macleod. It took 18 hours to drive this herd over the ten-mile route.

variety, were licensed, as were two new rapeseed varieties, *Span* and *Zephyr*. A Canada Agriculture scientist at Lethbridge announced his development of a green-shell bean, which could replace imported lima beans used in Canadian frozen vegetable packs and canned soups. A new research institute, the Chemistry and Biology Research Institute, was formed to replace the Cell Biology Research Institute and the Analytical Chemistry Research Service of the Department.

At the end of April, a Bill was placed before Parliament which would provide for the discontinuance of the Prairie Farm Assistance Act levy on all grain marketings after July 31, 1971, since the extension of crop insurance to all areas of the Prairies would do away with the need for such levy. Later (mid-July), the Minister of Agriculture stated that the Prairie Farm Assistance Regulations were being amended to suspend, temporarily, the collection of the 1-p.c. levy on sales of grain marketed by western farmers. This suspension was made effective Aug. 1, pending final disposition of the legislation before Parliament to discontinue the levy and phase out of PFAA by the end of the 1972-73 crop year.

In mid-May, plans were announced for the expansion of the Canada Agriculture Research Station at Lennoxville, Que.

In early June, details were announced of a purchase program to stabilize egg prices by which the Agricultural Products Board would buy eggs by weekly tender and process them into products such as mélange and powder. The intent of the plan was to give assistance to egg producers who had been receiving very low prices as a result of increased egg supplies and disruptive marketing practices. In mid-June, the new \$3,600,000 Canada Agriculture Research Station at Ste. Foy was officially opened. This is the largest federal agricultural research station in Quebec and deals mainly with the breeding and improvement of cereal and forage crops.

At the beginning of July, it was announced that a new variety of winter wheat, *Sundance*, had been licensed and that a new pear variety, *Sierra*, had been developed for home gardens. On July 9, it was announced that import permits had been issued to 569 applicants to import 896 cattle into Canada from Europe during 1971. For the first time, cattle from Germany and Austria were eligible under the program; as in other years, cattle importations were permitted from France, Switzerland and Italy. Semen from five of Finland's best Ayrshire bulls was imported during the summer and offered to owners of about 70 Canadian Ayrshire herds as part of a long-term project to evaluate the relative merits of Finnish and Canadian Ayrshire bulls. This was a large and ambitious project that could have a significant impact on the future of the Ayrshire dairy breed in this country.

At the end of July, new import requirements were announced to prevent the importation into Canada of horses infected with swamp fever.

On Aug. 16, increases were announced in the support prices for butter, skim milk powder and cheese. The support prices for butter and cheddar cheese went up three cents and that for skim milk powder two cents. *Mayak*, the second variety of Russian wild ryegrass released by the Canada Agriculture Research Station at Swift Current, Sask., was licensed.

On Sept. 1, the Minister of Agriculture held a meeting with representatives of national farm organizations, national commodity groups, food processing councils and other interested parties to discuss the United States surtax on certain Canadian agricultural products. A new soft white winter wheat variety, *Fredrick*, was licensed for sale in Canada. It was announced that five new tomato varieties and two new apple varieties had been developed by Canada Agriculture scientists.

On Oct. 1, the Minister of Agriculture announced approval of plans to assist distributors and producers of unprocessed agricultural products affected by the surtax, the programs to be developed on a commodity basis by the Agricultural Stabilization Board. The first action taken under this program was the announcement in mid-October of a turkey purchase program, under which the Board was authorized to purchase turkey to be canned and forwarded to the World Food Programme.

In mid-October, the Minister of Agriculture withdrew the proposed Bill to stabilize cash receipts for Prairie grain farmers. Payments were made to the Canadian Wheat Board and wheat producers under the Temporary Wheat Reserves Act.

On Oct. 19, it was announced that construction would start immediately on a new \$11,500,000 laboratory for animal diseases research, to be located in the Department's Greenbelt Farm, south of Ottawa.

In mid-October, it was announced that a patent had been applied for a formula developed by scientists at the Canada Agriculture Plant Research Institute that would improve the water uptake of cut roses, thus extending their life. During the elapsed months of 1971, Japan became the leading customer for Canadian honey, the result of an aggressive sales effort by the Canadian honey industry and help from the Federal Government in the form of analytical quality tests. It was also announced at mid-month that Canadian exports of dairy and beef cattle semen sky-rocketed during 1970; the number of vials exported increased by more than 475,000 over 1969 and the value by over \$6,000,000.

On Oct. 20, details of a major loan program for the construction of buildings and facilities by exhibition commissions were released. The program was part of the Federal

Government's program of economic stimulation and provided \$10,000,000 to stimulate construction during the winter of 1971-72. The loans were for multi-purpose buildings to be used year-round for a variety of community activities.

On Dec. 6, a \$150,000,000 small farms development program was announced to assist the small farmer who wants to stay in farming but lacks sufficient acreage to develop a profitable business. Through a land transfer program, farmers will be able to use special credit facilities to buy the land they require and technical assistance will be provided under a federal-provincial agreement. The program will also benefit those farmers who choose to give up farming. Those who sell small farms will qualify for an adjustment grant to be added to the selling price of their land but they will have the option of retaining their farm home and an appropriate surrounding piece of land if they so wish.

## Section 2.—Federal Government in Relation to Agriculture\*

The Canada Department of Agriculture dates from Confederation in 1867. It was established as an outgrowth of the Province of Canada's Bureau of Agriculture, which was set up in 1852. The Department's authority lies in the British North America Act, 1867, which states, in part, "in each province, the legislature may make laws in relation to agriculture in the province" and "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada, and departments of agriculture headed by provincial Ministers were also set up by the provincial governments. In the Yukon and Northwest Territories, agriculture is of very minor importance and is administered by the federal Department of Indian Affairs and Northern Development.

### Subsection 1.—Services of the Canada Department of Agriculture

Activities of the Canada Department of Agriculture (CDA) cover three broad areas: research, promotional and regulatory services, and assistance programs. Research aims at solving practical farm problems, by applying fundamental scientific research to all aspects of soil management, agricultural engineering, and crop and animal production. Promotional and regulatory services attempt to control and eradicate crop and livestock pests, and register chemicals and other materials used for these purposes. Also included are inspection and grading of agricultural products and the establishment of crop and livestock improvement policies. Assistance programs cover some of the sphere of price stability, emergency relief, crop insurance, compensation, and income security in the event of crop failure.

The Department has five main programs—Administration (including Economics), Research, Production and Marketing, Health of Animals, and the Canadian Grain Commission (see Index). Its organization also includes a number of smaller units—the Agricultural Stabilization Board (p. 536), the Agricultural Products Board, Crop Insurance (p. 537), and the Prairie Farm Assistance Administration (p. 541). The Canadian Dairy Commission (p. 537) and the Canadian Livestock Feed Board (p. 542) operate independently but are closely allied with the Department and are directly responsible to the Minister of Agriculture. The Farm Credit Corporation (p. 540) is a Crown agency which also reports to Parliament through the Minister of Agriculture.

**Research Branch.**—The Research Branch is responsible for research on agricultural production problems although some phases of research are carried on by the Economics

\* Prepared (August 1971) under the direction of S. B. Williams, Deputy Minister of Agriculture, Ottawa.

Branch (p. 534), the Health of Animals Branch (p. 533), and the Grain Research Laboratory of the Canadian Grain Commission (p. 533). The activities of the Branch are carried out at 26 Research Stations, 10 Experimental Farms, eight Research Institutes and two Research Services, and at a number of substations and project farms in all 10 provinces and in the Yukon and Northwest Territories. The headquarters of the Branch are in Ottawa where the Executive provides general direction and co-ordination of the program. Approximately 800 professional staff are employed, representing most of the biological and physical sciences that can contribute to the solution of agricultural production problems.

The total program of the Branch is problem-oriented, with specific objectives and goals for the Branch as a whole and relevant objectives and goals for each establishment. With the increasing complexity of modern agricultural production and the competitive pressures that exist, efficiency and reduced cost per unit of production become increasingly important. Therefore, emphasis in the research program continues to be on development of improved varieties of plants and animals, on production practices that will maximize yields and reduce costs, and on methods of controlling insects, diseases and weeds that lower production.

Through the years, the Research Branch plant breeders have produced new varieties of cereal, forage and horticultural crops to meet new market requirements and reduce the hazards of production. Thus, the search has continued for even better material to overcome the limiting factors of a northern climate including a short growing season, frost hazards, drought, insect pests and diseases. At the same time, efforts have been made to develop plants that will respond favourably to long days and the high light intensity of many parts of Canada. As an aid in identifying climatic effects on crops and providing a basis for forecasting possible success with new crops in an area, agrometeorology has become an increasingly important factor. Particular attention has been given in recent years to new crops and outstanding success has been achieved in the development of new varieties of rapeseed with oil quality-tailored to specification. More than 80 new varieties of crops have been developed and put into commercial production in the past 10 years, including almost all of the cereal crops produced in Western Canada.

Feed grains and forage crops have received particular attention to provide for feeds as a basis for economical livestock production. The application of genetics to animal improvement and the increasing of knowledge of the nutritional requirements of animals have been the two main activities in direct support of improved livestock production. More recently, increasing emphasis has been given to developing procedures for improved reproductive efficiency of all classes of stock, since low reproductive rate is a seriously limiting factor. Emphasis is also being given to the disposal of animal wastes, a problem that is increasing in severity with the development of larger livestock concentrations.

The battle to control crop diseases and pests is being fought aggressively. Although chemicals have proved to be a potent weapon, their contribution to the total pollution problem has caused particular concern and methods of biological control are therefore receiving increased attention. The development of resistant varieties, the use of parasites and predators, and the destruction of insects by non-chemical means are all in the arsenal of the research workers. In this, as in most other aspects of agricultural research, the team or inter-disciplinary approach is being used more and more.

Increased output per man, in which agriculture has made outstanding advances in the past quarter-century, has been made possible through farm mechanization on a large scale. To assist in continuing this advance, the Branch has expanded its agricultural engineering staff to deal with specific problems and to provide for strengthened liaison with universities and provincial extension officers. The Branch conducts a continuing soil survey in all provinces in co-operation with provincial departments of agriculture and with faculties of agriculture in universities and also conducts an extensive program of research on soil fertility and cultural practices, working toward the objective of using the agricultural soils most effectively and of conserving them for the future.

Scientists at the new CDA Research Station at Ste. Foy, Que., are also concerned with breeding and improvement of crops; this ultra-modern research structure contains laboratories for research on plant physiology, biochemistry, phytoprotection, genetics, plant breeding and soils.

In addition to independent research done by the Branch staff, considerable co-operative work is undertaken with staff of agricultural faculties and provincial governments. Furthermore, through operating and extramural grants, support is given to research workers at the universities. Close liaison is maintained with these agencies to avoid unnecessary duplication of programs and special attention is given to maintaining contact with provincial extension officers. Branch establishments across the country are represented on provincial committees concerned with making recommendations on crop varieties, fertilizers, cultural practices, pest control, animal management, and other problems. Such collaboration ensures that research results of immediate practical value are made available to extension officers and to producers as quickly as possible.

**Grain Research Laboratory.**—The amended Canada Grain Act passed in 1970 established the Canadian Grain Commission, the function of which is to “undertake, sponsor and promote research in relation to grain and grain products and, in so doing, ... maintain an efficient and adequately equipped laboratory”. The Grain Research Laboratory provides the scientific services required in the administration of the Canada Grain Act, conducting a comprehensive program of basic and applied research relating to the quality of Canadian cereal grains. It carries out extensive studies annually of the quality of the new crop cereals and maintains a continuous check of the quality of cereal grains as they move forward from the farm to marketing positions.

With the introduction of the protein factor in segregating wheat grades, the laboratory extended and decentralized its protein-testing facilities, and is now able to test samples drawn from carlots of wheat and make the results known to the terminal elevator operators prior to unloading cars at the terminals.

The Laboratory also assists in testing the quality of cereals developed by plant breeders, in order to ascertain whether or not the variety is worthy of licensing.

**Health of Animals Branch.**—This Branch administers the Animal Contagious Diseases Act, the Meat Inspection Act and the Humane Slaughter of Food Animals Act, and operates laboratories for the study of animal diseases. Contagious diseases of animals are controlled through preventive measures of inspection and quarantine of imported

livestock and restricted commodities such as meat, farm products and other possible sources of infection; through conducting disease eradication programs, notably of bovine tuberculosis, brucellosis and Johne's disease; through the control and eradication of serious animal diseases when outbreaks occur; and through inspection and certification as to health of livestock for export.

The Animal Pathology Division consists of the Animal Diseases Research Institute at Hull, Que., the Animal Diseases Research Institute (Western) at Lethbridge, Alta., and seven other laboratories; these establishments conduct research and investigations on diseases of animals and produce the biological products required in the control programs of the Branch. The Division also provides diagnostic services for diseases of domestic and wild animals; provides a consultation service regarding veterinary biologics and other agents used in the control of animal diseases; and assists in training departmental officers and technicians as well as veterinarians from other lands. The Meat Inspection Division conducts ante-mortem examinations; ensures the application of strict humane slaughter regulations for all food animals; conducts continuous post-mortem examinations of animals slaughtered at packing plants in which they operate; and ensures maintenance of sanitary standards during processing of the products, accurate labelling, and the proper kind and use of ingredients and preservatives—all in an effort to guarantee the marketing of wholesome, unadulterated meats and meat food products.

**Economics Branch.**—The Economics Branch advises the Minister and senior officials of the Department on the economic implications of proposed and existing agricultural policies and programs. It is divided into three Divisions—Research, Farm Management, and Marketing and Trade—and includes an Economic Policy and Planning Secretariat. The Branch conducts research on the economics of production, marketing and resource use in agriculture. Market information on supply and demand trends and prospects is collected, interpreted and distributed throughout Canada and the world. The Branch develops and administers programs for agricultural adjustment and farm management in conjunction with the provinces; CANFARM headquarters are located in Guelph and regional research offices are located in the Maritimes, the Prairie Provinces and British Columbia.

*CDA scientists examine their plots of oat varieties grown in the Imperial Valley of southern California. Canadian plant breeders are involved in breeding programs for cereal crops in that area and in the Yaqui Valley of Mexico where two crops a year may be grown and development of new varieties speeded up and where they may experiment with far more breeding materials under greenhouse conditions.*

**Production and Marketing Branch.**—The Production and Marketing Branch conducts many of the promotional and regulatory functions of the Department. Six specialized divisions administer legislation and policies in the production and marketing of livestock, poultry, fruits and vegetables, dairy products and plant products, and policies in connection with the control of disease in plants.

The *Livestock Division* administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics. The *Poultry Division* carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products. The *Fruit and Vegetable Division* administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of inter-provincial and international dealers and brokers who deal in fresh fruits and vegetables. The *Dairy Division* administers legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The *Plant Products Division* administers Acts and regulations respecting seeds, feeds, fertilizers and pest-control products, conducts field inspections and maintains regional testing laboratories. The *Plant Protection Division* is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

**Administration and Information.**—The Financial and Administration Branch provides central advisory and specialized staff services for the financial and business management of the Department and advises the Senior Executive in developing financial and administrative policies and programs. Personnel policies and programs for approximately

A botanist evaluating new cultivars of tall bearded iris at the Central Experimental Farm in Ottawa. The study of ornamental horticulture is included in the Plant Research Institute's endeavour to increase knowledge of plants and their response to the environment in which they grow.

10,000 employees of the Department, including scientific and professional groups, technical, administrative and other support staff at various locations across Canada, are conducted by the Personnel Administration Branch.

The Information Division gathers and disseminates information on the research, development and regulatory work of the Department, giving service to the news media, to agricultural extension workers and directly to the public through publications, press and radio releases, television material, motion pictures and exhibits.

### Subsection 2.—Farm Assistance Programs

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, programs designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Assistance Act (p. 541) to mitigate the effects of crop failure, Feed Grain Assistance Regulations (p. 542) to assist in the movement of western feed grains to Eastern Canada and British Columbia, and other programs recently transferred to the new Department of Regional Economic Expansion—the Maritime Marshland Rehabilitation Act to save valuable soil in the Maritime Provinces, and the Prairie Farm Rehabilitation Act (p. 519), concerned primarily with combating drought in the agricultural areas of the Prairie Provinces.

Although much has been accomplished and is still being accomplished by these measures, changes in the past two decades have dictated the need for a different approach to some problems. Large-scale mechanization and, in some segments of the industry, automation reduced manpower requirements very significantly; the number of farms declined but the size of farms increased; marketing and income problems took different forms; and a decline in some rural communities occurred together with problems of increasing regional disparity. Legislation enacted to meet these situations includes price support (Agricultural Stabilization Act), dairy market and producer income stabilization (Canadian Dairy Commission), crop insurance (Crop Insurance Act), Agricultural and Rural Development Act (ARDA) and Fund for Rural Economic Development (FRED), feed grain assistance (Livestock Feed Assistance Act) and credit facilities (Farm Improvement Loans Act, Farm Credit Act and Farm Syndicates Credit Act). These measures, with the exception of the ARDA and FRED programs (see Chap. XXIII, Sect. 7, Subsect. 2) are administered by the Department of Agriculture.

The latest form of farm assistance to be initiated is the Small Farms Development Program, announced Dec. 6, 1971 (see p. 543).

**Agricultural Stabilization Act.**—The Agricultural Stabilization Act, 1958 (RSC 1970, c. A-9) established the Agricultural Stabilization Board and repealed the Agricultural Prices Support Act, 1944. The Board is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support, at not less than 80 p.c. of the previous 10-year average market or base price, the prices of nine commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the Prairie areas as defined in the Canadian Wheat Board Act). Other commodities may be supported at such percentage of the base price as may be approved by the Governor in Council. Since the Act came into force, the following farm products, other than the nine named commodities, have been supported at one time or another:

honey, potatoes, soybeans, sunflower seeds, sugar beets, tobacco, turkeys, apples, peaches, sour cherries, apricots, raspberries, asparagus, tomatoes, milk for manufacturing and skim milk powder. The Board may stabilize the price of any product by an offer-to-purchase, by a deficiency payment, or by making such payment for the benefit of producers as may be authorized.

In stabilizing prices of certain commodities by means of assistance payments, the price stabilization program has been assisting the agricultural industry to make production adjustments from a position of excessive supply to one of more normal relationship between supply and demand. During the period of adjustment, the Board guarantees a minimum average return to producers for their product on a national average basis.

The cost of stabilization programs under the Act has averaged approximately \$83,000,000 a year. The Board has available a revolving fund of \$250,000,000, according to the Act. Losses incurred are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. An Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations assists the Board in its operations.

**Canadian Dairy Commission Act.**—The Canadian Dairy Commission was established by the Canadian Dairy Commission Act, 1966 (RSC 1970, c. C-7) and became operative on Apr. 1, 1967. The affairs of the Commission are directed by three Commissioners, and its objects are “to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality”.

To perform its functions, the Commission is authorized to stabilize prices of major dairy products through offers to purchase at fixed prices, thus establishing stable prices in the interests of both producers and consumers. The Commission may borrow from the Minister of Finance the funds required for such purchases to a maximum of \$100,000,000, which must be repaid.

The Commission administers the payment of funds provided by the Government for subsidies to producers of milk and cream used in the production of dairy products. These payments supplement returns to producers from the market and permit market prices to be kept at reasonable levels. The total quantity of milk and cream on which subsidy is paid is related to the volume required to serve the Canadian domestic market. Each producer is given a quota for the amount for which he is eligible for subsidy. The Commission, indirectly, pools returns to producers from products sold on the domestic and export markets through an export equalization fund. Money for this is deducted from the subsidy except in provinces (Ontario and Quebec at present) that have established market-sharing quotas for producers. In those provinces, the deduction is made from the producers' market payments and the money remitted to the Commission. The funds are used to equalize export prices with domestic prices, for any surplus products that must be exported below domestic prices.

**Crop Insurance Act.**—To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959 (RSC 1970, c. C-36). This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage.

Under the Act and amendments of 1964, 1966 and 1971, the Federal Government will pay 50 p.c. of the administrative costs incurred by a province and 25 p.c. of the amount of

premiums required to make the scheme actuarially sound. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which indemnities required to be paid under policies of insurance exceed the aggregate of the premium receipts for that year, the reserve for the payment of indemnities, and \$200,000. As an alternative to such loans, the Federal Government may re-insure a major portion of the provincial risk in a program operated under the Crop Insurance Act. Farmers insured under the Act are not eligible for payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

In the year ended Mar. 31, 1971, 53,403 farmers purchased \$116,671,000 worth of insurance coverage for their crops under 82 different crop insurance plans. Premiums charged totalled \$8,747,585 (including the federal share) and indemnities paid out were approximately \$6,600,000 as compared with \$17,500,000 in 1969. The number of farmers who purchased crop insurance in 1970 was 14 p.c. less than in 1969 and the insurance coverage was 28.5 p.c. less than in 1969. The main reduction in participation occurred in the Provinces of Alberta, Saskatchewan and Quebec. In 1970, the Federal Government instituted a program to reduce the 1970 acreage seeded to wheat in the spring wheat area of Western Canada. As a consequence, wheat acreage was reduced by 12,000,000 acres from the preceding year. In Alberta and Saskatchewan, where wheat is the main crop, this reduced the number of crop insurance purchasers by 21 p.c. and the amount of insurance coverage by 48 p.c., compared with 1969. In 1970, crops were generally above average across Canada. The major crop losses, which occurred in isolated areas, were due to hail storms in the Prairie grain area, excess moisture in certain areas of southeastern Manitoba and excess moisture during the harvest period in Ontario and the Maritime Provinces.

**Farm Improvement Loans Act.**—The Farm Improvement Loans Act (RSC 1970, c. F-3), administered by the Department of Finance, is designed to facilitate the availability of credit by way of loans made by the chartered banks and other lenders designated by the Minister of Finance to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electrical system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling, and the purchase of additional land for the purpose of farming. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions, usually for three-year periods. The current extension is for the period July 1, 1971 to June 30, 1974. The maximum repayment period for land purchase is 15 years and for all other purposes 10 years. The interest rate is prescribed in the regulations and is adjustable semi-annually on Apr. 1 and Oct. 1 of each year to reflect changes in the levels of interest rates generally. The borrower is required to provide from 10 p.c. to 25 p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each lender against loss sustained an amount of up to 90 p.c. of the first \$125,000 lent, up to 50 p.c. of loans in excess of \$125,000 but not exceeding \$250,000 and up to 10 p.c. of loans in excess of \$250,000 made by that lender during a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at \$900,000,000 which may be lent by the chartered banks and a limit of \$300,000,000 which may be lent by other designated lenders. By Dec. 31, 1970, 4,253 claims amounting to \$3,807,985 had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one fifth of 1 p.c. after recoveries have been taken into account. The maximum loan or amount that may be outstanding to a borrower at any one time stands at \$25,000.

**Prairie Grain Advance Payments Act.**—This Act, which came into force on Nov. 25, 1957 (RSC 1970, c. P-18) and was amended in 1958, 1968, 1969 and 1971, provides for interest-free advance payments to producers in Western Canada for farm-stored threshed grain (wheat, oats and barley). The rate of advance payment per bushel for wheat, oats and barley is prescribed by regulation each year. The rate approximates two thirds of the initial payment on the grade of each grain which it is estimated will be delivered in the greatest volume by producers to country elevators during the crop year. The maximum total advance is governed by quota levels also prescribed by regulation and may not exceed \$6,000 for any individual producer for the crop year. The rate of repayment is the same as the rate of advance. Repayment is effected by deducting approximately two thirds of

the initial payment for wheat, oats and barley delivered subsequent to the loan until the producer has discharged his advance.

In addition to the above, the Act contains provisions for special advance payments covering unharvested grain and the drying of grain. The maximum total advances that may be obtained by producers for these items are \$3,000 and \$600, respectively.

**Farm Credit Act.**—The Farm Credit Act, 1959 (RSC 1970, c. F-2) established the Farm Credit Corporation as successor to the Canadian Farm Loan Board established in 1929. The Corporation, which is a Crown agency, reports to Parliament through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans for farmers. Under Part II the Corporation may lend up to 75 p.c. of the appraised value of the farm land and buildings taken as security, not exceeding \$40,000 for one, \$80,000 for two or \$100,000 for three or more owner-operators principally occupied in a single farming business. Under Part III loans may be made up to 75 p.c. of the appraised value of the land and chattels, not exceeding \$55,000 for one or \$100,000 for two or more qualified owner-operators in a single farm business. Special provision is made under this Part for loans up to 90 p.c. of farm assets where the owner-operator is under age 35 and the management of the farm is considerably above average. Part III loans are further secured by insurance on the life of the borrower, and his farming operations are subject to supervision by the Corporation. Similar life insurance and supervision are available to Part II borrowers on an optional basis.

Under both Parts, applicants must be at least 21 years of age and principally occupied in farming. Individual borrowers under Part III must be between 21 and 45. To qualify for more than \$55,000 under Part III, there must be at least two owner-operators under 45, or one under 35. All loans are repayable on an amortized basis within a period not exceeding 30 years. The interest rate is set by Order in Council and varies with the cost of money to the Corporation.

The Corporation has 118 field offices administered by 235 credit advisers who are responsible for informing local farmers about the services available, for pre-loan counselling on credit use, farm planning and farm management, for accepting applications and for making farm appraisals.

In addition to the amounts repaid by borrowers, funds for lending to farmers may be borrowed by the Corporation from the Minister of Finance. The aggregate amount of such borrowings outstanding at any time may not exceed 25 times the capital of the Corporation. This capital was raised by amendment to the Act in 1968 from \$40,000,000 to \$56,000,000. There were 69,050 loans to the amount of \$1,202,546,986 outstanding as of Mar. 31, 1971.

**Farm Syndicates Credit Act.**—The Farm Syndicates Credit Act, 1964 (RSC 1970, c. F-4) authorizes the Farm Credit Corporation to lend to qualified groups of farmers (referred to as syndicates). A syndicate is a group of three or more farmers, the majority of whom have farming as their principal occupation, who have signed an agreement acceptable to the Corporation with respect to the joint purchase and use of machinery, equipment or buildings which can be used profitably by them in their farming operations. Co-operative farm associations and certain farming corporations may qualify as syndicates for loans without the members entering into a formal agreement.

A syndicate may borrow up to 80 p.c. of the cost of machinery, buildings (including site and other improvements) and installed equipment suitable for joint use, to a maximum of \$15,000 per member or \$100,000, whichever is the lesser. Loans are repayable over a period not exceeding 15 years for buildings and installed equipment, and seven years for mobile machinery. The interest rate is based on the cost of funds to the Corporation, advanced by the Minister of Finance, and its expenses in servicing loans. There is an initial charge of 1 p.c. on the amount of each loan. Security is provided by a promissory note signed by each syndicate member, and such other security as may be required. Up to Mar. 31, 1971, the Corporation had approved loans for 654 syndicates totalling \$9,284,684.
